High School and Intermediate Education.—The Commission found that the deficiencies of the school system arise, in the main, from the following causes. (a) Most of the schools are under-equipped and are conducted by an underpaid and for the most part an untrained staff. (b) They are unduly dominated by the matriculation examination which is itself ill-designed and not of a sufficiently high standard. (c) Owing to the division of authority between the University and the Department of Public Instruction there is an inadequate machinery for supervising, guiding and assisting the work of the schools as a whole; in other words, a coherent system of education does not yet exist. (d) A large and vitally important part of secondary instruction is actually conducted, not by the schools but by the colleges of the University in their intermediate classes; and, because it is so conducted it largely fails of its purpose, partly because the methods chiefly employed (those of the mass lecture) are unsuitable for work at this stage, and partly because many subjects and lines of study, especially those which have a vocational bearing, are almost wholly disregarded. The Commission therefore recommended that the stage of admission to the University should be (approximately) that of the present intermediate; and that the duty of providing training at the intermediate stage should be transferred from the universities to new institutions to be known as 'Intermediate Colleges' some of which should be attached to high schools, while others might be organised as separate institutions. There should be at least one such institution in each revenue district; and the Courses should make provision for the medical, engineering and teaching professions and for careers in agriculture, commerce and industry. As the Department of Public Instruction is unable to supervise the new system, more than half the schools being outside its jurisdiction, and as

the University cannot be so organised as to be able to deal effectively with them, the Commission recommended the constitution of a Board of Secondary and Intermediate Education, consisting of university and Government representatives and including persons conversant with industry, commerce, agriculture and medicine. The Board should be empowered to define the curricula, to conduct the examinations, to grant recognition, to advise Government in the matter of grants, and to exercise control over institutions maintained out of public funds.

New Universities.—The Commission found that the numbers of students in Bengal were too great to be efficiently dealt with by a single university organisation. The undergraduate courses in arts and science are given by colleges almost entirely self-contained, in many cases widely scattered, meagrely staffed and often dependent solely on fees. The courses are too predominantly literary and too little varied to suit various needs. The teachers are usually underpaid, and have no legal security of tenure and next to no freedom in their work. The cleavage between post-graduate and undergraduate work has led to the impoverishment of undergraduate work. The resources of the mufassal colleges are insufficient to give university training; and these colleges have too slender a connexion with the University. The Commission felt that, in view of the large numbers of students and in view of the traditions of some of the colleges which should not be lightly swept aside, the University of Calcutta should not be reconstituted on a unitary basis. They therefore recommended a programme of reconstruction under which the colleges should abandon the idea of being self-contained and self-sufficient institutions and should be prepared to co-operate with one another and with the University; that the University should have effectual means to exercise a due control over the colleges by the regulations for admitting them to constituent rank, by granting recognition to their teachers, by appointing college and other teacher for giving instruction open to all students of the University, and by advising Government in regard to the grants to be made to colleges. The Commission, however, recommended that the University of Dacca should be established as a unitary, teaching university wherein all formal instruction given in the name of the University should be given by officers of the University and under the direct control of the University authorities, no collegiate organisation being interposed between these authorities and the students. The Commission also proposed that some special form of treatment was necessary for the mufassal colleges. The best solution would be that by a judicious concentration of resources a few of these colleges should be encouraged and helped gradually to develop into more highly organised and semi-independent institutions, and ultimately into distinct universities; while others would become intermediate colleges. This change, however, should not be unduly forced, especially in Bengal, where the mufassal centres are comparatively weak and where communications, except to Calcutta, are difficult. A mufassal boards under which certain mufassal centres would

be given an increasing measure of freedom and independence should therefore be constituted in connexion with the University of Calcutta.

University Organisation.—The Commission found that the governance and administration of the University were unsatisfactory and ineffective as an instrument for the encouragement of learning. The Senate has to serve as a representative assembly and at the same time to decide matters of detail appropriate to a small executive. It is neither large enough to reflect all the shades of relevant experience and opinion, nor small enough for the discussion of intricate affairs. The Syndicate is at once insufficiently representative and too accidental in its composition to decide all the problems which the insufficiently differentiated constitution of the University assigns to its care. The relations between the University and its colleges are such that, while there is no really effective means of securing the efficiency of the colleges, yet they are under an unduly rigid control which restricts their freedom of action and makes it difficult for them to show any independent initiative. The University is also loaded with administrative functions, particularly in regard to the recognition of schools which it cannot adequately perform, and which bring it into difficult relations with the educational organisation of the State. The Commission recommended (a) the constitution of a large and representative Court, including ex-officio, elected and nominated members; the Court should have the power to make Statutes, to approve the financial policy of the University, and generally to review its work, and, since so large a body could not meet frequently, it should elect a Committee of Reference to represent it in dealing with the executive Council; (b) a small Executive Council, with substantial powers of control over finance and the general policy of the University and to make Ordinances; (c) an Academic Council including the principal teachers of the University, and having large independent powers in all purely academic questions affecting courses of study, examinations and degrees; and (b) Faculties, Boards of Studies and other statutory boards. In order to give flexibility to the new system, the Commission proposed that the regulations governing the work of the Universities should be less rigid, and should be classified in accordance with the character of the subject matter. The classification should be as follows:—(a) The Act, made and alterable only by the Imperial Legislative Council; (b) the Statutes, made in the first instance by the Imperial Legislative Council, but subsequently capable of being altered or added to by the Court of the University, subject to the approval of Government; (c) the Ordinances, made by the Executive Council of the University subject to ratification by the Court, the Chancellor having the right of veto; (d) the Regulations, made by appropriate bodies in the University to which such powers are entrusted by Statute and Ordinance.

The Position of Government.—The Commission have made drastic recommendations in regard to the position of Government in the matter of education. They urge that the relations between Government and the universities are of an unsatisfactory kind, involving far too much detailed Government intervention

which cannot be satisfactorily exercised and which undermines the sense of responsibility of the university authorities. They also feel that the constitution of State Universities such as that proposed for Dacca by the Dacca Committee, would not be a wise step. The universities therefore should be, in many respects, autonomous bodies though considerable powers, especially in the constitution of selection committees for making university appointments, should be vested in the Chancellor, who should also have the right to nominate a certain number of persons to all the important university authorities. The Government should have the right to sanction or to refuse any change in, or addition to the Statutes of the University; and should be able to exercise much influence, through the giving of grants.

The Commission also held the opinion that the resources of the Government Colleges should be so far as possible available to the University as a whole. In order that these colleges should play their part in the new system and in order that this aspect of the financial responsibility of Government for university education might be clearly defined, these colleges should normally be placed near the direction of governing bodies appointed by Government.

The Commission also discussed the vexed question of Government service and contended that the advantages are more than outweighed by the disadvantages. The system is marked by undue rigidity; the distinctions between its grades arouse irritation; it gives rise to administrative inconveniences; it tends to officialise education and to centralise its organisation; and it embarrasses the privately managed institutions, because their field of choice is restricted by so large a proportion of qualified teachers being confined to schools under Government management. The Commission held that the organisation of the university branch of the educational services should be considered in connexion with a scheme of university reform. The time is at hand when the service system should be abandoned. In the new universities, therefore, appointments should be made by the university authorities. At the same time there should be safeguards against abuse (a) by providing for a special form of selection committee; (b) by providing that in the case of certain listed posts which it is desirable to fill with western-trained men of distinction, nominations should be made by special selection committees in England; and (c) by the recommendation that Government should guarantee the salary and pensions or superannuation allowances attached to these posts. In regard to the secondary and higher secondary branches of education the ultimate establishment of a professional organisation of the main teaching body should be aimed at from the outset; teachers being free to transfer their services from private to Government schools or *vice versa*, and being all participants in a general system of superannuation, managed by the Board of Secondary and Intermediate Education. In view of the need of western-trained teachers in these grades of education, a special corps of teachers and inspectors should be recruited and paid by Government (through the Board) and should enjoy full security and

pension rights. This corps may be regarded as a modified service, but with two differences: there should be no fixed or invariable hierarchy of grades; and the work of the persons so employed would not be confined to Government institutions.

Professional and Technical Education.

—The Commission found that in all these fields save law, and to a less degree, medicine, the provision now made is quite inadequate to the needs of a modern and progressive community. They urged that courses suited for the medical, engineering and teaching professions and for careers in agriculture, commerce and industry should be taught in the intermediate colleges. This should be a great advance on the present system. For the training of teachers, there should be a department of education in each university; and, in addition to the B.T. degree, education should be included as a subject (a) in one of the courses of study at intermediate colleges, and (b) in some of the groups approved for the B.A. and M.A. courses. Departments of engineering, agriculture, industries and of commerce should be instituted

in suitable places but in all these departments it is training which is most needed. As training is costly and demands elaborate equipment in nearly all vocational subjects, no course of study should be defined until there is a responsible assurance that the necessary provision of teaching and equipment is forthcoming.

The Education of Women and Girls—should be dealt with by bodies especially conversant with the needs of the interests involved. The Commission therefore recommend a standing committee of the Board of Secondary and Intermediate Education to deal with the education of girls, and a similar body in connexion with each university.

It is clear from this summary that the Commission have enunciated a bold policy of progress, and one which should fit India to meet the growing political and industrial demands upon her. Much money will be required to put their recommendations into effect; and, though it is hoped that Government will be liberal in the aid, Government grants should be supplemented by private benefactions.

Local Self-Government.

Throughout the greater part of India, the village constitutes the primary territorial unit of Government organisation, and from the villages are built up the larger administrative entities—tahsils, sub-divisions, and districts.

"The typical Indian village has its central residential site, with an open space for a pond and a cattle stand. Stretching around this nucleus lie the village lands, consisting of a cultivated area and (very often) grounds for grazing and wood-cutting. . . . The inhabitants of such a village pass their life in the midst of these simple surroundings, welded together in a little community with its own organisation and government, which differ in character in the various types of villages, its body of detailed customary rules and its little staff of functionaries, artisans and traders. It should be noted, however, that in certain portions of India, *e.g.*, in the greater part of Assam, in Eastern Bengal, and on the west coast of the Madras Presidency, the village as here described does not exist, the people living in small collections of houses or in separate homesteads".—(*Gazetteer of India*.)

The villages above described fall under two main classes, *viz.*—

Types of Villages.—"(1) The 'severalty' or *raiayatwari* village, which is the prevalent form outside Northern India. Here the revenue is assessed on individual cultivators. There is no joint responsibility among the villagers, though some of the non-cultivated lands may be set apart for a common purpose, such as grazing, and waste land may be brought under the plough only with the permission of the Revenue authorities, and on payment of assessment. The village government vests in a hereditary headman, known by an old vernacular name, such as *patel* or *reddi*, who is responsible for law and order, and for the collection of the Government revenue. He represents the primitive headship of the tribe or clan by which the village was originally settled.

"(2) The joint or landlord village, the type prevalent in the United Provinces, the Punjab and the Frontier Province. Here the revenue was formerly assessed on the village as a whole, its incidence being distributed by the body of superior proprietors, and a certain amount of collective responsibility still, as a rule, remains. The village site is owned by the proprietary body, who allow residences to the tenantry, artisans, traders and others. The waste land is allotted to the village, and, if wanted for cultivation, is partitioned among the shareholders. The village government was originally by the *punchayet* or group of heads of superior families. In later times one or more headmen have been added to the organisation to represent the village in its dealings with the local authorities; but the artificial character of this appointment, as compared with that which obtains in a *raiayatwari* village, is evidenced by the title of its holder, which is generally *lambardar*, a vernacular derivative from the English word 'number.' It is this type of village to which the well-known description in Sir H. Maine's *Village Communities* is alone applicable, and here the co-proprietors are in general a local oligarchy with the bulk of the village population as tenants of labourers under them."

Village Autonomy.—The Indian villages formerly possessed a large degree of local autonomy, since the native dynasties and their local representatives did not, as a rule, concern themselves with the individual cultivators, but regarded the village as a whole, or some large landholder as responsible for the payment of the Government revenues, and the maintenance of local order. This autonomy has now disappeared owing to the establishment of local, civil and criminal courts, the present revenue and police organisation, the increase of communications, the growth of individualism, and the operation of the individual *raiayatwari* system, which is extending even in the north of India. Nevertheless, the village remains the first unit of administration; the principal village functionaries—the headman, the accountant, and the village watchman—are largely utilised and paid by Government, and there is still a certain amount of common village feeling and interests.

Punchayets.—For some years there was an active propaganda in favour of reviving the village council-tribunal, on *Punchayet* and the Decentralisation Commission of 1908 made the following special recommendations:—

"While, therefore, we desire the development of a *punchayet* system, and consider that the objections urged thereto are far from insurmountable, we recognise that such a system can only be gradually and tentatively applied, and that it is impossible to suggest any uniform and definite method of procedure. We think that a commencement should be made by giving certain limited powers to *Punchayats* in those villages in which circumstances are most favourable by reason of homogeneity, natural intelligence, and freedom from internal feuds. These powers might be increased gradually as results warrant, and with success here, it will become easier to apply the system in other villages. Such a policy, which must be the work of many years, will require great care and discretion, much patience, and judicious discrimination between the circumstances of different villages; and there is a considerable consensus of opinion that this new departure should be made under the special guidance of sympathetic officers."

This is, however, still mainly a question of future possibilities, and for present purposes it is unnecessary to refer at greater length to the subject of village self-government. An Act was passed in 1912 to provide for the establishment of *punchayets* in the Punjab; but it was contemplated that the areas for which these bodies would be established would be larger than villages, and their functions are limited to the disposal of petty civil suits. In the Punjab, it may be mentioned, village self-government survives to a considerable extent, on a basis of custom, and the desirability of bringing it under statutory regulation has been questioned.

Municipalities.—The Presidency towns had some form of Municipal administration, first under Royal Charters and later under statute, from comparatively early times, but outside of them there was practically no attempt at municipal legislation before 1842. An Act passed in that year for Bengal, which was practically inoperative, was followed in 1850 by an Act applying to the whole of India. Under

this Act and subsequent Provincial Acts a large number of municipalities was formed in all provinces. The Acts provided for the appointment of commissioners to manage municipal affairs, and authorised the levy of various taxes, but in most Provinces the commissioners were all nominated, and from the point of view of self-government, these Acts did not proceed far. It was not until after 1870 that much progress was made. Lord Mayo's Government, in their Resolution of that year introducing the system of provincial finance, referred to the necessity of taking further steps to bring local interest and supervision to bear on the management of funds devoted to education, sanitation, medical charity, and local public works. New Municipal Acts were passed for the various Provinces between 1871 and 1874, which, among other things, extended the elective principle, but only in the Central Provinces was popular representation generally and successfully introduced. In 1881-2 Lord Ripon's Government issued orders which had the effect of greatly extending the principle of local self-government. Acts were passed in 1883-4 that greatly altered the constitution, powers, and functions of municipal bodies, a wide extension being given to the elective system, while independence and responsibility were conferred on the committees of many towns by permitting them to elect a private citizen as chairman. Arrangements were made also to increase municipal resources and financial responsibility, some items of provincial revenue suited to and capable of development under local management being transferred, with a proportionate amount of provincial expenditure, for local objects. The general principles thus laid down have continued to govern the administration of municipalities down to the present day. In several Provinces there are, besides municipalities, "notified areas," *i.e.*, small towns which are not fit for full municipal institutions, but to which parts of the Municipal Acts are applied, their affairs being administered by nominated committees. These are to be regarded as embryo municipalities.

Local Boards.—The establishment of boards for dealing with local affairs in rural areas is a relatively recent development. No such boards existed in 1858, though some semi-voluntary funds for local improvements had been raised in Madras and Bombay, while in Bengal and the United Provinces consultative committees assisted the district officers in the management of funds devoted to local schools, roads and dispensaries. The system of raising cesses on land for purposes of this description was introduced by legislation in Madras and Bombay between 1865 and 1869; in the case of Bombay, nominated committees were to administer the proceeds of the cess. The year 1871 saw a wide development of legislation for local administrative purposes, partly due to growing needs, and partly the result of the financial decentralisation scheme of Lord Mayo's Government, various Acts being passed in different Provinces providing for the levy of rates and the constitution of local bodies, in some cases with an elected element, to administer the funds. The whole system was reorganised in accordance with the policy of Lord Ripon's Government. Under the Orders of 1881-2 the existing local committees were to be replaced by a system of boards

extending all over the country. The lowest administrative unit was to be small enough to secure local knowledge and interest on the part of each member of the board, and the various minor boards of the district were to be under the control of a general district board, and to send delegates to a district council for the settlement of measures common to all. The non-official element was to preponderate, and the elective principle was to be recognised, as in the case of municipalities, while the resources and financial responsibilities of the boards were to be increased by transferring items of provincial revenue and expenditure. It was, however, recognised that conditions were not sufficiently advanced or uniform to permit of one general system being imposed in all provinces, and a large discretion was left to Local Governments. The systems introduced in different parts of India by the Acts of 1883-5 (most of which are still in force) consequently varied greatly.

Mofussil Municipalities.—The total number of municipalities has altered little for many years past. New municipalities have been formed from time to time, but there have also been removals from the list. There was, indeed, a rather marked decrease according to the last decennial review (1902-12) and the number in 1911-12 was actually less than it was thirty years earlier. This result was brought about by the reduction to "notified areas" of a considerable number of the smaller municipalities in the Punjab and United Provinces. The figures showing the constitution of the municipalities call for little comment. Taking them as a whole, the proportion of elected members was in 1911-12 rather more than a half, whereas in 1901-02 it was slightly less. The proportions of non-officials and Indians, already high in 1901, also increased during the decade. Elected members are in the majority in the cities of Bombay, Madras and Rangoon and in Bengal (excluding Calcutta), Bihar and Orissa, the United Provinces, and the Central Provinces; in the North-West Frontier Province and Baluchistan, on the other hand, there are no elected members, and in Burma they form a small minority. Non-officials outnumber officials everywhere, and Indians outnumber Europeans to an even greater degree, except in Rangoon. Taking the municipalities individually, some of the commissioners are elected in the great majority of cases. Representation in the larger municipalities is in general by wards or classes of the community, or both. Voters must be residents not below a specified age, and property or status qualifications are generally laid down. The Chairman or President of the Municipal Corporation is sometimes nominated under the orders of the Local Government, but more often chosen by the commissioners from among themselves. The only provinces in which there has been in the past a large proportion of elected non-official chairmen are Madras, the Central Provinces, and the two Bengals; but Bombay has now to be added to the list, in view of the changes made in that province in the closing years of the decade. Various provisions exist as to the exercise of control by Government, particularly as regards finance and appointments. No loans can be raised without Government sanction, and generally speaking municipal budgets, and alterations in taxation, require the sanction of the Local

Government, or if a Commissioner. Proposals for giving municipal committees a larger degree of independence were put forward by the Decentralisation Commission, and some action on these lines has been taken. Government may provide for the performance of any duty which the commissioners neglect, and may suspend them in case of incompetence, default, or abuse of powers.

Municipal Revenues.—In the provinces in which octroi is levied generally, it is the most important source of income. The octroi duties have admitted disadvantages, but they are familiar through long usage to the inhabitants of the North and West of India. The possibility of abolishing them was under consideration during the last decade, and it was decided in the United Provinces to take this step in many municipalities, but the alternative of direct taxation is not a popular one. Precautions are taken to limit the tax to articles actually consumed in a town, and to prevent it from becoming a transit duty. The list of dutiable articles contains in each case only staple articles of local consumption and goods in transit are allowed to pass in bond or receive a refund of the duties on leaving the town. Articles of food are the most important class of goods subject to octroi taxation.

Incidence of Taxation.—A tax on houses and lands is levied to some extent in all provinces, and is the main source of municipal revenue where there is no octroi. Taxes on professions and trades, and on animals and vehicles, are generally levied, as also is a water-rate in the large towns that have been

furnished with water works. Tolls on roads and ferries and lighting and conservancy rates contribute to the receipts in most provinces. The average incidence of municipal taxation per head of municipal population in 1911-12, for British India, as a whole, was Rs. 2.95. Leaving out of account the Presidency towns, where the figures are higher, the provincial averages ranged from Rs. 3.08 in the North-West Frontier Province and Rs. 2.38 in the Punjab, to Rs. 1.35 in Madras and Rs. 1.02 in Coorg. Other sources of revenue are municipal lands and buildings, conservancy receipts (other than the rates), educational and medical fees, receipts from markets and slaughter-houses (a very important item in Burma), and interest on investments.

Municipal Functions.—Municipal functions are classified under the heads of public safety, health, convenience and instruction. Within these heads the duties are many and varied. Expenditure, apart from that on general administration and collection, which amounts to something less than 10 per cent. of the total, is similarly classified. The principal normal functions of municipalities now are the construction, upkeep, and lighting of streets and roads, and the provision and maintenance of public and municipal buildings; the preservation of the public health, principally with reference to the provision of medical relief, vaccination, sanitation, drainage and water-supply, and measures against epidemics; and education, particularly primary education. Money is raised by loan for water-supply and drainage schemes, the cost of which is too large to be defrayed from ordinary revenues.

THE PRESIDENCY TOWNS.

The corporations of the Presidency towns occupy a special position, and are constituted under special Acts.

Calcutta.—The municipal administration of Calcutta is regulated by the Calcutta Municipal Act of 1899, which replaced an Act of 1888, the working of which had not been altogether satisfactory. The Corporation, as remodelled by the Act of 1899, consists of a Chairman, appointed by the local Government, and fifty commissioners, half of whom are elected at triennial ward elections, while the remainder are appointed, four each by the Bengal Chamber of Commerce and the Calcutta Trades Association, two by the Port Commissioners, and fifteen by the local Government. The Act also constitutes a smaller body, the General Committee, consisting of the Chairman with twelve of the commissioners, four elected by the ward commissioners, four elected by the other commissioners and four appointed by the local Government. There are various special committees and sub-committees. An amending Bill has been published.

The entire executive power is vested in the Chairman, to be exercised subject to the approval or sanction of the Corporation or General Committee, whenever this is expressly directed in the Act. To the Corporation are reserved the right of fixing the rates of taxation and such general functions as can be efficiently performed by a large body, while the General Committee stands between the deliberative and executive

authorities, and deals with those matters that are ill-adapted for discussion by the whole Corporation but too important to be left to the disposal of the Chairman alone. Power is reserved to the local Government to require the municipal authorities to take action in certain circumstances, and their sanction is required to large projects.

Bombay.—The municipal corporation of Bombay, which formed the model for the new Calcutta constitution, dates in its main features from 1872 and continues to be regulated by the Act of 1888 as amended. Some important changes were made by the City of Bombay Police Charges Act of 1907, which relieved the corporation of the police charges of the city, and made over to them in exchange further responsibility for primary education, medical relief and vaccination.

The Corporation consists of 72 councillors, of whom 36 are elected by wards, 16 by the justices of the peace, 2 by the Fellows of the University, and 2 by the Bombay Chamber of Commerce, the remaining 16 being appointed by Government. The general municipal government is vested in the Corporation, while the ordinary business is transacted by a Standing Committee of 12 councillors, 8 appointed by the Corporation and 4 by Government. The president of the corporation is elected by the councillors but is not, like the chairman of the Calcutta Corporation, an executive officer. The

chief executive authority is vested in a separate officer, appointed by Government, usually from the ranks of the Indian Civil Service, styled the Municipal Commissioner, who can, however, be removed by a vote of 45 councillors.

Madras.—A new Municipal Act for the City of Madras was passed in 1904. By this Act the number of the municipal commissioners, to whom as a body the name Corporation was now applied, was increased from 32 to 36, besides the President, and provision was made for the appointment of three commissioners each by the Madras Chamber of Commerce and the Madras Trades Association, and of two by such other associations, corporate bodies, or classes of persons, as the Local Government might direct, while the number to be elected as divisional elections was fixed at 20. Under the Act previously in force the total number of elected commissioners was not more than 24. The

remaining commissioners were appointed, as they are under the new Act, by the Local Government, who also appoint the President. The Act of 1904 also introduced various other changes in the law which need not be specially noticed; it was modelled to a large extent on the Calcutta Act of 1899. Executive authority is vested in the President, who is removable under the existing law, by a vote of 28 commissioners. A Standing Committee, consisting of the president and eight other commissioners, is mainly concerned with financial and building question. The President, like the chief executive officers in Calcutta and Bombay, is usually a member of the Indian Civil Service. The number of persons enrolled as voters in 1911-12 was 9,824 rather more than 6 per cent. of the total adult male population. The control of the Local Government over the municipality has hitherto been more stringent than in the other Presidency towns.

DISTRICT AND LOCAL BOARDS.

The duties and functions assigned to the municipalities in urban areas are in rural areas entrusted to District and Local Boards. The systems of rural local government in the various provinces differ widely. The Madras organisation, which provides for three grades of local boards, most nearly resembles the pattern set in the original orders. Throughout the greater part of that province important villages and groups of villages are organised as "Unions", each controlled by a PANCHAYAT. These bodies receive the proceeds of a light tax on houses, and spend them mainly on sanitation. Next come the Taluk Boards, which form the agency for local works in the administrative sections into which the districts are divided. Finally, there is the District Board, with general control over the local administration of the district. In Bombay there are only two classes of boards, for districts and TALUKAS respectively. In Bengal, the Punjab, and the North-West Frontier Province the law requires a District Board to be established in each district, but leaves the establishment of subordinate local boards to the discretion of the Local Government. The Bengal Act authorises the establishment of village Unions also, but this provision has not been very largely used. The United Provinces Act formerly in force directed the establishment of district and sub-district boards, but the latter were abolished, as mentioned below, in 1906. The system in the Central Provinces bears some resemblance to that which prevails in Madras, the villages being aggregated into "circles", and the circles into "groups", each of which has a Local Board, while for each district there is a District Council having authority over the Local Boards. In Assam district boards have not been introduced, and independent boards are established in each sub-division. Neither district nor sub-district boards exist in Burma, or in Baluchistan. District boards were started in Lower Burma in accordance with Lord Ripon's Local Self-Government Resolution of 1882, but the members took no active interest in them, and they died out after a few years. The district funds are now administered by the Deputy Commissioners of districts.

Elective Principle.—The degree to which the elective principle has been introduced varies greatly in different parts of India; but there is a considerable proportion of elected members everywhere, except in the North-West Frontier Province, where the system of election was abolished in 1903. On the whole, however, the principle of representation is much less developed in rural than in municipal areas. In Madras the elective system, previously applied to the district boards only, was extended to the Taluk Boards in 1909. In the United Provinces and the Central Provinces there is a substantial majority of elected members.

Chairmen.—The various Acts usually leave it to the Local Government to decide whether the Chairman of the district board shall be elected or nominated. In most provinces the Collector has, as a general rule, been appointed, though in the Central Provinces the president is elected, and is usually a non-official. In the United Provinces election, subject to the veto of the Local Government, was prescribed by the Act of 1906, but in practice the Collector is chosen. As regards the subordinate boards, the law and practice vary. Generally speaking, the sub-district boards are on the footing of subordinate committees or agencies of the district boards, with very limited powers and resources; but in Madras they exercise independent authority, subject to the general control of the district boards, in regard to the less important roads, primary education, medical work, and sanitation.

Provision is made, on much the same lines as in the case of municipalities, for the exercise of control in certain directions by Government or its officers.

Sub-District Boards.—The Decentralisation Commission, having in view the admitted failure of sub-district boards as a whole, under existing arrangements, except in Madras and Assam, put forward proposals for making them the principal agencies of rural board administration by giving them independent resources, separate spheres of duty, and large responsibilities. Proposals for giving the district boards a larger measure of independence were also put forward.

Revenue and Expenditure.—The sources of income open to rural boards are much narrower and less elastic than those of the municipalities. The greater part of their revenue is derived from a cess which they are empowered to levy on the land, and which usually does not exceed one anna in the rupee on the annual rent value (or, in ryatwari provinces, the Government assessment). The cess is ordinarily collected by Government agency along with the land revenue, and varies in amount with the latter. Since 1905 the income derived from the land cess has been supplemented by a special Government contribution calculated at the rate of 25 per cent. of that income. Sub-

stantial amounts, apart from this special contribution, are granted to the district boards by the Local Governments for various purposes. Apart from receipts in connection with their educational and medical institutions, and markets, the only other important sources of independent revenue are pounds and ferries, and, in Madras, road tolls. Except in Madras, the sub-district boards have generally no independent sources of income, and merely receive such moneys as the District Boards may allot to them. In Madras the Taluk Boards receive half the land cess levied in their areas, as well as certain miscellaneous revenues.

District and Local Boards.—The following table shows the general constitution of the boards in each province, with their income and expenditure in 1916-17, the latest year for which statistics are available :—

Administrations.	No. of Boards.	No. of Members.		Income.		Total Expenditure.
		Elected.	Ex-officio and Nominated.	Total.	Incidence per Head.	
				£	d.	£
Bengal	97	640	734	707,331	3 $\frac{3}{4}$	733,630

POLICY OF GOVERNMENT DEFINED.

The Government of India issued on April 28th, 1915, a long resolution dealing with the growth and future of local self-government in India. From what has gone before it will have been seen that the Decentralisation Commission made many and detailed recommendations on this question, and the intention of the resolution was to summarise policy on these points, as well as to complete the chain of pronouncements of policy which commenced with the education resolution and was followed by the sanitary resolution. Owing however to the wide diversity of conditions in India, and the extent to which local self-government must be a provincial question, it was not apparently possible to lay down broad and simple lines, especially as in the main the development of local self-government is a question of the provision of funds, and no one has suggested whence they shall come, except in the way of doles from the Imperial Exchequer, which is already overburdened. The Resolution was

therefore received with mixed feelings. Those who expected a declaration of a bold forward policy were disappointed, whilst those who realised the difficulties inherent in the working of the principle until some means of providing the necessary funds are devised realised that it went as far as possible in existing conditions.

The resolution commenced with the expression of opinion that the results on the whole have justified the policy out of which local self-government arose. The degree of success varies from province to province and from one part of a province to another, but there is definite and satisfactory evidence that of a growth of a feeling of good citizenship, particularly in the large towns. "On all sides there are signs of vitality and growth." Of the obstacles in the way of realising the ideals of the past the resolution placed in the forefront the smallness and inelasticity of the local revenues, then the indifference still prevailing in many places towards all forms of public life.

On a review, the Government of India decided to accept the view of the local-government or administration as to the degree of progress possible at the present time. Local Governments and Administrations, the resolution added, were prepared to advance in the direction of the main recommendations of the Decentralisation Commission.

Turning to details the resolution showed that of the 695 **Chairmen of Municipalities** 222 consisted of elected non-officials, 248 of elected officials, 51 of nominated non-officials, 174 of nominated officials. The election of non-official chairmen has long been urged by Indian politicians, and their views have been so far accepted that the majority of Local Governments are in favour of substituting, so far as possible, non-official for official chairmen. With regard to the larger municipalities, the Bombay system is now very much in favour. This consists in the main of a constitution under which an elected chairman is the mouth-piece of the corporation, whilst the head of the executive is an official nominated by Government but under the control of the Corporation. Whilst not pressing this system on all Local Governments, the resolution pointed out that it had the advantage of securing a continuous and strong executive administration by a paid staff, whilst maintaining the corporate control and activity of the municipal board. As to the **financial resources** of the municipalities, it was shown that the aggregate income of the 701 municipalities in existence at the close of 1912-13 (excluding the Presidency towns and Rangoon) amounted to £3,282,845, or Rs. 4,92,42,675 apart from extraordinary receipts, or an average of £4,683 or Rs. 70,245 a year. This shows a very rapid expansion. Contributions from Government have materially assisted this expansion. Since 1911, the Government of India have made grants amounting to £3,076,466 (Rs. 4,61,47,000), of which £368,200 (Rs. 55,23,000) are recurring, for urban sanitation. Municipalities have also received their share—the exact figure is not easily ascertainable—of the large educational grants made by the Government of India since 1911, amounting to about £3,987,800 (Rs. 5,98,17,000), of which £826,666 (Rs. 1,24,00,000) are recurring. Municipal boards have been relieved of all charges for the **maintenance of police** within municipal limits. In almost every province the recommendation that municipalities should be relieved from financial responsibility for famine relief and should receive assistance from Government in the case of severe epidemics, has been already given effect to, or the principle has been accepted. The Government of India have also accepted a further recommendation, namely, that assistance may legitimately be given by Government to poorer municipalities which, without it, would be unable to carry on the normal standard of administration required from them.

On the very important subject of financial control, which is sometimes described as minute the Government of India suggested that the municipalities should have a freer hand with regard to their budgets, the only check being the maintenance of a prescribed minimum balance. They held this out as the policy which should steadily be kept in view.

The Decentralisation Commission recommended that **sub-district boards** should be universally established and that they should be the principal agencies of rural administration. The Government of India left this question to the discretion of the Local Governments. The Local Governments favoured a policy where district and sub-district boards should contain a large preponderance of elected members. They took the view, in which the Government of India concurred, that an official should remain chairman of every district and sub-district board. The total number of district and sub-district boards in 1913 was 199 and 536 respectively, with an aggregate income of £3,787,219 (Rs. 5,68,08,292). In the same year they received specially large grants from the sums allotted by the Imperial Government for education and sanitation. The resolution analysed at some length the proposal that district boards should be empowered to levy a railway or tramway cess, in order to expedite the improvement of communications. The Government of India have empowered district boards to levy a special extra land cess of three pies in the rupee on the annual rent value of land for the construction of light railways or tramways, conditional on the proposal obtaining the assent of three-fourths of the members of the board. The Government of India also decided that the board could issue debentures secured on the railway property when its accumulated funds were insufficient to bear the cost of construction. They also recommended that the present restrictions on the financial powers of the boards should be gradually relaxed, in the direction of securing full discretion subject to the maintenance of the prescribed working balance.

Turning to the organisation of the **villages** the resolution expressed the views of the Government of India towards the establishment of panchayets in the following passage:—"where any practicable scheme can be worked out in co-operation with the people concerned, full experiment should be made on lines approved by the local government or administration concerned." With this general recommendation they left the matter to the local authorities. With regard to the **Presidency Corporations**, the Decentralisation Commission recommended that the Bombay system of an unofficial chairman and an official head of the executive should be generally followed. Bengal and Madras agreed generally with the proposal, but Rangoon regarded it as unsuitable to the conditions there obtaining. The Government of India declined to endorse the suggestion that a **Local Government Board** should be formed in each Province for the control of the local bodies. In conclusion, the resolution summarised the policy of the Government of India towards the development of local self-government as one of prudent boldness, calculating risks but not afraid to take them in the cause of progress.

Since this resolution was issued the Bombay Government has appointed a strong mixed committee to consider the whole question of local self-government in the rural areas, whose report is awaited with great interest.

Local Government Statistics.

Municipalities.—With this general introduction we can now turn to the statistical results of the working of Local Self-Government. The following table gives information as to the constitution of municipal committees, taxation, &c., in the chief provinces in 1917-18:—

	Population within Municipal Limits.	Number of Municipalities.	Total Number of Members	By Qualification.			By Employment.			By Race.		Incidence of Municipal Taxation per head.
				Ex-Officio.	Nominated.	Elected.	Officials.	Non-Officials.	Euro-peans.	Indians.

Sanitation.

The history of the sanitary departments in India goes back for about fifty years. During that period great improvements have been effected in the sanitary condition of the towns, though much remains to be done; but the progress of rural sanitation which involves the health of the great bulk of the population has been slow, and incommensurate with the thought and labour bestowed on the subject. "The reason lies in the apathy of the people and the tenacity with which they cling to domestic customs injurious to health. While the inhabitants of the plains of India are on the whole distinguished for personal cleanliness, the sense of public cleanliness has ever been wanting. Great improvements have been effected in many places; but the village house is still often ill-ventilated and over-populated; the village site dirty, crowded with cattle, choked with rank vegetation, and poisoned by stagnant pools; and the village tanks polluted, and used indiscriminately for bathing, cooking and drinking. That the way to improvement lies through the education of the people has always been recognised."

Of recent years the pace has been speeded up as education progressed, education developed, and funds were available. In a resolution issued in May 23rd, 1914, the Government of India summarised the position at that time, and laid down the general lines of advance. This resolution (*Gazette of India*, May-25th, 1914) should be studied by all who desire to understand the present position and policy: its main features are summarised here.

The governments in India have moved more rapidly of late. In 1898, the Government of India issued an important statement of policy. In 1908, Imperial grants amounting to Rs. 30,00,000 (£200,000) a year were made to local Governments. A new department of the Government of India was created in 1910 in order to relieve the Home Department of education, sanitation and some other branches of the administration. In addition to sanitary conferences held by local Governments, three All-India sanitary conferences were convened at Bombay, Madras and Lucknow, respectively, over which the Hon'ble Sir Harcourt Butler presided as Member of the Governor-General's Council in charge of the department concerned. These conferences were attended by non-officials as well as officials, by laymen as well as professional sanitarians. Again, the **Indian Re-**

search Fund Association has been founded to further the prosecution of research, and the propagation of knowledge and experimental measures generally in connection with the causation, mode of spread and prevention of communicable diseases. To this fund the Government of India make an annually recurring grant of 5 lakhs of rupees (£33,333). Moreover since the constitution of the new department of the Government of India, Imperial grants have been made to local Governments and Administrations to the amount of Rs. 4,61,47,000 (£3,076,466), of which Rs. 55,23,000 (£368,200) are recurring, and Rs. 4,06,24,000 (£2,708,266) non-recurring. In addition, grants amounting to Rs. 82.33 lakhs (£548,866) a year have been made to district boards in certain provinces, a substantial portion of which will, it is hoped, be expended on rural sanitation. These grants have rendered practicable the execution of schemes which a few years ago seemed beyond the limits of financial possibility; and there can be little doubt that the movement for sanitary reform is now well established and progressive throughout the country.

Organisation.—As a result of the Plague Commission's Report Lord Curzon's Government took up with vigour the reorganisation of the sanitary department. Research institutes were started and an appointment of Sanitary Commissioner with the Government of India was created. The functions of this officer were to advise the Government of India upon sanitary and bacteriological questions to settle with local Governments the principles on which an advance should be made and to organise and direct research throughout India. The arrangement was not completely successful. Among the disadvantages, the separation of research from clinical work deterred men from entering the department, and the office work in connection with research prevented the Sanitary Commissioner from undertaking wide and constant touring. The organisation was accordingly modified in 1912. The Sanitary Commissioner is now the independent adviser to the Government of India in all technical and sanitary matters, but all questions of personnel as well as the administration of the bacteriological department and research generally have been placed under the control of the Director-General, Indian Medical Service, with the Sanitary Commissioner as his staff officer.

The Sanitary Organisation.

The sanctioned strength of the superior sanitary organisation in India now is

(a) A Sanitary Commissioner with the Government of India.

(b) A bacteriological department comprising—

(i) thirteen laboratory appointments distributed as follows:—

Central Research Institute	1 Director and 3 Assistants.
Bombay Bacteriological Laboratory	1 Director and 2 Assistants.
King Institute of Preventive Medicine, Madras .	1 Director and 1 Assistant.
Pasteur Institute, Kasauli	1 Director and 1 Assistant.
Pasteur Institute, Coonoor	1 Director and 1 Assistant.

(ii) fifteen new appointments recently sanctioned for the prosecution of research work and direct investigation in the field.

(c) The following establishments under local Governments :—

Province.	Sanitary Commissioners.	Deputy Sanitary Commissioners.	Health Officers, Sanitary Engineers.			
			1st class.	2nd class.	Sanitary Engineers.	Deputy or Assistant Sanitary Engineers.
Madras	1	3	12	19	1	6
Bombay	1	5	4	9	1	..
Bengal	1	5	6	17	1	2
United Provinces	1	4	11	17	1	3
Punjab	1	2	2	5	1	1
Burma	1	2	4	16	1	2
Bihar & Orissa	1	3	2	8	1	2
Central Provinces	1	2	1	..
Assam	1	1	1	..
North-West Frontier Province	1	1	1	1
Delhi	1	..	3	..	1	..
Total	11	26	45	94	10	16

Provincial Agency.—In their resolution, dated the 23rd May 1912, the Government of India provided for a large increase in the number of Deputy Sanitary Commissioners and for the appointment of health officers (of the first-class for larger municipalities and of the second-class for the smaller towns) on the lines of detailed proposals received from local Governments. Twelve additional appointments of Deputy Sanitary Commissioner, thirty-five appointments of health officer of the first-class and a large addition to the number of second-class health officers were sanctioned in 1912 and 1913, the entire cost of the additional Deputy Sanitary Commissioners on the basis of the scale of pay fixed for Indians and half the cost of the health officers being met by imperial grants. The Government of India also advised local Governments to take powers, where these did not exist, to require a municipality to appoint a health officer and to veto the appointment of an unfit person. Such powers already exist in the Bombay Presidency, and have recently been taken by legislation in Bengal. Simultaneously, the Government of India recommended the system in force in Madras whereby every municipality is required to employ one or more trained sanitary inspectors in proportion to population. Sanitary inspectors are now being employed in large numbers in towns. In addition, the civil surgeon in every district is the sanitary adviser of the local authorities and in most provinces controls the vaccination staff. The provision of an increased staff of sanitary engineers is engaging urgent attention.

Voluntary Agency.—The Government of India attach great importance to the organisation of voluntary agencies and have recently made a grant of Rs. 20,000 (£1,333) a sum equivalent to that given by the Bombay Government to the BOMBAY SANITARY ASSOCIATION, which was founded in 1903, and now has

corresponding branches in several districts and Native States.

Research.—The policy of the Government of India is to keep the control of research under itself, but to decentralise other branches of sanitation. The creation of an imperial department is no departure from that policy, and the large imperial grants already mentioned have been made without any interference with provincial Governments. While the general direction of a policy of public health must remain with the central Government, all detailed control and executive action are, and will be, left to local Governments. The Sanitary Commissioner with the Government of India is a touring officer empowered to consult and confer informally with local Governments and their officers upon matters connected with sanitation. He is not permitted to encroach upon the authority of Local Governments over the officers under their control.

Provincial Officers.—The position of Provincial Sanitary Commissioners towards the administrative heads of the medical department varies somewhat in different provinces. The Government of India do not wish to interfere with the arrangements which local Governments may consider best suited to local conditions but they desire to insist on the importance of defining the functions of the two officers and securing to the Sanitary Commissioner the position of responsible technical adviser to the local Government in all matters affecting public health.

Sanitary Boards.—In every province, sanitary boards have been composed with varying powers, some being merely advisory, others having authority to sanction schemes and allot funds. These boards are composed of officers belonging to the medical, sanitary, engineering and other branches of the civil services with the

addition of non-officials. The Government of India view with favour and confidence the devolution of financial authority and responsibility to these boards, and they commend to local Governments the appointment of a permanent salaried secretary to the board where this has not been done. They believe that such an appointment, wherever made, has resulted in an increase of efficiency.

Training.—Arrangements for training the superior sanitary staff are now engaging the attention of the Government of India. The chief difficulty at present is to provide courses in practical hygiene and in the study of the bacteriology and etiology of tropical diseases. It is hoped in the near future to make arrangements in India for the former and to utilise the schools of tropical medicine at Calcutta and elsewhere for the latter. Meanwhile, a British diploma in public health is required from candidates for the post of Deputy Sanitary Commissioners and health officers of the first class. The problems of public health in India are vitally complicated by the fact that biting insects are a prominent factor in the dissemination of disease and it is obviously desirable to provide in India, as soon as possible, a complete course of training for sanitary officers.

Training classes for sanitary inspectors are now held in all the more important provinces.

Department of Public Health.—A substantial beginning has thus been made for the development of a department of public health and Indians have been freely enlisted for it. The posts of Deputy Sanitary Commissioner and health officer are now open to Indians. Nine Deputy Sanitary Commissioners out of 26 and the majority of health officers are Indians. The new bacteriological department consisting of 28 officers is also open to duly qualified Indians.

As health officers and Sanitary Engineers gradually relieve Deputy Sanitary Commissioners of much of the drudgery of inspection and routine work, it is hoped that the latter will be set free to deal with epidemics and communicable diseases from a higher plane, and to consider issues of public health wider than those which they are able to review to-day. It is therefore important to provide in advance free interchange between them, the laboratory workers and those carrying out practical research in the field.

Progress of Research.—Research is slowly lifting the veil which hides the secrets of disease and mortality and opening up fields of inquiry scarcely thought of a generation ago. The discovery by Sir Ronald Ross of the part played by the mosquito in the communication of malaria and the appointment of the Plague Commission in 1898 are landmarks in the history of Indian Sanitation. In 1902, a research institute was founded at Guindy in Madras, named the King Institute after Lieutenant-Colonel King, C.I.E., I.M.S., in view of his devoted efforts in the cause of sanitation in that presidency. In 1905 Lord Curzon's Government summed up the position and the policy of the Government of India in regard to the establishment of laboratories for the study of problems of public health in India. The functions of the central-laboratory were original research, the preparation of curative sera and

the training of scientific workers. The functions of the provincial laboratories were diagnosis and special research connected with local conditions. This policy has been steadily developed. The Central Research Institute has been established at Kasauli. The Plague Research Laboratory at Parel has been extended and re-equipped and is now the bacteriological laboratory for the Bombay Presidency; and a proposal is under consideration to attach to it a school of tropical medicine. A research laboratory and school of tropical medicine are under construction at Calcutta. Pasteur institutes exist at Kasauli and Coonoor. A third is about to be established in Burma, and it is under discussion to establish others in Assam (where it will be combined with a research laboratory) and Bombay.

Besides the routine work connected with the bacteriological diagnosis of disease, anti-rabic treatment, the manufacture of various vaccines and sera and general research, these laboratories at different times have been the centres of many special investigations, notable amongst which are those on plague and enteric fever. It is hoped that before long each province in India will have a laboratory fully equipped for research.

Research Fund Association.—The foundation of the Indian Research Fund Association in 1911 has marked an important era in sanitary progress. The control and management of the association are vested in a governing body, the president of which is the Member in charge of the Education Department of the Government of India. The governing body is assisted by a scientific advisory board, of which not less than three members have seats on the governing body. They examine all proposals for work in connection with the scientific objects of the association and report as to their importance and feasibility. The members of this board are appointed for one year, but are eligible for re-election, and they have power to add to their number. The present members are the Director-General, Indian Medical Service, the Sanitary Commissioner with the Government of India, the Director of the Central Research Institute at Kasauli, the Officer in charge of the Central Malerial Bureau and the Assistant Director-General, Indian Medical Service (Sanitary). Sir Ronald Ross has been elected an honorary consulting member. The membership of the Indian Research Fund Association is open to non-officials. Every donor of Rs. 5,000 is entitled to become a permanent member, while every subscriber of Rs. 100 per annum can be a temporary member. Members of the association are entitled to attend and take part in the annual general meeting of the association and to receive copies of the reports and other publications issued from time to time by the association. Although, so far, the fund has been financed solely by the Government of India, it is hoped that in time Indian philanthropists will contribute towards the expansion of the association by founding chairs of research by financing experimental research measures and otherwise.

The association has also started a journal for the publication of medical research work done in India—the "INDIAN JOURNAL OF MEDICAL RESEARCH"—published quarterly. The fav-

ourable reception which has been accorded to the first three numbers is evidence of the increased interest that is being taken in sanitary science in India to-day.

Water Supply.—Few subjects have received more attention of late than the provision of a piped supply of filtered water in towns. Complete figures are not available but sums amounting to at least Rs. 3,51,58,297 (£2,343,886) have been spent during the last 20 years on completed schemes. Projects costing Rs. 1,10,03,433 (£933,562) are under construction and projects costing Rs. 1,14,44,750 (£762,983) have been prepared and sanctioned. These figures are exclusive of the expenditure in the Presidency towns and Rangoon.

Drainage.—Drainage schemes on modern lines, are the basis of all sanitary improvement in urban areas. The demand for them is scarcely less than that for piped water and is steadily on the increase. As in the case of water supply complete figures are not available but the known expenditure during the last twenty years has been considerable and is now rapidly increasing. The expenditure on completed works outside the Presidency towns and Rangoon during that period amounted to Rs. 97,65,049 (£651,003), whereas the cost of the works under construction is estimated at Rs. 1,54,20,502 (£1,028,033). In the beginning precedence over drainage was given to piped water-supply but experience has demonstrated the advantage of introducing both concurrently. Without drainage there is no means of carrying off the surplus water and without piped water-supply it is difficult to flush the drains properly.

When drainage schemes on modern lines were first started in this country, there seems to have been a bias against the use of sewers, and, wherever possible, open drains were adopted. Experience has shown that the preference for the open drain and the fear that sewers would give excessive trouble were not well founded. On the contrary, much of the advantage of a drainage system is lost if only open drains are used, as the old system of hand-carriage latrines has to be continued. Moreover, economy in establishment is possible only in the case of a sewage system.

Pilgrimages.—Pilgrimages necessitating as they do the collection of large numbers of persons, often more than a million, at one place at one time have an important sanitary aspect mainly in connection with cholera and other communicable diseases. The Government of India recently decided to examine the sanitary arrangements at the chief places of pilgrimage throughout India and local Governments were asked to appoint provincial committees for this purpose under the presidency of the Sanitary Commissioner with the Government of India with a view to formulate practical schemes of improvement. The inquiry is still in progress but the Government of India have already made a grant of Rs. 2 lakhs (£13,333) and promised an additional grant of 4 lakhs of rupees (£26,666) spread over four years towards the improvement of the pilgrim route to Badrinath; and they have made a further recurring grant of Rs. 20,000 (£1,333) a year for the same object. The important question of improving the conditions of the pilgrimage to the Hedjaz by Indian Muslims

is undergoing close scrutiny. The Governor-General in Council anticipates that these inquiries will lead to signal sanitary improvements and promote the convenience and comfort of many millions of His Majesty's loyal Indian subjects.

Rural Sanitation.—The following observations are based on practical experience of rural sanitation:—

- (a) Travelling dispensaries may be used to spread a knowledge of the simple facts regarding the more common diseases. For this purpose the sub-assistant surgeons in charge should be given a special training in hygiene. Once they become known to the people as healers of the sick their advice as sanitarians may become more acceptable.
- (b) The improvement of the village water-supply is as important as it is difficult. Apparently, excellent results have been obtained by disinfection of wells with permanganate of potash. Experiments are being made in different parts of India in the use of tube-wells, etc. It might serve as an useful object lesson to use pumps and tube-wells for the provision of water at fairs, schools, hospitals, and local public offices. In some localities, a tank supply alone is possible and the difficulty is to protect even new tanks from pollution.
- (c) In several provinces, notably in Madras, village unions or circles have been formed and their committees entrusted with small grants for the improvement of the sanitation of the village site. This measure might be extended experimentally elsewhere. It is calculated to encourage discussion and inquiry regarding sanitary work.
- (d) Village midwives are, in some districts, encouraged by small grants of money and rewards to attend at the headquarters hospital for a short and simple course of training. These measures open up possibilities with reference to a reduction in infantile mortality and children's diseases generally.
- (e) In most districts in India, the civil surgeon is also in theory the sanitary officer of the district. His duties at head-quarters, however, do not allow him to tour and inspect in the district to the extent that is necessary; even in the case of epidemics in the district it is sometimes not possible for him to leave head-quarters. In some provinces, district sanitary officers have been appointed and there can be little doubt that many more such appointments are required and that one of the most urgent and hopeful measures for promoting rural sanitation is the appointment of well qualified and whole-time district health officers to control and organise all sanitary arrangements and experiments in the district.

Birth and Death Rates.—The population of the areas in which births and deaths were registered in 1917 was 238,496,222. 9,379,349 births and 7,803,832 deaths were registered; the rates per mille being 38·41 and 32·72 as compared with an average of 38·42 and 29·19 respectively for the previous five years.

The lowest birth rates were recorded in Coorg 30·51; Assam 31·35; North-West Frontier Province 32·1; and Madras 32·4; but an excess of births over deaths was noticed in all the provinces except Ajmer Merwara and Bombay. The death-rates of Bengal, Central Provinces and Berar and Assam were lower than in the preceding year, while Bombay's death rate was 7·44 in excess of the rate for the previous year.

Province.	Birth Rates (per mille).		Death Rates (per mille).	
	1916.	1917.	1916.	1917.
Delhi	49·89	52·75	32·92	32·68
Bengal	31·89	35·91	27·37	26·19
Bihar and Orissa	36·6	40·4	32·8	35·2
Assam	30·52	31·35	28·59	27·9
United Provinces	43·9	46·8	29·50	37·91
Punjab	45·6	45·3	30·7	37·9
N. W. Frontier Province	33·8	32·1	30·1	29·9
Central Provinces and Berar	43·85	48·13	39·95	36·6
Madras	32·5	32·4	21·9	26·2
Coorg	28·74	30·51	27·23	28·87
Bombay	35·98	35·73	33·32	40·76
Purma, Lower	32·75	35·58	22·61	24·80
Burma, Upper	35·30	37·34	26·21	26·13
Ajmer-Merwara	38·68	36·81	40·48	102·96
Total ..	37·13	39·33	29·10	32·72

Chief Diseases.—There are three main classes of fatal disease: specific fevers, diseases affecting the abdominal organs, and lung diseases. Intestinal and skin parasites, ulcers and other indications of scurvy widely prevail. The table below shows the number of deaths from all causes and from each of the principal diseases in British India and death-rates per 1,000:—

Years.	Deaths from all Causes.	Cholera.	Small-Pox.	Fevers.	Dysentery and Diarrhoea.	Plague.	Respiratory Diseases.
1912 ..	7,090,991 {	407,769 1·71	89,357 ·37	3,936,085 16·49	292,216 1·22	263,037 1·10	247,736 1·04
1913 ..	6,845,018 {	294,815 1·24	98,155 ·41	3,983,112 16·71	246,578 1·03	198,456 0·83	237,229 1·00
1914 ..	7,155,771 {	280,730 1·18	76,590 ·32	4,092,345 17·16	278,225 1·17	266,588 1·12	261,149 1·09
1915 ..	7,142,412 {	404,472 1·70	83,282 ·35	3,990,287 16·73	261,800 1·10	380,501 1·60	257,721 1·08
1916 ..	6,940,436 {	288,047 1·21	60,642 ·25	4,085,784 17·13	243,381 1·04	205,527 ·86	286,247 1·20
1917 ..	7,803,832 {	267,002 1·12	62,277 ·26	4,555,221 19·10	260,984 1·10	437,036 1·83	316,821 1·33

Cholera.—To cholera in 1917 were ascribed 267,002 deaths which represent a death rate of 1·12 as compared with 1·21 in the previous year. Bihar and Orissa suffered more heavily from this disease than any other administration and was responsible for 41 per cent. of the all-India cholera mortality, reporting a cholera death rate of 3·1. Assam, 1·81, and Madras, 1·5, were the only other administrations in which the cholera death rate was in excess of unity. The North-West Frontier Province was altogether free from the disease and the incidence was extremely low in Upper Burma, the Central Provinces, Delhi and the Punjab.

Small-pox.—Small-pox was not an important cause of mortality in 1917. The 62,277 deaths ascribed to it are equivalent to a mortality rate of 0·26 as compared with 0·25 in 1916. More than half the small-pox deaths were reported from the Madras Presidency where the disease caused a death rate of 0·9. The two small provinces of Coorg and Ajmer-Merwara suffered relatively very severely, returning small-pox death rates of 3·23 and 2·54.

Plague.—437,036 deaths were attributed to plague in 1917, equivalent to a death rate of 1·83 as compared with 0·86 in the previous year. The four most severe epidemics, with

the number of deaths recorded in each, were experienced in 1904-05, 1,328,249; 1906-07, 1,286,513; 1903-04, 1,138,451 and 1917-18, 820,292. The two mildest outbreaks were those of 1898-99 and 1908-09 when the total plague deaths amounted to only 119,045 and 126,442, respectively.

Fevers.—'Fevers' were the cause in 1917 of 4½ million deaths or more than 58 per cent. of the total mortality from all causes. The 'fever' death rate for India as a whole was 19·10 as compared with 17·13 in 1916 and 16·73 in 1915. The proportion of total deaths ascribed to 'fever' was comparatively low in Madras 31 per cent., Burma 32 per cent. and Bombay 37 per cent. Ajmer-Merwara returned the extremely high fever death rate of 68·41: it is probable that a considerable proportion of these deaths should have been attributed to plague.

Dysentery and Diarrhœa.—A death rate of 1·09 was ascribed to dysentery and diarrhœa in 1917 as compared with 1·04 in 1916. Of the major provinces Central Provinces and Berar, 2·55, United Provinces, 1·99, Bombay, 1·85, and Lower Burma, 1·08, alone reported dysentery and diarrhœa death rates in excess of unity.

MEDICAL INSTITUTIONS.

Hospitals, Dispensaries, &c.—There were 3,051 of these institutions in existence at the end of 1916; during 1917 the number decreased by 60, giving a total at the end of 1917 of 2,991. This decrease is largely accounted for by the demand for subordinate personnel necessitated by the War. The necessity for more of these institutions is felt in almost every part of India. In spite of the decrease in the number of dispensaries, there has been a greatly increased number of in-patients and out-patients, and the total number of patients treated has risen up from 34,454,775 in 1916 to 35,588,432 in 1917. The number of operations has fallen from 1,376,504 in 1916 to 1,371,536 in 1917, a decrease of 4,968.

Medical Colleges.—There are five medical colleges (Bombay, Madras, Calcutta, Lahore and Lucknow), the students in which numbered in 1916, 2,730 including a few women. There are also 15 medical schools, the students in which numbered 2,936. There is an X-ray institution at Dehra-Dun where a class of instruction was attended by 20 students. Branch installations opened at Delhi and Simla are obtaining a large number of patients.

Pasteur Institutes.—There were Pasteur Institutes for anti-rabic treatment at Kasauli (Punjab), Coonoor (Madras), Shillong (Assam) and Rangoon (Burma). In these four institutes 8,632 patients were treated during the year.

Lunatic Asylums.—The treatment of lunatics at asylums prevails on a comparatively small scale; but the asylum population is steadily increasing. The number of asylums in 1917 was 22. The number of patients admitted was 2,617 as against 2,529 in 1916. The total asylum population of the year was 9,793.

Leper Asylums.—There are many leper asylums among which may be mentioned the Madras Government Leper Asylum, the Matunga Leper Home, Bombay, the Trivandrum State Leper Asylum and the Calcutta Leper Asylum. There are also many asylums or homes, frequently under some sort of Government supervision, including about 50 asylums of the Mission to Lepers.

The Tropical Diseases.

This account of the chief tropical diseases was written by Lt.-Col. E. F. Gordon Tucker, I.M.S., of Grant Medical College :—

If the principal scourges of the European in the tropics, namely, malaria, dysentery, and typhoid, could be removed, there would still remain the strain of climate as a source of disease and a cause of deteriorated health, not amounting for a time to actual illness, but eventually showing its effects in lessened resistance to the wear and tear of life, premature senility of the tissues, and diminished fertility. This results mainly from the transfer to a hot climate of an individual whose heat-regulating mechanism has previously adapted itself to conditions where the body temperature has to be maintained some 40° above that of the surrounding air. On arrival in a country where the temperature of the air is perhaps the same as that of the living tissues, it is obvious that there must be a sudden and violent disturbance of such mechanism. This mechanism is very complex and exists for the purpose of striking a balance between the heat formed by the changes in the tissues, and the heat lost from the lungs and by radiation from the surface of the skin. But beyond this there is no doubt a regulation of the temperature dependent in some way on the normal working of the central nervous system, as is shown by the remarkable alteration which may take place in the temperature of parts of the body when the brain has been subjected to some gross lesion.

In the tropics the amount of carbonic acid given off by the lungs is reduced about twenty per cent., the number of respirations per minute is reduced, and there is lessened activity of the lungs. This shows that there is less tissue change (or combustion) going on in the tissues, that is to say, diminished heat-production. The same is shown in the diminished amount of work done by the kidneys. As regards heat-loss, this is almost entirely effected through the skin, 70 per cent. of the heat of the body in temperate climates going off by radiation and conduction, and 15 per cent. by evaporation. When however the temperature of the tropical atmosphere rises, the loss by radiation falls to nothing, and all the heat has to be dissipated by evaporation from the surface. Consequently, practically all the work of losing heat, which strikes the balance with the heat production and maintains the body at a normal temperature, falls upon the sweat glands which are therefore in a state of continued and abnormal activity. In hot dry atmospheres the water evaporates as soon as formed, but in conditions of heat with great humidity, such as obtain during the worst months of the year in Calcutta and Bombay, the skin is kept continually moist by trickling beads of perspiration. Herein lies the comfort and healthiness of the punkah which removes excessive moisture. But it is obvious that in order to keep the temperature of the body normal there must be increased flow of blood to the surface of the body, a state quite different from the conditions under which the organs of the European have been trained. This favours those sudden chills to which Europeans are so sub-

ject, and acts prejudicially to the working of the internal organs, especially those subserving digestion. A blast of cold air coming on the congested skin in the early hours of the morning must chill the surface, causing a sudden contraction of the cutaneous vessels, and tending to produce a rapid flux of blood to the deeper parts, inducing a congestion of the mucous membrane of the bowels, and from that results the "morning diarrhoea" which is occasionally severe and exhausting. Such a state of affairs may become chronic, and so lead up to one of the climatic diarrhoeas which are a frequent cause of invaliding. Moreover a sudden congestion of the liver and spleen in a person who has had malaria, may be followed by a malarial hepatitis or splenitis, and repeated attacks of these conditions may result in permanent enlargement of these organs; or at any rate, in the case of the stomach and liver, to derangement of function and so to chronic dyspepsia or insufficient manufacture of bile.

Again, the chronic hyperæmia of the skin favours the development of fungi and microbes. Hence the existence of ringworm of various kinds from which Europeans frequently suffer. There are microbes which, even in temperate climates, are found within the layers of the skin or on the surface. On account of the chronic congestion and moisture of the skin in tropical climates these microbes not only become abundant but virulent, and hence the BOILS which are often a serious affliction in the hot months. We frequently come across most distressing cases where the patient is covered from head to foot with them. When the boil comes to a head and softens it is easy to afford relief by opening each, and so relieving tension, but the worst kind is the "blind boil" which forms as a hard red mass, intensely painful and not coming to a head, and here an incision gives little relief. Until lately these cases were very unsatisfactory to treat, and patients would recover after weeks of pain and much reduced in health. Fortunately we have in the vaccine treatment a most successful method, the vaccine used being either a stock one and generally acting like magic: or, in a small percentage of cases requiring to be made from the boils themselves. In still other cases the infection of the skin causes the formation of CARBUNCLES, which are more serious but require treatment on the same lines.

Another more common condition resulting from the congestion of the skin is PRICKLY HEAT. This results from acute inflammation about the sweat glands and distention of their orifices, producing red papules and little vesicles, the site of intense itching. The trouble is believed to result from the proliferation of a particular microbe in the skin, which alters the reaction of the perspiration. Be this as it may, inoculation of the skin is likely to take place through scratching, and so to the formation of boils. In some cases the skin is so intensely inflamed that the region of the shoulders and neck feels like leather, or the surface gives the impression of sand-paper. It is a serious condition in young infants, as

the irritation prevents sleep, interferes with digestion and so promotes diarrhoea, so that this simple malady may be the starting point of a dangerous illness. Flannel next to the skin should be avoided in the hot weather as it is so liable to start the irritation. A good lotion consists of two teaspoonfuls of Eau-de-cologne in ten ounces of a 1 in 2000 solution of perchloride of mercury, dabbed on the skin and allowed to dry: followed by dusting with equal parts of boric acid powder and talc.

To avoid the heat the European flies to the punkah. The electric punkah has been one of the greatest blessings introduced during recent years into Indian towns as its use insures a good night's rest in place of the weary hours of sleeplessness which formerly wore out the temper and the mental energy of the European during the hottest months. Still this blessing is not without its attendant dangers. Most common are attacks of muscular rheumatism, sudden internal chills causing diarrhoea, attacks of colic, ordinary nasal catarrh, and sometimes bronchitis or pneumonia. The electric punkah does away with the mosquito curtain, which does not conduce to the free circulation of air, and gives good ventilation in its place.

Finally, we have the effects of a continued high temperature on the working of the nervous system. As has been remarked by the late Lt.-Col. Crombie, I.M.S., (in a valuable paper on "The measure of physical fitness for life in the Tropics," to which the writer is much indebted). "In the tropics there is going on continually and unconsciously a tax on the nervous system which is absent in temperate climates. The nervous system, especially those parts of it which regulate the temperature of the body, are always on the strain, and the result is that in time it suffers from more or less exhaustion." The mean temperature of a European in India is always about half a degree higher than it is in a temperate climate, and it may be raised to 99° or 100° after severe bodily exertion. When, under the strain of a severe hot moist and sultry season, the heat-centre gives out, or as it is said is "inhibited," we have all the serious phenomena of HEAT STROKE. But in the less marked but long

drawn out process of nervous exhaustion we have the common tropical effect of deficient mental energy, generally commencing with unnatural drowsiness or loss of appetite and a yearning for stimulants, which culminate in that lowering of nerve potential which we know so well as NEURASTHENIA. This nervous disturbance due to climate is likely to be most marked, as Crombie points out, in two classes of persons, namely those who suffer from obesity, and those who are members of families which may be designated as "neuropathic," that is whose nervous systems are naturally unstable. To these may be added persons with naturally defective digestion and those who have a predisposition to gout.

To sum up, it will be seen that the effects of long residence in the tropics are real and permanent, not only in the direction of lowered bodily health, but in undue wear of the nervous system, which may not only be apparent during active service in duties involving strain, anxiety or responsibility, but also after retirement; so that the chances of longevity of the retired Indian official are not up to the normal, and the "extra" which the Insurance Office puts on such lives is not only to cover the risks incidental to life in the tropics, but also the diminished vitality of those who have survived to enjoy their pension and ease.

But there are other Indian risks, and these are most likely to affect travellers, due to the effects of heat on food. Microbes multiply with profusion in milk, and decomposition is liable to occur in meat within a very short time after killing. Milk should always be boiled; and owing to the dirt in railway dining-rooms, and in many hotels, and the carelessness of the lower type of native servant employed therein, it would be better to rely on tinned milk or on a supply of Horlick's milk tablets, when travelling long journeys by rail and in the smaller towns. Beef should never be eaten underdone, as it is a prolific source of tapeworm in India. There is also liability to contamination of food by flies and dust. Indian cooks, though among the best, have little regard for sanitation, and consequently the state of the cook-house should be carefully supervised.

MALARIA.

Attacks of malaria, dysentery, and enteric represent the principal risks to the European travelling in India. Malaria is the commonest cause of fever in the tropics and subtropics, but the risks therefrom have been greatly diminished by our complete knowledge of its causation which now permits an intelligent prophylaxis, that is, taking adequate precautions against infection. The connection of certain kinds of fever with marshy soils has been recognised from ancient times, whence its old name of paludism; and the word "malaria" itself implies the belief in the existence of an emanation of poisonous air from the water-logged ground. It is now realised that the poison is conveyed solely by mosquitoes, and by the anopheline species. There are only a few of the many anophelines which carry

malaria, but all are to be regarded as dangerous.

The parasite of malaria is a delicate jelly-like body which invades the red cells of the blood, and lives at their expense. It has two life-cycles, one within the blood of the human host (endogenous and sexual), the other in the stomach and tissues of the mosquito (exogenous and sexual). But the first part of the sexual cycle is prepared for in the blood of the human host.

If the blood of a patient be taken about an hour before the occurrence of the "rigor," (the shivering-fit which marks the commencement of the attack), and examined in a thin film under a high power of the microscope, some of the red corpuscles will be found to contain bodies composed of delicate proto-

plasm showing minute granules of dark pigment in their substance. These bodies are the parasites. The granules represent the result of the destruction by the parasite of the red colouring-matter of the blood-cell. The latter consequently appears paler than natural and is enlarged. In the parasite of the so-called benign tertian fever, if the blood be again examined when the rigor is commencing, the little mass of jelly is found to have divided into from twelve to twenty minute spheres all held together by the remains of the degenerated red cell, and with minute masses of pigment in the centre. Later the group of spherules has burst through the envelope that held them, and has appeared free in the blood-fluid. Many of these free spherules are attacked and absorbed by the phagocytes, but those which escape destruction effect their entrance into other red blood cells and go through the same process of sexual division, taking forty-eight hours for the process. On the time taken for this cycle to occur depends the periodicity of the fever, the attack appearing every third day, whence the name tertian fever. Another variety of malarial parasite, not very common in India, takes seventy-two hours to complete its cycle, hence called the "quartan" variety.

There is also a third kind of parasite called the "malignant tertian," called by the Italians the *aestivum*-autumnal parasite, which also takes forty-eight hours to go through its cycle, but which gives rise to a more irregular fever, and has more pernicious effects on the system and is also liable to produce severe nervous symptoms, such as unconsciousness, often ending in death with very high fever. Each kind of parasite has its special characteristics which can be observed by microscopical examination. Consequently expert examination of the blood is always advisable in cases of fever, not only to show that malaria is present, but also to distinguish the particular kind which is causing the trouble.

Within the blood there also appears the first stage of the sexual life of the parasite in the shape of male and female elements, which result from some of the parasites which do not undergo the usual segmentation described above, and which exist for the purpose of allowing further development in the non-human host, which in the case of this particular parasite is the mosquito. These sexual elements are especially in evidence in the blood of cases of the pernicious variety of malaria, in the form of crescentic bodies which obtain considerable protection from the phagocytes, and many therefore persist for some time in such blood. "Crescents" appear only in malignant fevers, and persons who harbour them are of course a danger to the community, inasmuch as the mosquitoes of the locality are infected from them, thus rendering such village or street unhealthy from malaria.

The sexual elements of the malarial parasites when taken into the stomach of the mosquito which sucks up the blood of its victim, undergo certain changes, the male element extruding flagellate or hair-like processes which fertilise the female. The latter thereupon changes into a body endowed with the

property of locomotion, which makes its way into the coats of the stomach of the insect, and becomes divided up into a vast number of minute cysts, each of the latter becoming packed with minute rod-like bodies. The cysts rupture into the body-cavity of the mosquito, and the rods, thereby set free, become collected within the substance of the salivary glands, and ultimately make their way to the base of the proboscis. On such an infected mosquito pushing its proboscis into the human skin when it wishes to draw blood some of the rods are injected into the blood stream. They then enter red blood corpuscles and go through the various cycles described above.

From three to five days, or as long as a fortnight, after being bitten by such a mosquito the patient has an attack of fever, sometimes preceded by pains in the limbs, headache, and malaise. This is soon succeeded by a feeling of intense chill, perhaps associated with vomiting. The skin becomes cold and blue the shivering is excessive and prolonged, constituting the "rigor" stage. In this state the patient is in great distress, and obtains little sense of relief from the blankets which he heaps up over himself. Although the surface of the body is very cold, the temperature, taken in the arm-pit or mouth, shows a rise to 103° or higher. In a quarter of an hour or more the "hot stage" comes on, the face becoming flushed, the surface of the body red and warm, the small quick pulse becoming full and bounding, and perhaps the patient complains of throbbing headache. He remains thus for a few hours and then occurs the "sweating stage," perspiration breaking out about the head and face, and soon extending to the whole body. Great relief is experienced when this is entered on, and is likely to be followed by a refreshing sleep. During the paroxysm the spleen is often enlarged and may be the seat of considerable pain. There is also often troublesome cough from a concomitant bronchitis. With repeated attacks the enlargement of the spleen is liable to become permanent, the organ coming to form a large heavy tumour with special characteristics, the so-called "ague cake," which is common among the children of malarious districts. Europeans who suffer from severe or repeated malaria are likely to suffer from permanent ill-health in the shape of anæmia, dyspepsia; or easily-induced mental fatigue.

Treatment.

The traveller in India should endeavour to guard himself against the bites of mosquitoes. This can be done to a great extent by the use of mosquito curtains, the mosquito seeking the blood of its victim mainly at night. But when travelling by train protection is difficult. There are some odours which mosquitoes appear to dislike. Sprinkling the pillows with lavender water is sometimes efficacious, or smearing the hands with lemon-grass oil. Camps should not be pitched in the neighbourhood of native villages, if it can be avoided. Travellers should provide themselves with thermometer and a supply of quinine tablets.

During the cold stage the patient should be well covered, and hot fluids administered, unless vomiting is present. Quinine should not be taken in this stage as it increases the distress. A diaphoretic, or sweating mixture, should be administered every two or three hours until the skin becomes moist, and throughout the hot stage: this soon gives relief, and when the stage of perspiration has been reached, the grains of quinine should be given, and repeated in five grain doses every six hours until the temperature becomes normal. Thereafter the drug should be continued for a few days in doses of five grains twice a day. This is calculated to ward off a second attack, or, at any rate, to reduce its severity and prevent a third. If there is vomiting, quinine tablets are not likely to be digested and absorbed; in such cases the drug should be given in a mixture dissolved in a dilute acid. The advantage of quinine tablets is that the unpleasant taste is avoided.

There are some severe malarial fevers which appear to be continuous. These are the most pernicious.

tertian fevers, which so often cause difficulty in diagnosis inasmuch as for a few days they may suggest enteric fever, especially to those inexperienced in tropical diseases. In such cases large doses of quinine are required, the skin being kept moist meanwhile by a diaphoretic mixture. Some of these fevers last for a week or longer, but the majority of them yield to quinine in three or four days. It is in such that an early examination of the blood is so useful. In certain cases of profound malarial poisoning or where, for any reason, quinine does not appear to be acting when administered by the mouth, recourse must be had to the subcutaneous injection of quinine into the tissues. This should always be done by a skilful physician, and with special precautions, as in some cases of tetanus have occurred after quinine injections taken from stock solutions, even when apparently given with every care. The "vaporoles" prepared by Messrs. Burroughs Wellcome & Co., which consist of little glass capsules containing preparations of the drug dissolved in sterile and non-irritating fluid, appear to be absolutely devoid of risk and are very efficacious.

TYPHOID FEVER.

By Typhoid or Enteric Fever is meant a continued fever, lasting for three weeks or longer, due to the entrance of the bacillus into the intestinal canal of a particular person. This bacillus, which not only produces serious abdominal trouble but also produces symptoms referable to a generalised infection of the blood by the bacillus and the poison which it engenders. Formerly the scourge of the British Army in India, it has been reduced to a very low point, through the prophylactic use of Sir Almoth Wright's compound, continuous attention to the sanitary condition of the soldiers' quarters, improvement of water supplies, and skilful medical treatment.

"Paratyphoid" is a term applied to certain fevers which have all the characters of typhoid, but with a rather lower mortality, and which are due to infection by bacilli which are closely related to the typhoid bacillus.

The fact that typhoid more frequently attacks the new arrivals to the tropics renders this disease one of the risks which tourists have to face, but this can be minimised by knowledge of the manner in which the typhoid bacillus affects an entrance into the system.

Typhoid Fever has now been shown to be a common affection among Indians, contrary to what was held some fifteen years ago. In Bengal and the Punjab, according to Leonard Rogers (Fevers in the Tropics), the maximum of cases for all classes occurs during the hot months, while the maximum for Bombay is in the rainy season. But taking the European cases only he finds that the largest number of cases falls within the dry, cold and hot seasons, and considers that this is due to the European being most frequently infected through contaminated dust, this class of person

requiring greater attention now-a-days to the condition of the water which he drinks: unlike the Indian who will drink water out of the nearest tap.

As is well known, infection of typhoid is most commonly produced by contamination of drinking water. Great care is therefore necessary in boiling and filtering drinking water and in protecting the vessels in which it is kept from contamination by dust. In the neighbourhood of all native villages the soil is laden with animal dejecta which, of course, is very likely to be associated with disease-producing microbes. Hence infection of the food in cook-houses and shops is easily produced by the wind carrying the dust from latrines and other foul areas. Uncooked vegetables produced from gardens watered by sewage-containing fluid are also very dangerous, and should be avoided by the Indian traveller. Lastly oysters taken from estuaries which receive rivers laden with organic matter from the villages on the banks are believed to afford special protection to the typhoid bacillus, and when eaten raw are dangerous.

In many cases the onset of the disease is sudden, with headache, shivering and vomiting, but in a little less than half the onset is insidious, the patient being out of sorts, slightly feverish, perhaps with occasional looseness of the bowels, loss of appetite and a little sickness. He ultimately takes to his bed, generally dating the commencement of his illness from this event, and there forthwith begins a period of at least three weeks of anxiety for his friends and relatives, inasmuch as enteric fever, as seen among Europeans in India, is characterised by its greater severity and longer duration. The temperature rises gradually day by day during the first week, remains at a fairly constant high level during the second, becomes

irregular with daily remissions during the third, and in the majority of cases is succeeded by a period of convalescence, during the first part of which the greatest care in dealing with the patient is required. The bacillus produces its most important effects on the lower portion of the small intestine, certain glandular structures in the wall of the bowel becoming inflamed, enlarged, and finally ulcerated. It is on the formation of these intestinal ulcers that many of the worst complications depend. The ulcerative process favours, first a looseness of the bowels, later an exhausting diarrhoea. Moreover the destruction of some of the coats of the bowel may open up an adjacent blood vessel and produce alarming or even fatal hemorrhage. And again the whole thickness of the bowel may be perforated, causing death from collapse and peritonitis. This is the danger which the physician has in view throughout the case. It can only be guarded against by the most careful nursing and attention to the dietary. Other dangers are bronchitis and failure of the heart, especially during the third week. During the stage of convalescence the same care has to be taken with the dietary as the ulcers are undergoing healing, and an error might lead to the rupture of one of them when all danger may well be expected to have passed. Finally, owing to the depressing effects of climate, convalescence is often attended with prolonged mental depression.

In the matter of treatment it is absolutely essential that the patient should have the benefit of skilled nursing. Fortunately highly-trained European nurses can now be obtained from any populous centre, though occasions arise when the demand exceeds the supply. If possible two nurses should be obtained for day and night duty respectively. Unless it is absolutely necessary to remove him, the patient should be nursed where he falls ill and not sent long distances by train. At the most he should travel to the nearest large town where there is a Civil Surgeon. Treatment

mainly consists in keeping the fever within bounds, and thereby sparing the strain on the heart which is great during the three weeks of continued fever. This is effected in great part by the system of hydrotherapy, that is, treating the patient by continued tepid baths or by frequent sponging with tepid water to which a little toilet vinegar should be added. There is no special drug which is of any use in aborting the fever, but this does not mean that drugs are of no use in typhoid. On the contrary the complications, which are many, will be detected as they arise by the careful physician, and there is no disease which tries more than this the skill of the doctor and the care of the nurse, who will frequently bring to convalescence what seems to be an almost hopeless case. Abdominal distension, for instance, is a frequent and serious complication in Indian typhoid, and should be treated as soon as detected. It results partly from the decomposition of the intestinal contents, partly from loss of the muscular tone of the bowel. It hinders the respiration and the action of the heart, and favours the occurrence of perforation. Diet consists almost entirely of milk, either pure, diluted with barley water or whey, or as a jelly.

Lastly a word should be said about the importance of typhoid inoculation to those intending to travel in India or the tropics. It is better to have Wright's prophylactic vaccine injected before leaving home, but if this is not done, it should be submitted to on arrival in Bombay. In the majority of cases the only discomfort resulting is a little passing tenderness at the site of inoculation: in some cases there are a few hours of fever: and in the worst the patient feels out-of-sorts for twenty-four hours. The inoculation (with a larger dose) should be repeated on the eighth day. Attention to this small precaution as a routine measure would obviate most of the catastrophes which we witness on occasions among "globe-trotters" who have come to the country for pleasure or health.

DYSENTERY.

The term Dysentery is applied to several forms of infective inflammation of the large bowel, in which the principal symptoms are griping, abdominal pain, frequent straining, and the passage of a large number of evacuations characterised by the presence of blood and mucus. The changes which take place occur in the mucous membrane of the large bowel, and are first an acute catarrh succeeded by ulceration more or less extensive, and sometimes going on to gangrene.

The disease is endemic in India; and is in fact common in Eastern countries, and in Egypt. It is liable to arise in epidemic form especially among armies in the field. It is caused by a contaminated water supply, and by the infection of food by dust and flies. Dysentery is probably caused by several varieties of micro-organisms but for all practical purposes may be said to be divided into two great groups, one due to the amœba of dysen-

tery, and the other caused by a bacillus described by Shiga and known as bacillary dysentery. The latter form is more common in Japan and in the north-eastern side of the Indian peninsula; the amœbic form being that most commonly seen in the Bombay Presidency. The bacillary form is characterised by the presence of a very large number of evacuations perhaps as many as a hundred or even more in the twenty-four hours. In the amœbic form there are seldom more than twenty evacuations in the day, and there is less fever and general depression than in the bacillary variety. In the amœbic form there is greater tendency to thickening of the bowel wall, and to the dangerous complication or sequel of abscess of the liver.

After a few days of severe illness should the patient recover there is a danger that the disease may become chronic, a condition which is associated with emaciation and profound

weakness. The chronic form is also more likely to eventuate from the amoebic type.

The frequency with which it attacks Europeans in India may be judged from the admissions of the European soldiers into hospital, the figures of admissions for each of the years 1910 and 1911 being 7.7 per thousand of strength.

The treatment of the bacillary form with an anti-dysenteric serum has had good results. In the amoebic form most Indian physicians still rely, and rightly so, on the use of ipecacuanha. This has to be given with particular precautions and with a previous dose of opium

to diminish the liability to vomiting. Recently, thanks to the work of Leonard Rogers, a valuable drug has been placed in our hands, in the form of emetine, an alkaloid derived from the ipecacuanha root; and which when injected into the deeper layers of the skin, gives all the good results of ipecacuanha without its unpleasant effects. It is of special value in the case of children in whom acute dysentery is a very serious disease. We have hereby obtained one more efficient weapon in the contest with one of the common diseases of India.

ABSCESS OF THE LIVER.

There are several varieties and causes of abscess of the liver but the term is applied in India to the single abscess which frequently forms as the result of amoebic dysentery, the latter generally preceding but sometimes being concomitant with the formation of the abscess. It is one of the scourges of the European in India, and is especially to be dreaded on account of the high mortality. Taking all the cases together, including the acute and chronic and all classes of the community, the death rate is about sixty per cent., but this will probably be reduced by recent improvements in the methods of diagnosis and treatment. The latest annual report of the Sanitary Commissioner with the Government of India states that next to enteric fever, hepatic abscess is the most frequent cause of death among European troops, but the admissions and deaths on account of it have decreased greatly during recent years. The report also notes that the decrease in the number of cases of liver abscess is coincident with an equally steady fall in the number of admissions to hospital for alcoholism.

The disease is most liable to attack those who, in addition to having had an attack of dysentery, have indulged, not necessarily to excess, in alcohol and general good living, and are at the same time somewhat sluggish in their habits. It is often preceded by continued fever, malaise, dyspepsia, and more or less uneasiness in the liver region, or the latter organ may be acutely enlarged and very tender. In many cases the exact diagnosis is often a

matter of anxiety, but greater precision is now possible as we have come to recognise what Rogers has called the presupplicative stage of amoebic hepatitis, which is very amenable to treatment by ipecacuanha or injections of emetine. The use of this method will often prevent the case going on to the dangerous condition of abscess, which when it has once definitely formed can only be dealt with by prompt operation, which in itself has a high mortality. Further aid is now obtained by special examination of the blood and by the use of the X-rays, which will often clear up a doubtful case.

The abscess generally forms in the right lobe of the liver. Should it form on the left side it is especially liable to rupture into one of the internal organs.

The same complication may eventuate when the abscess forms on the right side. Here the principal point of rupture is into the right lung, the contents of the abscess being suddenly evacuated, in some cases without much warning, and nature thereby effecting a cure. Such a termination however is not desirable as healing will take place quicker by surgical means.

There are some abscesses which are exceedingly insidious, it often happening that patients are sent home with a fever associated with general loss of health and weight, where the existence of a deep seated abscess may not even be suspected; but in which the symptoms of hepatic abscess suddenly occur and clear up the case: or the correct diagnosis may obtrude itself by the sudden rupture as above described.

PLAGUE.

Plague is a disease of very great antiquity; its ravages and symptoms have been described with remarkable accuracy by the old historians, such as Procopius. Not many years ago it appeared to be a disease of historical interest only, but the present pandemic, which commenced about 1894, has made it a subject of the greatest importance to the inhabitants of the British Empire. It was in March 1894 that it first became prominent in Canton, and thereafter it spread to Hongkong, Macao and Pakhoi, and so along the whole of the Southern China Coast. It probably arrived in Bombay in March 1896, but it was not until the end of September that

it became noticeable in that part of the native city known as Mandvi, in which the great grain supplies are collected, and wherein consequently there is an enormous rat population. In October of the same year the presence of the pestilence was officially acknowledged. Everything which the limited knowledge of the subject at that time suggested, was done to check its spread; but, in spite of all efforts, the pestilence spread from the infected city throughout the greater portion of the Peninsula, and while its ravages of late years have not been so terrible as at its first appearance, yet the disease still takes its annual toll of human life, and it has

apparently become one of the endemic diseases of India. According to the official figures, Plague since its appearance has been responsible for more than seven and a half million deaths within the limits of the Indian Empire. These figures should perhaps be increased by about fifteen to twenty per cent., due to defect in the registration of the causes of deaths and also to the fact that the disease often simulates other maladies for which it is likely to be mistaken by an uneducated population.

Plague is an acute infection of the blood by a bacillus which was discovered by Kitasato in Hongkong in 1894. It generally affects its entry by the skin, on which it is deposited by the rat-flea. At the site of deposit a small pustule is occasionally found which soon forms a superficial ulcer. In such cases inflammation and distention of the lymphatics may be noticed running from the neighbourhood of the small and painful ulcer to the nearest group of glands. These will be found to be enlarged and exquisitely tender, the tenderness being out of all proportion to the size of the glandular enlargement and to the amount of local inflammation. This glandular enlargement is called the Bubo, which has given the name to the most common form of the pest—Bubonic Plague.

With the appearance of the Bubo, or even a day or so before it, there is evidence of a general infection of the system, in the shape of extreme prostration, mental confusion, a furred tongue, and fever which is generally high. The pulse is accelerated, and while at the outset, especially in full-blooded muscular adults, it is likely to be full and bounding, there is sooner or later, generally soon, evidence of early failure of the strength of the cardio-vascular system. The pulse becomes quicker, smaller, and the heart sounds feeble. As the case progresses, the primary ulcer will enlarge and become of an angry appearance, the Bubo will also enlarge and the tissues around the inflamed lymphatics will be swollen and œdematous. To this variety the term "cellulo-cutaneous plague" has been applied. The spreading ulcer, which is really a local gangrene, has been described as the plague "carbuncle"; these forming on the skin of those affected were often referred to by old historians as a prominent feature in many ancient epidemics.

These cases however are somewhat uncommon. The usual variety met with is the Acute Bubonic Plague. In this the patient is attacked with fever, and all the general symptoms of an acute infection, and on the first, second or sometimes the third day of the illness the characteristic bubo appears. The common site is among the glands of the groin, for the reason that these glands receive the lymphatics from the lower limbs and from the lower portion of the trunk up to the level of the navel, a larger area than that drained by any other group of glands. Other sites for Bubo formation are the arm-pits, the glands of the neck, those about the angle of the jaw and below the chin, and very rarely the little gland on the inner side and just above the elbow, and the small glands behind the knee joint. In some cases, generally in association with Buboes in the groin, the deep glands of the abdomen can be felt to be enlarged.

These Plague Buboes are of different kinds and it is a matter of some importance in connection with treatment and the outlook as regards recovery, to recognise the type of Bubo present in each particular case. The common variety is the "softening bubo." The enlargement increases somewhat rapidly and the hard swelling gives place to a soft doughy mass around which is a limited amount of serous effusion into the subcutaneous tissues. If the patient lives till the fifth day or thereabouts this bubo will feel like a tightly stuffed pin-cushion, or may give the experienced examiner the signs that the contents are of a fluid nature. On incision, pus and shreds of the disorganised gland will be evacuated, and under suitable treatment the cavity, though large, will heal up within a week or so. When these softening Buboes are allowed to rupture spontaneously a large foul cavity is produced; such are not unfrequently encountered among the poor, who have not received adequate attention during the stress of a plague epidemic.

Another variety of bubo obtains when the glands inflame and harden, the inflammation being so acute that the blood supply of the part is obstructed and the whole of the affected area sloughs out, leaving a large superficial ulcer of a very unpleasant appearance. These buboes are found where the inflamed glands are bound down beneath tense tissues, as in front of the ears and in the region of the groin. To this kind the term "indurated bubo" has been applied. Another variety the "œdematous bubo" occurs in the neck and the arm-pit and in them the serous effusion into the tissues around the glands, present to a less extent in the common type is the essential feature. The whole arm-pit or the side of the neck may be distended by the accumulation of fluid under the skin. It is an extremely distressing kind of bubo, as the pain is great and nearly all the patients die. Also there is a rare kind the "hard late bubo," which appears after about a fortnight in cases simulating typhoid fever, and lastly there are some soft buboes which abort and shrink with the rapid subsidence of the fever—the "shrinking bubo." The fever continues from the outset with slight emissions; it is generally about 103° to 104°, but it may rise to a great height from almost the initial rigor. On the third day the temperature tends to approach the normal, and almost immediately rises again. Should it rise to a point above that of the maximum temperature preceding the remission the outlook is bad; but in cases which are likely to do well it rises to a point which is less than that of the preceding maximum, and after about three days gradually falls to normal, with slight daily oscillations depending on the amount of the suppuration in the buboes and their local condition.

It is to be understood that this disease is of such great virulence to human beings, on account of the early appearance of the plague bacillus in the blood-stream, that there are many instances in which death occurs before the bubo has had time to undergo the changes described above or even to form. The more acute cases are also liable to be a typical in their mode of onset. Some are taken with a wild delirium in which they are likely to attack those about

them: others suffer from vomiting of blood followed by rapid failure of the heart and death: pregnant women miscarry and practically all of them die: and lastly there are cases where the general and local symptoms are slight and yet failure of the heart may suddenly ensue within a few hours of the onset. These so-called "fulminant" cases are generally met with at the commencement of every epidemic: in some of the descriptions of mediæval epidemics they seem to have been in the majority, and it is on account of these that plague epidemics appear so terrible to the occupants of the plague-stricken town. Fortunately, however, there is a large majority of cases which allow some scope for medical skill. The condition of the patient after the full development of the symptoms is always one which gives rise to great anxiety. The mental condition becomes dulled, which, while it mitigates considerably the distress of the sufferer, is nevertheless an indication of the action of the plague poison on the nerve centres. The eyes are suffused and often acutely congested. There may be cough, which is a bad sign as it indicates either a secondary pneumonia or the onset of an acute bronchitis, the direct result of the failure of the heart. If the latter progresses the breathing becomes more rapid, the pulse weak and almost uncountable at the wrist, the skin cold and clammy, and towards the end covered by profuse perspiration: finally, the breathing becomes irregular, and after several long-drawn gasps the patient breathes his last.

In other cases however improvement starts about the fourth day, the temperature gradually falls, and the mind clears: the bubo suppurates in due course and heals up, and the patient passes into a slow convalescence, but which is sometimes retarded by the formation of chronic abscesses, boils, attacks of heart failure or of palpitation: or ulcers of the eyeball with infection of the whole globe and consequent loss of sight. Some recover with permanent mental enfeeblement, or persistent tremors of the limbs with difficulty in speaking with clearness.

Septicaemic Plague.

This term is applied to certain forms of acute plague where buboes do not form, or where there is uniform but slight enlargement of glands in various parts of the body with symp-

toms of a general blood infection. The term is misleading, inasmuch as most cases of acute bubonic plague are really septicaemic from the outset. These cases are either acute, ending fatally about the third day or sooner: or are sub-acute, with symptoms simulating typhoid fever, ending fatally in about a fortnight. In the acute cases large dusky patches of blood-effusions beneath the skin, the so-called plague spots, are sometimes found; and there may be hæmorrhages from the stomach or bowels.

Pneumonic Plague.

In this variety the plague bacillus proliferates in the lung and causes rapid consolidation of large patches of the lung tissue scattered irregularly throughout the organs; with a considerable amount of œdema, so that the lungs are engorged with blood, are large and heavy, and the bronchial tubes filled with reddish frothy fluid which contains the plague bacillus in almost pure culture. The fever is very high and the interference with respiration immediate, and death occurs from the second to the fourth day. A curious fact about pneumonic plague is that one such case is liable to give rise to others of the same type.

Treatment of the Disease.

No serum or antitoxin has so far proved of value in diminishing the mortality of the sick. Much can, however, be done by medical treatment. Absolute rest is required and the patient should not even be allowed to sit up in bed. Drugs which act as heart stimulants are required almost from the outset, and frequently these have to be administered by the skin as well as the mouth. The buboes should be fomented till they soften, and incised as soon as fluid is formed. For the pneumonic condition the administration of oxygen gas gives relief. This can be obtained in India without much difficulty. Careful nursing is essential, and fluid nourishment must be given regularly in an easily assimilable form, and complications have to be met as they arise. As regards prophylaxis by means of Haffkine's Plague prophylactic which is manufactured in enormous quantities at the Bacteriological Government Laboratory at Parel, it may be said that its use gives a threefold chance of escape from attack and a reduction of case mortality by fifty per cent.

DENGUE FEVER.

Dengue fever, otherwise known as Dandy fever or Breakbone fever, is rather common in India and is generally present in the larger towns, but as it appears in manifold forms and various writers describe it differently, its identity is not always recognised; and, therefore, by many medical men is thought to be less common than it really is. On occasions it gives rise to very wide-spread epidemics. In 1902 there was an extensive epidemic on the eastern side of the Indian Peninsula, and quite recently there has been a bad outbreak in Calcutta. It is more common during the rainy season.

The onset is abrupt, with fever, slight sore throat producing cough, rapidity of the pulse,

sometimes a red rash which is so fugitive that it is often overlooked, and intense pain. These pains constitute the patient's chief complaint. They are generally pains in the bones, or in the small of the back, or in some of the joints either large or small. Sometimes there is no complaint of pain in the limbs, but there is intense pain behind the eyes. The fever lasts for three or four days, during which in rare cases there may be further symptoms due to the appearance of a pleurisy or even a pericarditis. Sometimes there is intense shooting pain into the little finger. Though the intensity of the symptoms may give a very serious aspect to the case, yet a fatal issue is almost unknown. After the

four days of intense suffering the fever subsides somewhat abruptly, and at about this time a second rash appears, most marked over the shoulders and neck, and on the backs of the arms, or else an universal rash. It is of a dark red colour, often very like the rash of scarlet fever, or it may be like that of measles. With its appearance the more severe symptoms subside. During convalescence the patient is much depressed, and the pulse remains unduly rapid. Sometimes also pain starts again in one of the joints, or he is crippled by stiffness of the back or of several of the joints. After a shorter or longer period, from two days to ten, a second attack of fever and pain comes on which runs the same course but as a rule less severe and

prolonged; in very rare cases there is a third attack.

There is no drug which will cut short the disease. From its likeness to rheumatism the salicylates are generally used, and perhaps relieve the pains. This drug should be combined with an ordinary fever mixture: large doses of bromide should be given for the headache, and the excruciating pains must be treated with morphia.

It is often impossible to distinguish the malady from influenza until the appearance of the rash.

It is believed that the poison is conveyed by the bites of a mosquito, and that this poison has characters which are analogous to the virus of Yellow Fever.

CHOLERA.

This is one of the most important diseases of India, having been endemic therein for many hundreds of years. It is always present in the country, and sometimes extends over large districts generally from some crowded centre such as the site of a pilgrimage, from which it is dispersed over the country-side by the returning bands of pilgrims. The deaths in British India from this disease in 1911 numbered three hundred and fifty-four thousand and in the following year four hundred and seven thousand. The disease is of special importance to the numerous pilgrims both on going to and returning from Mecca.

It is essentially a water-borne disease and the exciting cause is the "comma bacillus" discovered by Koch, so called from its shape when isolated and stained. The dejecta of a person suffering from the disease, when contaminating the soil, are liable to get washed by the rains into some water-supply, which may become the source of almost unlimited infection. Such contaminated drinking water is rendered innocuous by boiling, or filtration through a Pasteur-Chamberland filter. The importance of Koch's discovery, therefore, lay in the recognition of the fact that the poison was essentially water-borne. It can also be conveyed by flies settling on food.

The disease has an incubation period of from two to seven days. After a premonitory diarrhoea with colicky pains lasting for half a day or longer, the nature of the illness is announced by violent purging and vomiting, the former having the peculiar character of rice-water. The poison may be so intense that death takes place before the purging appears, the so-called "cholera sicca." In the common form collapse is early and marked, the extremities are blue and cold, the skin shrunken, the heart weak, the surface temperature below normal, though the temperature taken in the mouth shows high fever to be present. There is a curious pinched expression of the face with deeply sunken eyes, and the patient endeavours to communicate his wishes or fears in a hoarse whisper. He is further distressed by painful cramps in

the muscles of the calf and abdomen, and there is suppression of the functions of the kidneys. Death generally takes place in this the algid state. Should the patient survive he passes into the stage of reaction, the unfavourable symptoms disappearing and gradually passing into convalescence. In some of these cases which give hopes of recovery there is a relapse, the conditions of the algid state re-appearing and death taking place. It has recently been recognised as a cause of the dissemination of the disease, that patients who have recovered will continue to discharge the bacillus for many weeks.

The prevention of cholera lies in attention to water supplies, and in boiling and filtering as a matter of routine in Indian life. All the discharges from the sick should be treated with disinfectants, and soiled clothing and linen destroyed. People who have to tour in cholera-stricken districts, or who go on shooting excursions, or who find themselves in the midst of a cholera outbreak should undergo inoculation with Haffkine's preventive vaccine. Two inoculations are required, the second being more intense in its effects. The temporary symptoms which may arise after the inoculation are sometimes severe, being always more marked than after inoculation against typhoid, but the protection afforded more than makes up for the temporary inconvenience endured.

During the cholera season the mildest cases of diarrhoea should be brought for treatment to a physician, as such persons are more liable than others to contract the disease.

Treatment mainly resolves itself into meeting the extreme collapse with stimulants and warmth. There is great temptation to administer opium but in some cases this is not unattended with danger, and in others there is no capacity left in the patient for the absorption of drugs administered by the mouth. The mortality has, however, been reduced by the injection of saline fluid into the skin or directly into the veins, and also by the introduction of saline fluid of particular strength into the abdominal cavity,

KALA-AZAR.

This is a slowly progressive disease associated with great enlargement of the spleen and some enlargement of the liver, extreme emaciation, and a fever of a peculiar type characterised by remissions for short periods, and due to infection by a parasite of remarkable characters which have only recently been worked out. It is attended with a very high mortality, about 96 per cent., and has up to the present resisted all methods of treatment, although some patients appear to improve for a time, only in the majority of cases to relapse later.

It is endemic in Assam, from which it has invaded Bengal, and is now often seen in Calcutta. It is also fairly often met with in Madras, though it is said that the cases are imported ones. It is very rarely seen in Bombay, and then only in immigrants from infected localities, though there appears to be a mild endemic centre in Jabalpur in the Central Provinces; so it is likely to be more frequently met with on the western side of India. It has caused great mortality among the coolies on the tea-plantations of Assam, especially among the children; but under the recent measures of prophylaxis which have been put into force since knowledge has been acquired about its real nature and method of spread, the ravages of the disease are likely to be limited. It is very rare among Europeans and then almost entirely among those who have been long in India or who have been born and bred in the country.

Infection seems generally to start in the cold weather. There is fever with rigors, and progressive wasting and loss of energy. The temperature chart is a curious one, the fever showing two remissions during the twenty-four hours. Diarrhoea is common, especially during the later stages of the disease. The

spleen enlarges early and is generally of enormous size producing bulging of the abdomen. A remarkable feature is the tendency to the formation of ulcers, which in many cases, especially in children, takes the form of a gangrenous ulceration of the mouth and cheek. Death usually occurs from some intercurrent inflammatory condition, often pneumonia.

The parasite is found in the spleen and liver during life, and can be obtained by puncture of these organs. As thus obtained it is a minute round body of special characters. In this state it is known as the Leishman-Donovan body from its discoverers. This small body has been cultivated by Leonard Rogers in suitable media and under low temperatures, and found to develop into a flagellated, that is tail-possessing, organism. How this peculiar organism develops outside the human host is not yet completely known. It is certainly a house-infection, which accounts for the manner in which whole families have been swept off, one member after another. Its progress has been stayed by moving families from their infected houses and burning down their former quarters. This, and other facts connected with its spread, have suggested that the agent for conveying the poison from man to man is the common bed-bug, and Patton has succeeded in developing the flagellate stage in this creature when fed on the blood of the sick.

There is a severe form of ulceration of the skin known as "Delhi Boil" from which organisms very similar to the Leishman-Donovan body were obtained many years ago. These bodies have also been cultivated outside the human host and found to develop into a flagellated organism. The two parasites, though closely allied, are nevertheless distinct.

INFLUENZA.

During 1918 a peculiar and exceptionally widespread epidemic of influenza appeared, which affected the inhabitants of practically every continent. This epidemic not only caused, directly or indirectly, a very large number of deaths, which in India alone were computed to exceed five millions, but left behind it a legacy of minor ailments with consequent national debility. The economic effect through the disorganization of trade cannot be estimated but must have been very great. Although previously severe and worldwide epidemics have been known to occur, in none were the spread and mortality so alarming as in the epidemic of 1918. So far as it affected India, the epidemic of the Summer months assumed a mild form of the disease. After an apparent departure it reappeared in a virulent and very fatal form during the Autumn months and then seemingly disappeared at the end of the year. In fact this was not so as small localised epidemics have occurred and sporadic cases have continued throughout 1919.

A report on the outbreak by Major Norman White, I.M.S., Sanitary Commissioner with the Government of India, states that there is no doubt whatever that the virus of influenza is a living germ capable of being transmitted directly from man to man. The nature of this germ is still a matter about which dogmatic assertions are unwarranted. The so-called influenza bacillus was certainly, almost constantly present in the cases investigated during the second severe epidemic wave in India; it does not appear to have been demonstrated so frequently during the early mild stages of the epidemic. Whether the influenza bacillus is the true cause of the disease or merely a constant concomitant is a question that is open to doubt. Recent observations that have been made in France indicate the possibility that the true cause of the disease is in some stage of its life history ultramicroscopic, or in other words a germ so infinitely minute that the highest powers of the microscope are unable to demonstrate it. Be the primary cause of in-

fluenza what it may, the mortality of the recent outbreak was almost entirely due to secondary infections with other disease-producing germs, notably the pneumococcus, the germ which commonly causes pneumonia. The pneumococcus was constantly associated with fatal cases in India. Much of the mortality in England and other European countries was ascribed to secondary infection with a streptococcus—another disease-producing germ. No constant association of germs of this latter class with severe influenza cases was noted in India though its occurrence has been reported, for example for Assam. With regard to the relative incidence of the disease among various classes of the population, our information is at present meagre. Among troops serving in India, the incidence of the disease was greater among British than among Indians, though the Indian mortality rate was very considerably in excess of the British. For British troops the hospital admission rate per thousand of strength was 218.2 for influenza and 3.1 for pneumonia, as compared with 135.6 and 20.2

for Indian troops. The death-rates for British troops were 8.96 for influenza and 0.65 for pneumonia, as compared with 15.21 and 6.18 respectively, for Indian troops. The normal incidence of pneumonia among Indian troops is nearly four times that among British troops. A study of the figures hitherto received indicates that influenza as experienced in India was especially fatal between the ages of 10 and 40, and that females suffered to a somewhat greater degree than males.

Influenza is a disease, which exhibits an intense infectivity and an incubation period which is relatively very short, *i.e.*, from 6 to 48 hours. It is commonly believed that the disease is spread by the infected secretions of the throat and nose of infected persons, finding lodgment in the nose and throat of uninfected people. The commonest means by which this occurs is by coughing and sneezing, especially in confined spaces. Methods of prevention then consist of preventing communication of infection by these channels.

Drug Culture.

Two monographs on the cultivation of drugs in India, by Mr. David Hooper, of the Indian Museum, Calcutta, and by Mr. Puran Singh, of the Indian Forest Department, Dehra Dun, have lately been published. Mr. Hooper, in his paper, states that one-half of the drugs in the British Pharmacopœia are indigenous to the East Indies, and nearly the whole of the rest could be cultivated or exploited. The following are given as those that could be grown in quantity and as worthy of the attention of cultivators and capitalists:—

Belladonna, most of which is still imported, grows well in the Western Himalayas from Simla to Kashmir, the Indian-grown plant containing 0.4 to 0.45 per cent. of alkaloid.

Digitalis is quite acclimatised on the Nilgiris growing there without any attention. The Madras Store Department obtains all its requirements from Ootacamund, and the leaf has been found equally active to that grown in England.

Henbane is a native of the temperate Himalayas from 8,000 to 11,000 ft. It was introduced into the Botanic Gardens, Saharanpur, in 1840, and it has been steadily cultivated there up to the present time, and the products supplied to medical depots satisfy the annual demand.

Ipecacuanha has been raised with a small measure of success in the hilly parts of India, and it only requires care and attention to raise it in sufficient amount to make it commercially remunerative.

Jalap-root grows as easily as potatoes in the Nilgiris, and there is no reason why the annual requirements (about 4,000 lbs.) for the Medical Stores of Bengal, Bombay and Madras should not be obtained from Ootacamund.

Mr. Puran Singh discussed the subject in a number of the "Indian Forester in 1914": he states that most of the drugs in the British Pharmacopœia grow wild in India, and that there is already a large export trade for some of them. He adds, however, that materials collected at

random cannot be expected to fetch full prices, as they seldom come up to standard quality, and he adds: "The few drugs that are not indigenous to India could easily be made to grow in some part or other of this vast land. The great advantage accruing from the systematic cultivation of drugs is that a regular supply of genuine drugs of standard quality is assured. The variation in the quality of wild-grown drugs is sometimes a very serious drawback to finding a profitable market for them. The quality of *Podophyllum Emodi* growing wild in India is an illustration in point. This plant was discovered by Sir George Watt in the year 1888, and now, even after twenty-four years, in which it has been shown to be identical with the American drug that is being employed for pharmaceutical purposes, it still remains unrecognised by the British Pharmacopœia, which, as explained by the "Chemist and Druggist" some time ago, is solely due to the uncertainty which still exists as to its physiological activity".

Mr. Singh also points out that the Indian consumers of medicine depend mostly on herbs growing wild in the Forests, the more important of these probably numbering at least 1,000. This inland trade is very large; the possibilities in the Punjab alone being put at Rs. 50,00,000. He mentions saffron, liquorice, and salep as products exotic to India, whose cultivation in this country looks full of promise. Mr. Singh suggests that a complete survey be made of the extent of the inland trade in medicinal products found growing wild in Indian forests in order to arrive at the figures of annual consumption, and that the forest areas where the most important drugs grow should be preserved. Inquiries should be instituted as to the best methods of cultivation, and if need be, the means of extending the artificial propagation. It is to provide data to induce the private capitalist to embark on such enterprises that Mr. Singh advocates the formation of some body to go into the matter. He suggests that India is well worthy of attention by those in this country who are interested in extending the culture

of drugs in the British Empire. The Forest Department has already begun the cultivation of Indian podophyllum-root in the Punjab, United Provinces and the North-Western Frontier, and several maunds of dried rhizome are sold annually for local consumption. Mr. Hooper also shows that a start has been made in regard to the cultivation of belladonna, henbane and digitalis. One of the principal difficulties to be overcome is to ensure a ready market, and there is also always the danger of over-production to be considered.

Essential Oils.

SANDALWOOD OIL is, by far the most, important perfumery product of India. The sandalwood tree is a root parasite, obtaining its nourishment from the roots of other trees by means of suckers. It grows best in loose volcanic soil mixed with rocks, and preferably ferruginous in character. Although in rich soil it grows more luxuriantly, less scented wood is formed, and at an altitude of 700 feet it is said to be totally devoid of scent. The best yield of oil is obtained from trees growing at an altitude of 1,500 to 4,000 feet, but the tree requires plenty of room so as to enable it to select vigorous hosts to feed it.

PALMAROSA OIL, also known as Indian geranium or "Turkish geranium oil" is another of the principal perfume products of India. It is derived from the grass, *Cymbopogon Martini*, which is widely distributed in India, where it is known as "Motya." Gingergrass is an oil of inferior quality, possibly derived from older grasses or from a different variety of the same species. Both oils contain geraniol, the proportion in palmarosa being from 75 to 95 per cent. and in gingergrass generally less than 70 per cent. These oils are used in soap, perfumery, and for scenting hair oils and pomades.

LEMONGRASS OIL is derived from *Cymbopogon citratus* and *Cymbopogon flexuosus*. The former is a native of Bengal, and is largely cultivated all over India, but the oil distilled on the Malabar Coast and Cochin is derived principally from *C. flexuosus*.

VETIVER, OR CUS-CUS, is a perennial grass, *Vetivera zizanioides*, found along the Coromandel Coast and in Mysore, Bengal and Burma, in most heavy soil along the banks of rivers. The leaves are practically odourless and only used for thatching and weaving purposes. The roots are used in perfumery and in the manufacture of mats and baskets.

THE MALABAR CARDAMOM, Elelettaria cardamomum, is the source of the seeds official in the British and other Pharmacopœias. Cardamom oil of commerce is, however, not distilled from this variety on account of the high price, but is obtained almost exclusively from the long cardamom found growing wild and cultivated in Ceylon. The oil is used medicinally as a carminative and is also employed by perfumers in France and America.

COSTUS ROOT (the root of *Saussurea lappa*) is a native of Kashmir, where about 2,000,000 lbs. are collected annually. It is exported in large quantities to China where it is used for incense. It is also used to protect shawls and

clothes from the attacks of insects. Its odour resembles that of orris root.

BLUMEA BALSAMIFERA is the source of the Nagai camphor used in China for ritualistic and medicinal purposes. This shrubby composite is found in the Himalayas and is indigenous to India. It is widely distributed in India and is used by the natives against flies and other insects.

EUCALYPTUS plantations are situated chiefly in the neighbourhood of Ootacamund, Coonor, and Wellington, at elevations varying from 5,500 to 8,400 feet, the best being at from 7,200 to 8,000 feet. The climate of this region is fairly cool, equable and moist, with a well-distributed rainfall of about 50 to 80 inches; although frosts occur, the winters are mild on the whole, and snow is unknown. The soil, a red clay overlying gneissose rock, is rich and deep in some parts, shallow and poorer in others. A large factory is being built for the distillation of eucalyptus oil at Ootacamund. It is believed there is a considerable future for the undertaking, provided a sufficient supply of the leaves is available.

Manufacture of Quinine.

Government Cinchona plantations were started in India in 1862 from seed introduced by Sir Clements Markham from South America, of which the plant is a native. There are two main centres, Darjeeling and the Nilgiri Hills. In both localities a portion of the area is owned by tea or coffee planters, and the bark they produce is either sold to the Government or exported. Several species of cinchona are cultivated in India: namely, *Cinchona succirubra* (red bark), *C. calisaya* and *ledgeriana* (yellow bark), and *C. officinalis* (crown bark). The commonest species in Darjeeling is *C. ledgeriana*, and in Southern India *C. officinalis*. A hybrid form is also largely grown and yields a good bark. At the Government factories both cinchona febrifuge and quinine are made. Thanks to these factories, practically no quinine is nowadays imported for Government purposes.

THE REPORT OF THE GOVERNMENT CINCHONA plantations and factory in Bengal for 1917-18 stated that the total expenditure of all sorts from 1900-01 to 1917-18 is nearly Rs. 47,00,000; the total revenue Rs. 77,73,700 and the surplus Rs. 30,73,700. In addition to this surplus assets are 2,514 acres Cinchona at Rs. 5,78,057; 3,142 acres afforested at Rs. 2,41,703; factory products in stock Rs. 4,53,532, bark and oil Rs. 40,000, or a total of over 13 lakhs all at cost price. While the financial results may be claimed as satisfactory, still more so is the fact that the Department has so far met the great demand for quinine. During the three years 1915-18 over 192,000 lbs. have been issued, a quantity exceeding the total issues for 22 years from 1887, when quinine was first made in the factory, to 1908. A great part of the extra demand has been for the armies, so that the department can claim, in so far as the supply of quinine has prevented the disablement of large numbers of men by malaria in fever-stricken regions, to have given valuable aid in the war. One of the most

far-reaching measures of modern times for the benefit of the health of the people of India has been Sir George King's system of having quinine, locally produced from cinchona, made up in 7-grain packets and sold (since 1896-7) for a quarter anna (one

farthing) at every post office in India. This scheme has proved a commercial success, and has been of immense benefit to the inhabitants of fever-stricken tracts. In the year 1912-13, 10,694 lbs. of quinine were sold at the post offices.

DRUGS MANUFACTURE COMMITTEE.

In 1918 the Board of Scientific Advice accepted a proposal for the formation of a Drugs Manufacture Committee to investigate the possibilities of the cultivation of medicinal plants in India and the manufacture of drugs from them on a commercial scale. The Government of India acted on this recommendation and appointed a Committee whose primary functions will be to investigate. (1) the possibilities of the cultivation of medicinal plants in India, and (2) the manufacture of drugs from them on a commercial scale.

With regard to (1), the Committee will consider the various lines on which the investigation can best be undertaken, while, in connection with (2), it will consider the present position as regard the manufacture of drugs in India from indigenous products and the Indian requirements of such drugs as have until now been imported from abroad. As soon as experience has proved that any drugs can be manufactured at Government Medical Store Depots at a sufficiently low cost, private enterprise will be invited to undertake its manufacture. It was announced in February 1920, that considerable progress had been made and that several articles which before the war were imported were being manufactured in India.

The Secretary of the Drugs Manufacture Committee should be addressed at the office of the Director-General, Indian Medical Service.

Intoxicating Drugs.

Among the drugs which are of great medicinal value, but of which the misuse has been a source of crime and disease among the people of India, there are, in addition to cocaine, **Opium** (for details of the trade see article on opium) which is the oldest and the best known. A resolution of the Government of India, dated August 19, 1912, adopted the policy of suppressing all public gatherings for the purpose of smoking opium and of prohibiting all manufacture of opium smoking preparations save by an individual of a small quantity for his own private consumption. The form which legislation should take was left to the local Governments, provided that

an assembly of three or more persons for the purpose of smoking opium should be made illegal. In adopting this policy Government distinguished between opium smoking and opium eating. "Opium, said the Resolution, as taken in moderation by the average Indian is eaten either as a mild stimulant, or as a prophylactic against malaria, or for the relief of pain or in the treatment of diabetes. It is in fact a household remedy for many ills, and it is safe to say that as a national habit the eating of opium is less injurious than is the consumption of alcohol in many other countries. Centuries of inherited experience have taught the people of India discretion in the use of the drug, and its misuse is a negligible feature in Indian life. These conclusions were accepted by the Shanghai Commission (of 1909) who, while they recommended the gradual suppression of the practice of opium smoking, refrained from advising the abandonment of the policy of regulation by which the practice of opium eating in the country has hitherto been successfully kept under restraint."

Next to opium and cocaine, the most common drugs are the three **hemp** products which are freely used throughout British India. The Indian hemp is a shrub growing wild in the hills and lower elevations, and cultivated in the plains. The leaves of the wild plants, collected and dried in the sun, constitute **bhāng**, a sort of green tea, which is mixed with boiling water and drunk as an infusion. This has an exhilarating effect, followed by a feeling of intoxication. When the female plants are cultivated they exude a resinous juice, which causes the flowering tops to stick together. Collected under these conditions the tops are rolled in the hands or pressed under foot; the first process produces "round ganja," and the second "flat ganja." **Ganja** is a stronger form of hemp than bhāng, and is used for smoking. The third form of Indian hemp is **charas**, the resinous secretion of the plant that develops when it is grown at certain altitudes. Large quantities of charas are produced in Chinese Turkestan, and enter India by way of Leh. This is sold over the northern part of the country, and used for smoking purposes.

The Cocaine Traffic.

The form of cocaine chiefly used in India is Cocaine Hydrochloride. This salt forms light shining crystals, with a bitterish taste, and is soluble in half its weight of water. The alkaloid cocaine—of which this is a salt—is obtained from the dried leaves of the *Erythroxylon* Cocaine which grows in Bolivia, Peru, Java, Brazil and other parts of South America. The leaves are most active when freshly dried and are much used by the Natives as a stimulant. Tea made from them has a taste similar to green tea and is said to be very effectual in keeping people awake. In India the Coca plant seems never to have been cultivated on a commercial scale. It has been grown experimentally in the tea districts of Ceylon, Bengal and Southern India and has been found to produce a good quality and quantity of cocaine. As the plant has not been seriously cultivated and as there is no possibility for the present of the drug being manufactured in India, no restrictions have as yet been placed on its cultivation.

Spread of the habit.—The cocaine traffic in India which seems to be reaching alarming proportion in spite of legislation and strict preventive measures is of comparatively recent growth; though it is impossible to estimate how widespread it was in 1903 when the Bombay High Court for the first time decided that cocaine was a drug included within the definition of an intoxicating drug in the Bombay Abkari Act. Since that date the illegal sale of cocaine in India has largely increased and the various provincial Excise Reports bear witness to the spread of the "Cocaine habit." The consumers of the drug, which is notoriously harmful, are to be found in all classes of society and in Burma even school children are reported to be its victims; but in India as in Paris the drug is mostly used by prostitutes or by men as an aphrodisiac. The habit has spread chiefly to those classes which are prohibited by religion or caste rules from partaking of liquor and the well known Indian intoxicating drugs.

Imports from Europe.—Cocaine and its allied drugs are not manufactured in India, but are imported from Germany, France, England and Italy. Most of the drug which is smuggled into India, comes from Germany and bears the mark of the well-known house of E. Merck, Darmstadt. This firm issues cocaine in flat packets of various sizes ranging from 1 to 3 ounces which are easily packed away with other articles and greatly favour the methods of smugglers. Owing to its strength and purity cocaine eaters prefer this brand to any other in the market. Restrictions on export from Europe have been under consideration for some time but as yet no international scheme devised to that end has been agreed upon.

Smuggling.—So far as the cases already detected show, the persons who smuggle the drug by sea from Europe and places outside India, into India, are chiefly sailors, stewards, firemen and sometimes engineers and officers of the Austrian Lloyd and Florio Rubattino S. S. Companies. The ports through which cocaine enters India are Bombay, Karachi, Calcutta, Madras, Marmagao and Pondicherry. The main inland distributing centres are Delhi, Lucknow, Meerut, Lahore, Mooltan, Surat and Ahmedabad. Delhi especially is notorious

for the cocaine trade. Great ingenuity is employed in smuggling cocaine through the Custom houses. It is packed in parcels of newspapers, books, toys and piece-goods and in trunks which have secret compartments. The retail trade in the towns is very cunningly organized and controlled. In addition to the actual retailers, there is a whole army of watchmen and patrols whose duty is to shadow the Excise and Police Officials and give the alarm when a raid is contemplated. Owing to the war and the consequent diminution of supplies the cocaine hawking trade has practically disappeared in Bombay. Since the commencement of the war several cases of importation of Japanese cocaine have been detected, the importers being Chinese and Japanese sailors. Chinese opium smugglers bring cocaine from Japan here to exchange it for Indian opium, which is smuggled into China. Most of the cocaine seized bears the mark "Sanscido & Co., Kobe." In 1917-18 the largest seizures made were one of 8,670 grains by the Excise Department and one of 8,750 grains by the Customs Department.

Price.—The amount seized is either given to Hospitals in India or destroyed. It is no longer possible to buy cocaine from any betelnut seller as it was ten years ago, but scores of cases in the Police Courts show that the retail trade thrives, though to a diminished extent, in Bombay. High profits ensure the continuance of the trade. At present the English quotation varies from 36 to 40 shillings per oz. and the price as sold by licensed chemists in India varies from Rs 27 to Rs. 31 per oz. Owing to the war and the consequent stoppage of illicit importations from Austria and Germany it is not possible to buy the smuggled drug from the wholesale dealers for less than Rs. 100 to 120 per ounce and when sold by the grain the price realized varies from Rs. 400 to 425 per ounce. These profits are further enhanced by adulteration with phenacetin and inferior quinine.

The law in regard to Cocaine.—This varies in different provinces. A summary of the law in Bombay is as follows: No cocaine can be imported except by a licensed dealer and importation by means of the post is entirely prohibited. The sale, possession, transport and export of cocaine are prohibited except under a license or permit from the Collector of the District. A duly qualified and licensed Medical practitioner is allowed to transport or remove 20 grains in the exercise of his profession; and as far as 6 grains may be possessed by any person if covered by a *bona fide* prescription from a duly qualified Medical practitioner. The maximum punishment for illegal sale, possession, transport, etc., under Act V of 1878 as amended by Act XII of 1912 is as follows: Imprisonment for a term which may extend to one year or fine which may extend to Rs. 2,000 or both and on any subsequent conviction imprisonment for a term which may extend to 2 years or fine which may extend to Rs. 4,000 or both. The law in Bombay has been further amended so as to enable security to be taken from persons who have been convicted of cocaine offences. The new Act also contains a section for the punishment of house owners who let their houses to habitual cocaine sellers.

INDIAN TOBACCO.

The tobacco plant was introduced into India by the Portuguese about the year 1605. As in other parts of the world, it passed through a period of persecution, but its ultimate distribution over India is one of the numerous examples of the avidity with which advantageous new crops or appliances are adopted by the Indian agriculturist. Five or six species of *Nicotiana* are cultivated, but only two are found in India, namely, *N. Tabacum* and *N. rustica*. The former is a native of South or Central America, and is the common tobacco of India. About the year 1829 experiments were conducted by the East India Company towards improving the quality of leaf and perfecting the native methods of curing and manufacturing tobacco. These were often repeated, and gradually the industry became identified with three great centres: namely, (1) Eastern and Northern Bengal (more especially the District of Rangpur); (2) Madras, Trichinopoly, Dindigul, Coconada and Calicut in Southern India; and (3) Rangoon and Moulmein in Burma. Bengal is the chief tobacco growing Province, but little or no tobacco is manufactured there. The chief factories are near Dindigul in the Madras Presidency, though, owing to the imposition of heavy import duties on the foreign leaf used as a cigar wrapper, some cigar factories have been moved to the French territory of Pondicherry.

The Monghyr factory, which commenced business in 1908, had an output in 1918-19 of 2,024 million cigarettes and 144,000 lbs. of smoking tobacco.

The question of improving the quality of Indian tobaccos has received the attention of the Botanical section of the Agricultural Research Institute, Pusa, and three Memoirs have been published recording the results of investigations in that direction. The immediate problem at Pusa is the production of a good cigarette tobacco. Many attempts have been made in the past to introduce into India the best varieties of cigarette tobacco from America, but the results have been disappointing. It is now hoped to build up by hybridization new kinds of tobacco, suited to Indian conditions of growth, which possess in addition the qualities necessary to obtain a better price.

Area under Cultivation.—The cultivation of tobacco is very widespread in Burma. The two main varieties are called "Burmese tobacco" and "Havana tobacco." Of the Burmese tobacco there are two main varieties "Seywet-gyl," the large-leaved variety and

"Seywet-gyun," a smaller-leaved variety with pointed leaves. The former yields a heavier crop, but the latter gives better quality. There is always a great demand on the market for both the Havana and the Burma tobacco. The smooth leaves of the Havana plant are used for the wrappers and the coarser Burmese leaf for the filling.

The most important tobacco tracts in British India are:—(i) the Coimbatore and Dindigul tract of Madras, where the *Usi-Kappal* and *Wara Kappal* varieties are largely grown, the former supplying the Trichinopoly cigar; (ii) the Godavari Delta of Madras; (iii) the Rangpur tract of Bengal; (iv) the Districts of Bihar and Orissa; (v) Guzerat in Bombay and (vi) the delta tract of Burma.

The season for harvesting varies in different localities ranging from December to June, but the bulk of the crop is harvested during the months of February, March and April. The leaves when quite dry, are assorted and placed in heaps in stacks to ferment. They are then tied into bundles of 25 or 30, a useless leaf being employed for tying each bundle. The leaves are laid perfectly flat, the bundles being fan-shaped. In this condition they are baled, the broom-like ends projecting outwards. By varying the degree of fermentation of the leaves, different qualities of tobacco are obtained. A black variety is used in India for cake tobacco, and this is the most common product, but a certain amount of yellow leaf is grown for cigar making. The yield of tobacco varies in different localities ranging ordinarily from 160 lbs. to 800 lbs. per acre, the return under high cultivation being from 800 lbs. to even 3,200 lbs. per acre.

Exports.—The bulk of the Indian tobacco exported consists of leaf, the kinds chiefly shipped being the "Bispath" (cheap country tobacco) and "Poolah" varieties of the Rangoon kind. "Bispath" has no market in the United Kingdom, but is largely used by the Dutch. The total export of tobacco in 1918-19 amounted to 32,983,000 lbs. valued at Rs. 96,36,000.

Imports.—The demand for Army purposes has in recent years led to great increases in the imports of tobacco. In 1918-19 over four million lbs. of cigarettes were imported against 1,731,000 lbs. the pre-war average. Other kinds of tobacco imported amounted to 1,269,000 lbs. The total value of the imports being Rs. 2,14,61,000.

Calcutta Improvement Trust.

The Calcutta Improvement Trust was instituted by Government in January, 1912, with a view to making provision for the improvement and expansion of Calcutta by opening up congested areas, laying out or altering streets, providing open spaces for purposes of ventilation or recreation, demolishing or constructing buildings and re-housing the poorer and working classes displaced by the execution of improvement schemes.

The origin of the Calcutta Improvement Trust must, as in the case of the corresponding Bombay body, upon which the Calcutta Trust was to a large extent modelled, be looked for in a medical enquiry which was instituted into the sanitary condition of the town in 1896, owing to the outbreak of plague. It was estimated that the Trust might in the ensuing 30 years have to provide for the housing of 225,000 persons. The population of Calcutta proper, which includes all the most crowded areas, was 649,995 in 1891, and increased to 801,251, or by 25 per cent., by 1901. The corresponding figure according to the 1911 Census was 896,067.

The problem of expansion was difficult, because of the peculiar situation of Calcutta, which is shut in on one side by the Hooghly and on the other by the Salt Lakes.

Preliminary investigations continued for several years, so that it was only in 1910 that legislation was eventually introduced in the provincial legislature and the Trust instituted by it. The Bill provided for a scheme involving the expenditure of Rs. 8,22,00,000, and for special local taxation to this end. It also provided for the appointment of a whole time chairman of the board of trustees and the membership of the Trust was fixed at eleven, part of the members being nominated by Government and others elected by local bodies whose interests are most nearly concerned.

The following are the present Board of Trustees:—The Hon'ble Mr. C. H. Bompas, I.C.S., *Chairman*; the Hon'ble Mr. C. F. Payne, I.C.S., *Chairman of the Calcutta Municipal Corporation (ex-officio)*; the Hon'ble Raja Reshe Case Law, C.I.E., elected by the Corporation; the Hon'ble Rai Radha Charan Pal, Bahadur, elected by the Ward Commissioners; Mr. J. P. Wyness, elected by the Commissioners appointed under Sec. 8 (2) of the Calcutta Municipal Act, 1899; the Hon. Mr. F. W. Carter, C.I.E., C.B.E., elected by the Bengal Chamber of Commerce; the Hon'ble Rai Sitanath Rai Bahadur, elected by the Bengal National Chamber of Commerce; Sir R. N. Mookerjee, K.C.I.E., Mr. J. C. K. Peterson, C.I.E., I.C.S., and Rai Annada Prosad Sarkar, Bahadur, and Mr. W. K. Dods appointed by the Bengal Government.

The work upon which the Trust definitely embarked may be divided into three classes as follows:—

Many parts of Calcutta are overcrowded with buildings and ill-provided with roads. These areas are to be re-arranged both on the ground of sanitation and for convenience of traffic;

Population will continue to throng into the overcrowded parts unless it can live on the outskirts and at the same time have speedy access to the business centres of the town. Quick traffic can only take place along broad roads. These are almost wanting in Calcutta. The construction of broad roads will at the same time ventilate the overcrowded parts of the town and it has been recognised from the outset that the construction of broad roads running both north and south and east and west will thus secure a double object;

There is the question of providing for the population displaced by improvements, and still more important of providing for the natural growth of population by laying-out roads and building sites on sparsely populated areas on the outskirts of the town. When persons of the working class are displaced or likely to be displaced the Trust can build dwellings for them if private enterprise does not undertake the work.

In order to lay all their work upon a sure foundation the Trust charged their Chief Engineer, Mr. E. P. Richards, M.I.C.E., &c., to make a comprehensive review of the situation and recommendations and his report, a volume of 400 closely printed pages was issued in 1914. Meanwhile,* the Board had embarked upon certain improvement schemes which would not be interfered with by any larger schemes adopted later and upon a re-housing scheme with a view to provide accommodation for persons likely to be displaced by the improved schemes under preparation. The buildings designed resembled those erected by the Bombay Improvement Trust.

The steady progress of these operations inevitably provoked vehement criticism of the kind that always arises upon schemes interfering with vested property interests, but by last year a great deal of practically useful work had been accomplished in the transformation of the congested areas and insanitary slums and the planning of new streets. Of the sixteen improvement schemes submitted to Government during the preceding three years, twelve were received sanction and one remained under consideration, while three were abandoned or modified. Of these the most costly scheme is the Central Avenue, a wide thoroughfare passing north to south, the acquisition of land for which will cost two hundred lakhs gross, and fifty lakhs nett. One of the most ambitious schemes of the Trust is that for the construction of a fine thoroughfare to connect the Howrah Bridge with the centre of commercial Calcutta. The estimated nett cost of the scheme is nearly 75½ lakhs, and it will be necessary to raise funds by the issue of debentures.

The Bengal Government, in a review of the Trusts operations, last year, partly endorsed the complaints of the critics, saying that while one of the objects of the Calcutta Improvement Act was the rehousing of the poorer and working classes displaced by the execution of the improvement schemes, the action taken by the

Trust to carry out this object did not appear to have been either adequate or satisfactory in its results. It had undertaken only one rehousing scheme, which could not be said to have been a success because the tenements provided by it had not attracted the working class for whom they were intended, but were largely occupied by men of poorer bhadrakol class, students and others living without their families, who had not been displaced by the operations of the Trust.

The whole question had already been reviewed by the Trustees, and in summarising the

outlook they say, "The Improvement Trust is continually called on to weigh the rival claims of two conflicting policies: on the one hand it is urged to undertake Improvement Schemes in the north of Calcutta, so as to facilitate traffic and improve sanitary conditions and on the other hand there is the obvious necessity of developing suburban areas so as to accommodate not only the natural increase of population but also persons displaced by the execution of improvement schemes in the centre of the town. On the whole priority has been given and it can scarcely be doubted, rightly given, to the policy of suburban development."

BOMBAY IMPROVEMENT TRUST.

Bombay is an island twelve miles long, but very narrow and containing only 22 square miles altogether, but in the city, occupying little more than half the island, there lives a population enumerated at 972,892 at the Census in 1911, and actually totalling at the present time, according to conservative estimates, over a million and a quarter. Bombay is, in point of population, the second city of the British Empire. Seventy-six per cent. of its people live in one-roomed tenements. A terrible visitation of plague in 1896 harshly directed attention to the insanitary conditions arising from overcrowding and as it was recognised that the task of effecting the required improvements was too great for the Municipality, a special body, termed the Trustees for the Improvement of the City of Bombay, was appointed. It consists of 14 members, of whom four are elected by the Municipality and one each by the Chamber of Commerce, the Millowners' Association and the Port Trust, and the balance nominated by Government, or sit *ex-officio* as officers of Government. The Board is presided over by a whole-time chairman (who has hitherto always been either a covenanted civilian or an officer of the Public Works Department) and he is also head of the executive. The present chairman and members of the Trust are as follow:—

Chairman—

Mr. E. G. Turner, I.C.S., J.P.

Ex-officio Trustees—

Maj.-Gen. W. B. James, C.B., C.I.E., M.V.O.,
General Officer Commanding Bombay
District.

Mr. J. P. Brander, I.C.S., J.P., Collector
of Bombay.

Mr. H. B. Clayton, I.C.S., J.P., Municipal
Commissioner for the City of Bombay.

Elected by the Corporation—

The Hon. Sir Dinsha Edulji Wacha, Kt., J.P.
The Hon'ble Mr. Chunnilal V. Mehta, J.P.,
Mr. Cowasji Jehangir Readymoney, O.B.E.,
J.P.

The Hon. Mr. P. C. Sethna, O.B.E., J.P.

Elected by the Chamber of Commerce—
Mr. H. G. Cocks.

Elected by the Port Trustees—
Mr. G. W. Hatch, I.C.S., J.P.

Elected by the Millowners' Association—
Sir Sassoon David, Bart., J.P.

Nominated by Government—

Sir Lawless Hepper, Kt., J.P.

Mr. Mahomedbhoj Currimbhoj Ebrahim.

The Hon. Mr. Lalubhai Samaldas Mehta,
C.I.E., J.P.

The specific duties of the Trust are to construct new and widen old streets, open out crowded localities, reclaim lands from the sea to provide room for expansion, and construct sanitary dwellings for the poor.

Bombay city grew on haphazard lines, houses being added as population poured in with the growth of trade and without any regard to town planning or the sanitary requirements of a great town. The price of land was always comparatively high, owing to the small area of the island, and while the builder had only one object in view, namely, to collect as many rent paying tenants as possible on the smallest possible piece of land, there were no proper restraints to compel him to observe the most ordinary rules of hygiene. The result was the erection of great houses, sometimes five and six storeys high, constituting mere nests of rooms. There was no adequate restriction as to the height of these chawls, or the provision of surrounding open space, so that the elementary rules as to the admission of light and air went unobserved and the house builder invariably erected a building extending right up to the margins of his site. Consequently, great houses accommodating from a few hundred to as many as four thousand tenants were built with no more than two or three feet between any two of them and with hundreds of rooms having no opening at all into the outer air.

The Trust has practically reconstructed large areas on modern sanitary lines, but the old municipal by-laws having until within the past year remained quite inadequate for the due control of private building operations by the Municipality, the Trust have spent millions sterling of public money in sweeping away abuses, while unscrupulous landlords, still unchecked, added in the same old manner to the insanitary conditions of the place. It is hoped that the amendment of the by-laws, as recently settled, will overcome this evil of bad building.

Certain Government and Municipal lands were vested in the Trust, the usufruct of which it enjoys, and the Trust receives a contribution

from municipal revenues amounting to a definite share in the general tax receipts, approximating to 2 per cent. on assessments and subject to no maximum. Works were financed out of 4 per cent. loans, until the war stopped borrowing by the Trust, the loans being guaranteed by the Municipality and Government, and the revenue of the Trust being used to meet interest and sinking fund charges.

The salient features of the Trust's programme of 41 schemes as completed or sanctioned up to 1918-19 may be summarised as follows:—Capital spent on acquisition and works gradually rises from 693 lakhs at end of 1917-18 to 969 lakhs at end of 1944-45. Debt gradually rises from 568 lakhs in 1917-18 to 788 lakhs in 1924-25. Annual interest and sinking fund charges thereon gradually rise from 25.62 lakhs in 1917-18 to 35.85 in 1925-26. From 1959-60 they gradually fall as loans are paid off till they vanish in 1984-85. Permanent ground rents gradually rise from 12.84 lakhs in 1917-18 to 30.33 lakhs in 1946-47. Nett annual revenue from estates rises from 24.52 lakhs in 1917-18 to 31.33 lakhs in 1956-57. From 1998-99 onwards the nett revenue gradually falls as scheduled lands vest in Government and the Municipality till when in 2029-30 none such remains with the Trust it reaches 23.11 lakhs. Margin for expansion of programme, Rs. 122 lakhs.

Plan of operations.

The work of the Trust, as epitomised by these figures, can be divided into two parts. The first concerned the immediate alleviation of the worst burdens of insanitation and the second consisted of opening up new residential areas. The Trust began by attacking the most insanitary areas cutting broad roads through them. Meanwhile, large areas of good building land, lying idle for want of development works, were developed and brought on the market, sold at remunerative rates and largely built upon. Instances of this development are the Chaupati and Gamdevi estates, the land overhung by Malabar Hill, between it and the native city. These were cut up with fine new roads and are now nearly covered with modern suburban dwellings. Two of the most insanitary quarters in the midst of the city have been levelled to the ground and rebuilt in accordance with hygienic principles. Sanitary chawls have been built for over 20,000 persons.

The death-rate in the Trust's permanent chawls has always been considerably below the general death-rate in the vicinity. The smallest one room tenement on the Trust Estate is large enough for a family of five.

The second phase of the Trust's work, arising gradually out of the first and advancing along with its later stages, consists of the development of a new suburban areas in the north of the island, beyond the present city, and the construction of great arterial thoroughfares traversing the island from north to south.

During the past four years there has been an important movement towards the establishment of co-partnership housing societies on the Board's Estate. The Board regard the new departure as one deserving every

encouragement at their hands, especially in connection with the disposal of land in their suburbs in the north of the island and sites have been given to societies on specially favourable terms.

But in recent years the Improvement Trust have perpetually been subjected to fierce criticism, based upon the undoubted fact that its operations dishoused population more quickly than they provided new accommodation. This evil has been aggravated by the great influx of new population into the city during the past five or six years. The result has been a gross increase of overcrowding in all kinds of housing accommodation throughout the city and a violent increase in rents. Criticism of the Trust assumed such proportions and received such general support that the abolition of that body and the absorption of its duties by the Municipality was formulated into definite proposals by Government two years ago. The great difficulty of the housing problem, however, meanwhile compelled Government to pass Rent Acts for the protection of tenants and to tackle on a large scale the problem of providing further housing accommodation. It was recognized that vast housebuilding operations must be undertaken and this involved the supervision of the work by a special body. Consequently, the Trust from being moribund has suddenly obtained a new lease of life.

Enormous schemes for the expansion of housing in the city are now passing through the final stages before being put into execution. Government, the Improvement Trust and the great employers of labour will all be concerned in the work and the Improvement Trust have floated a huge new programme, their new schemes sanctioned during 1919 representing a greater undertaking than all their former schemes put together.

The new schemes of the Trust concern the northern part of Bombay Island, where large opportunities for suburban development offer themselves. At Worli on the north-west of the Island, at Dharavi on the north, and at Sewri and Wadala on the north-east, the Trust have undertaken development schemes involving the acquisition and development of 1,558 acres, or 2.43 square miles, that is, between 1/9th and 1/10th of the whole area of the Bombay Island. A considerable amount of filling of lowlying land is involved and for this purpose material from the hills on the north-east and north-west of the Island will be utilised, the hills being lowered in such a manner as to level them into desirable building sites. The outlay involved by these three schemes amounts to over Rs. 590 lakhs (£6,70,000, at 2s. 4d. exchange) and the execution of the necessary work will be proceeded as rapidly as possible and will occupy about 10 years. There will be room for more than a quarter of a million new population, equal to nearly 1/4th of the present total population of the city, in the three new estates when they are fully developed and the recoupment which the Trust will derive from the disposal of building sites upon them will repay almost the whole of the enormous capital outlay.

The Indian Ports.

The administration of the affairs of the larger ports (*Calcutta, Bombay, Madras, Karachi, Rangoon and Chittagong*) is vested by law in bodies specially constituted for the purpose. They have wide powers, but their proceedings are subject in a greater degree than those of municipal bodies to the control of Government. Except in Calcutta, the elected members are fewer in number than the nominated members. At all the ports the European members constitute the majority and the Board for Rangoon consists mainly of European members.

The income, expenditure and capital debt, according to the latest figures obtainable from the Department of Statistics (India) of the five principal ports managed by Trusts (Aden is excluded from the tables) are shown in the following table:—

—	Income.	Expenditure.	Capital Debt.
	£	£	£
Calcutta ..	1,055,945	1,041,957	7,045,785
Bombay ..	1,213,416	1,103,673	10,204,383
Karachi ..	453,838	326,050	1,725,662
Madras ..	111,618	119,436	926,403
Rangoon ..	276,354	271,681	1,990,800

In the Department of Statistics, India, the following returns have been compiled, showing the ratios borne by the income and the expenditure of each port to the total income and the

total expenditure, respectively, of all the chief Indian ports during the year 1917-18, the latest period for which the returns are obtainable:—

—	Income per cent.	Expenditure per cent.
Calcutta	33·7	36·1
Bombay	38·7	38·3
Madras	3·6	4·1
Karachi	14·5	11·3
Rangoon	8·8	9·4
Chittagong	0·7	0·8

The latest return of the Department of Statistics shows that in the ten years ending 1917-18, the income and expenditure of each port have increased as shown in the following table. The total income of all the ports has increased in the decade by 79·6 per cent. and the total expenditure by 62·2 per cent.:—

—	Increase per cent.	
	Income.	Expenditure.
Calcutta	31·8	30·5
Bombay	156·1	135·6
Madras	24·0	30·3
Karachi	159·4	53·0
Rangoon	43·6	39·1
Chittagong	80·9	97·5

The war has affected the trade of all the ports in a manner which makes it useless to continue comparisons up to date on the lines of the foregoing figures.

CALCUTTA.

The Commissioners for the Port of Calcutta are as follows:—

Appointed by Government.—The Hon'ble Mr. C. J. Stevenson Moore, C. V. O., I.C.S., Chairman, Mr. S. C. Williams, Vice-Chairman.

Elected by the Bengal Chamber of Commerce.—Mr. C. F. Beadel (Becker Gray & Co.); Mr. S. G. L. Eustace (Kilburn & Co.); Mr. L. Edwards (Andrew Yule & Co.); The Hon'ble Mr. W. E. Crum, O.B.E. (Graham & Co.); Mr. A. Cameron (Mackinnon Mackenzie & Co.); The Hon'ble Sir F. W. Carter, C.I.E., C.B.E. (Turner Morrison & Co.).

Elected by the Calcutta Trades Association.—Mr. C. F. Hooper (Thacker Spink & Co.).

Elected by the Bengal National Chamber of Commerce.—Babu Nibaran Chandra Sircar (N. C. Sircar & Sons).

Elected by the Municipal Corporation of Calcutta.—The Hon'ble Raja Reshee Case Law, C.I.E.

Nominated by Government.—Mr. A. M. Clark (Ag. Agent, Bengal Nagpur Railway); Mr. J. A. Marshall (Agent, East Indian Railway); Mr. J. Coates (Agent, E. B. Railway); Mr. A. H. Lloyd, I.C.S. (Collector of Customs); and Captain M. W. Farewell, C.I.E., R.I.M. (Captain Superintendent, Kidderpore Dockyard).

The principal officers of the Trust are—

Secretary.—Mr. T. H. Elderton.

Traffic Manager.—Mr. T. J. McCloughin.

Chief Accountant.—Mr. N. G. Park, C.A.

Chief Engineer.—Mr. J. Mc Glashan, M. INST. C.E.

Deputy Conservator.—Commander E. A. Constable, R.N.

Medical Officer.—Lt.-Col. R. P. Wilson, F.R.C.S., I.M.S.

Consulting Engineer and London Agent.—Mr. J. Angus, M. INST. C.E.

The operations of the Trust were seriously affected by the war, as owing to the position of Calcutta, there was practically no military traffic to be handled and the volume of imported goods and of coal exported shrank very largely, owing to the shortage of tonnage from unrestricted submarine attack on all vessels, firstly, by the loss of vessels actually engaged in trade with Calcutta, secondly, by the general diversion of ships to the Cape route with a consequential reduction in the number of voyages made by each, and thirdly, by the withdrawal of vessels from Eastern waters to meet the losses of tonnage incurred in Europe. A further loss of trade occurred from the restriction on the import of Burma rice into Calcutta, which the Government of India found it necessary to impose in order to relieve the heavy demands on rolling stock. The nett tonnage of exports and imports entering the port shrank from 4,256,987 tons in the last pre-war year to 2,094,011 in 1917-18. The Port Commissioner's income meanwhile increased from Rs. 1,51,28,435 to Rs. 1,58,39,175, but this was the result of the imposition of special war surcharges. The Commissioners

are under obligation to reduce or discontinue the special war charges as soon as the revival of trade renders this possible, but they did not last year feel justified in doing either, because to have done so would have resulted in a deficit of Rs 17.62 lakhs on the year's working, while, further, the improvement that took place in the Commissioners' ordinary receipts did not keep pace with the increased expenditure under all main heads, especially under establishment, stores, maintenance and repairs, owing to the rise in prices.

At the time of the outbreak of war, the Commissioners had in hand large development schemes which had been prepared as the outcome of the report of the Special Port Facilities Committee appointed by Government in December 1913 to investigate the important questions connected with the future development of the port, but the executions of these schemes, so far as they were in hand in August 1914, including the construction of a new dock to be entitled King George's Dock, has been delayed both on account of the impossibility of obtaining materials and the financial restrictions laid down by the Government of India.

BOMBAY.

The Board of Trustees of the Port of Bombay is constituted of 17 members, as follows:—

Appointed by Government.—Mr. G. W. Hatch, I.C.S. (*Chairman*), Mr. Mahomedbhoj Currimbhoy Ebrahim (Messrs. Currimbhoy Ebrahim & Co.), Sir Lawless Hepper, Kt. (Agent, G. I. P. Railway), The Hon'ble Mr. Purshotamdas Thakurdas, C.I.E., M.B.E., (Messrs. Narandas Rajaram & Co.) Major General W. C. Knight, C.B., C.S.I., D.S.O. (Military Officer serving with Bombay Brigade), The Hon'ble Mr. Phiroze C. Sethna, O.B.E. (Messrs. Phiroze C. Sethna), Mr. P. W. Monie, I.C.S. (Municipal Commissioner, Bombay), Captain N. F. J. Wilson, C.M.G., C.B.E., R.N. (Director of the Royal Indian Marine), Mr. G. S. Hardy, I.C.S., (Collector of Customs, Bombay), Mr. W. P. Pechey (Acting Agent, B. B. & C. I. Railway).

Elected by the Chamber of Commerce.—Mr. A. H. Froom (P. & O. and B. I. S. N. Co.), Sir Thomas W. Birkett Kt., (Killick Nixon & Co.), The Hon'ble Mr. Nigel F. Paton (W. & A. Graham & Co.), Mr. Malcolm N. Hogg. (Forbes, Forbes, Campbell & Co.), Mr. M. Nissim (David Sassoon & Co.)

Elected by the Indian Merchants' Chamber & Bureau.—Mr. Manu Subedar, B.A., B.S.C. (Lalji Naranji & Co.)

Elected by the Grain Merchants' Association.—Mr. Velji Lakhamesh Napu, B.A., LL.B. (Nappoo Nensi & Co.)

The following are the principal officers of the Trust:—

Secretary.—Mr. W. R. S. Shatpe.

Chief Accountant.—Mr. J. Tyers

Engineers.—Messrs. P. G. Messent, C.I.E., M. INST. C.E. (Chief Engineer). Mr. A. C. W. Fosbery, M. INST. C.E. (Deputy Chief Engineer).

Port Officer.—Captain C. S. Hickman, D.S.O., R.I.M.

Docks Manager.—Lt.-Colonel J. A. Cherry.

The revenue of the Trust in 1916-17 amounted to Rs. 1,93,21,334. The expenditure amounted to Rs. 1,82,86,217. The net surplus on the year's working was Rs. 10,35,117, which was transferred to the Revenue Reserve Fund, from which the Trustees are temporarily financing a large part of their capital expenditure. The balance of the fund at the close of the year amounted to Rs. 89,78,174. The aggregate capital expenditure during the year was Rs. 37,52,369. The total debt of the Trust at the end of the year amounted to Rs. 15,47,65,747.

The trade of the Port of Bombay during the last official year aggregated 210 crores in value.

The number of steam and square rigged vessels which entered the docks or were berthed at the harbour walls and paid dues, excluding those which remained for unloading and loading in the harbour stream during recent years, including last year, is shown by the following statement:—

Year.	Number.	Tonnage.
1906-07 1476	2,690,406
1907-08 1477	2,678,345
1908-09 1474	2,633,303
1909-10 1611	2,747,779
1910-11 1589	2,866,623
1911-12 1519	2,787,913
1912-13 1566	2,926,506
1913-14 1579	3,135,597
1914-15 1880	4,417,035
1915-16 1794	3,989,721
1916-17 2112	5,031,572
1917-18 2069	4,746,578
1918-19 2058	4,526,846

The two dry docks were in constant occupation, the total tonnage of vessels dry docked amounting to 1,323,616 tons which was less than the previous year's record by 1,30,072 tons.

KARACHI.

The members of the Board of Trustees of the Port of Karachi are as follows :—

Chairman.—Mr. J. B. S. Thubron, C.I.E., P.W.D

Appointed by Government.—Mr. W. U. Nicholas (Anderson & Co.) (on leave); Mr. E. Miller (Messrs. Ewart Ryrie & Co.) (Acting), Mr. N. D. Calder (Dy. Traffic Manager, Karachi Port North Western Railway) Major G. M. Glynton, D.S.O., (General Staff Officer, Karachi Brigade); Mr. T. J. Stephen (The National Bank of India, Ltd.); Mr. Gidumal Lekhraj (Representative Indian Merchants), Col. H. J. Mahon, C.I.E. (Embarkation Commandant). One vacant

Elected by the Chamber of Commerce.—Mr. E. A. Pearson (Forbes, Forbes Campbell & Co., Ltd.); Mr. A. O. Brown (Mackinnon Mackenzie & Co.); Mr. S. C. Woodward (Clements Robson & Co.) (on leave); Mr. H. G. Houghton (Messrs. Donald Graham & Co.) (Acting).

Elected by the Municipality.—Mr. Wadhmal Oodharam, B.A., LL.B.

The principal officers of the Trust are :—

Port Officer.—Commander G. N. Forteach, R. I. M.

Assistant Port Officer and Harbour Master.—Commander H. Tronson, R. N. R (Retd.).

Secretary & Chief Accountant.—Mr. B. A. Ingle, B.A., C.A.

Chief Engineer.—Mr. W. H. Neilson, B.A., B.A.I., M.I.C.E.

Deputy Chief Engineer.—Mr. T. H. E. Coad.

The revenue receipts and expenditure of the Port of Karachi for the year 1918-19 were as under :—

Revenue receipts (excluding the Port Fund Account, Rs. 53,76,732, Expenditure Rs. 53,67,131, Surplus Rs. 9,601. Reserve Fund Rs. 36,64,300.

The number of vessels which entered the Port, during the year 1918-19 exclusive of vessels put back and fishing boats, was 4,576 with a tonnage of 2,367,883½ against 5,504 with a tonnage of 3,074,606½ in 1917-18. 1,167 steamer of all kinds entered the Port with a tonnage of 2,162,716 against 1,439 and 2,851,535, respectively, in the previous year. Of the above, 1,093 were of British Nationality.

Imports landed at the ship wharves during the year totalled 175,242 tons against 161,115 in the previous year. Total shipments from the shipwharves were 1,862,399 tons in 1918-19 against 3,060,390 tons in 1917-18.

A lower Harbour Improvement Scheme was sanctioned by Government in 1915 but temporarily being up by the war and in accordance with this the entrance channel of the port will be deepened to a depth of 32 ft. 6 in. at L. W. O. S. T. This will enable any ship that can pass through the Suez Canal to enter the harbour and take up a berth at the lowest state of the tide. The sanctioned draught for the Suez Canal is now 29 feet, but 32 feet are being worked up to and it is understood that this will not be the extreme limit.

MADRAS.

The following gentlemen are the Trustees of the Port of Madras :—

Officials.—Sir Francis J. E. Spring, K.C.I.E. (Chairman, on leave); the Collector of Customs; Captain C. B. Henley, R.I.M. (Presidency Port Officer) and Mr. M. Brown (Superintending Engineer, V. Circle, Madras). The Hon'ble Mr. H. H. G. Mitchell, O.B.E., M.I.C.E., Acting Chief Engineer and Chairman.

Non-Officials.—(1) *Nominated by Government.*—Mr. A. A. Biggs, M. Inst. C. E., Mr. B. C. Scott, M. R. Ry., Rao Bahadur N. C. Rajagopala Achariya; Khan Bahadur Mahomed Abdul Kuddus Badsha Saheb. (2) *Representing Chamber of Commerce, Madras.*—The Hon'ble Sir Gordon Fraser; Mr. W. A. Turner; Mr. J. F.

Simpson; Mr. H. P. M. Rae. (3) *Representing Southern India Chamber of Commerce, Madras.*—M. R. Ry. C. Gopal Menon Avergal and Mr. M. A. Subban Subite Bahadur. (4) *Representing Madras Trades Association.*—Mr. S. J. Green.

The receipts of the Trust from all sources in 1918-19 were Rs. 19,71,940 against Rs. 16,74,265 in 1917-18. These are the largest annual receipts on record and it is expected that those of 1919-20 will exceed them. The gross expenditure out of revenue—not counting contributions made by revenue to capital or repayment of debt—was Rs. 20,17,941. During the year 406 vessels with an aggregate tonnage of 679,983, including 147 from foreign ports, called at the port as against 354 vessels aggregating 738,371 tons in the preceding year.

RANGOON.

The personnel of the Commissioners for the port of Rangoon is comprised of the following thirteen members :—

Appointed by Government.—Mr. J. L. Holmes, M. Inst. C.E., (Chairman and Chief Engineer), Mr. A. E. Boyd, (Chief Collector of Customs, Burma); Mr. H. C. Nangle (Commissioner of Police, Rangoon); Captain E. J. C. Hordern,

R.I.M., (Principal Port Officer, Burma), Mr. G. Scott, M.A., I.C.S., (President, Rangoon Municipality); Mr. J. R. D. Glascott; Mr. J. R. Baxter and Maung Po Yee.

Elected by the Burma Chamber of Commerce.—The Hon'ble Mr. E. J. Holberton, C.B.E., (Vice-Chairman), Messrs. J. Hogg, A. B. Ritchie and J. A. Swan.

Elected by the Rangoon Trades Association.—
Mr. J. Donald.

Officers of the Trust are—

*Secretary.—*Mr. I. Cowling.

*Resident Engineer.—*Mr. W. Lindley, *subprotem.*

*Executive Engineer (River Conservancy).—*Mr. E. C. Niven, A. M. INST. C. E. (on leave); Mr. W. Lindley, (officiating).

*Deputy Conservator.—*Mr. H. G. G. Ashton; D.S.O.

*Traffic Manager.—*Mr. E. H. Keeling, M.C., B.A.

*Chief Accountant.—*Mr. D. H. James, A.C.A.

*Port Health Department.—*Dr. F. A. Foy, M.B., C.M., D.P.H., Port Health Officer.

*Port Police Department.—*Mr. T. Austin, Superintendent.

The receipts and expenditure on revenue account of the port of Rangoon in 1918-19 were as follows:—

	Rs.
Receipts	52,27,218
Expenditure	45,30,908

The capital debt of the port at the end of the year was Rs. 2,98,62,000. Securities (at cost) of Rs. 65,48,699 are held at the credit of the sinking fund.

The total value of the trade of the port during the year was Rs. 6334.18 lakhs, as compared with Rs. 4,900.21 lakhs in the preceding year.

The total imports (landed or sent inland in river craft) from seagoing vessels amounted to 713,191 tons. Goods landed from vessels arriving from European ports and other ports outside Asia declined by 16 per cent., and from Asiatic ports on the other hand were 16 per cent. more than in 1917-18. The traffic at the jetties for inland vessels totalled 1,294,733 tons. The total number of steamers (excluding Government vessels) entering the port was 1,038 with a total net registered tonnage of 1,990,472 being an increase of 124 steamers and 245,536 tons over the previous year.

CHITTAGONG.

Chittagong, in Eastern Bengal, on the right bank of the Karnaphuli river 12 miles from its mouth, was already an important place of trade in the sixteenth century, when the Portuguese merchants gave it the name of Porto Grando. The construction of the Assam Bengal Railway has made it the natural outlet for the trade of Assam and part of Eastern Bengal. The chief business is the export of the Piecegoods, salt and kerosene oil are imported, and jute and tea are the principal exports.

The chief business is the export of tea, piece goods, salt and kerosine oil are imported, and tea and jute are the principal exports—

FOREIGN TRADE, 1918-19.		Rs.
Imports	42,29,925	
Exports	3,35,52,642	

COASTING TRADE, 1918-19.		Rs.
Imports	2,20,06,566	
Exports	1,73,87,203	

VIZAGAPATAM HARBOUR PROJECT.

The question of the creation of a harbour at Vizagapatam, to supply an outlet for a large area of fertile country hitherto undeveloped and without suitable access to the outside world, was been lately brought to the fore through a report to the Bengal-Nagpur Railway Company by their consulting engineers, Sir John Wolfe Barry, Lyster and partners. This report, which was based on personal inspection, upholds the practicability of creating, at no very extravagant cost, an inland harbour to which access would be maintained by two breakwaters projecting into the sea, and by dredging a channel to the depth (in the first instance) of 24 feet. A deep-water quay would be provided, 1,500 feet in length, with a possibility of supplying further accommodation in the future. The proposals made in this report were carefully gone into at site by representatives both of the consulting Engineer and of the Bengal Nagpur Railway and working plans have been prepared so that there might be no delay in starting work when funds became available for the purpose.

The question received sympathetic consideration on the part of the Indian Government and the Bengal-Nagpur Railway will probably be given powers to raise capital for the construction and working of the port as part of their railway system. That the creation of such a port would have a beneficial influence on the development of a large area in East Central India seems unquestioned. It is pointed out that Vizaga-

patam, lying as it does in front of the only practicable gap in the barrier of the Eastern Ghats, is formed by nature to be the outlet of the Central Provinces, from which a considerable amount of trade has taken this route in the past, even with the imperfect communications hitherto available. A necessary complement of the scheme would be the construction of the proposed railway by Parvatipuram to Raipur, which with the existing coast line of the Bengal Nagpur Railway, would make a large and rich area tributary to the proposed port, and obviate the long and expensive circuit by Calcutta. A link would also be supplied in the most direct route to Rangoon from Europe by way of Bombay, while from an imperial point of view the possible provision of a fortified port on the long and almost unprotected stretch of coast between Colombo and Calcutta is held to be a consideration of great importance. The lofty projecting headland of the Dolphin's Nose would, it is pointed out, offer facilities for this purpose as well as protecting the entrance to the Port from the effects of south and south-westerly gates.

Necessary steps are being taken by the Government of Madras to achieve this end and proposals are being made to acquire a vast extent of land for the construction of the Harbour. H. E. the Viceroy in a speech at Madras on 24th November said the Government of India hoped to make material progress with the scheme in the near future.

Famine.

Famine in India is the inevitable accompaniment of economic conditions which leave the bulk of the people dependent on the soil for their means of livelihood. It is intensified, because the produce of the soil over the greater part of India is independent on a short rainy season, and the rains are erratic and subject to violent fluctuations. It falls with exceptional severity on India because the soil is divided into a multitude of petty holdings, tilled by people without any capital, living for the most part from hand to mouth, and amongst whom credit ceases to exist as soon as the rains fall. In other agricultural countries there are good seasons and bad; but there is none other, with the possible exception of China, where in a famine year millions of acres may not yield so much as a blade of grass, except under artificial irrigation. The conclusion to be drawn from these conditions is that for many years to come India must be susceptible to famine. The shock of famine may be mitigated by the spread of railways, by the development of irrigation, the growth of manufacturing industry and the improvement of rural credit. There is evidence that all these forces are tending greatly to reduce the social and economic disturbance caused by a failure of the rains. But they cannot entirely remove it.

Famine Under Native Rule.

At one time there was a general tendency to attribute famine in India entirely to the effect of British rule. In the golden age of India, we were told—whenever it may have been—famine was unknown. But India had been drained of its resources of food by the railways, the people had been impoverished by the land revenue demand and the country as a whole had been rendered less capable of meeting a failure of rains by the "Drain" caused by the Home Charges (*q.v.*). These fallacies have disappeared under the inexorable logic of facts. A better knowledge of Indian history has shown that famines were frequent under Native rule, and frightful when they came. "In 1630" says Sir William Hunter, in the History of British India, "a calamity fell upon Gujarat which enables us to realise the terrible meaning of the word famine in India under Native rule. Whole cities and districts were left bare of inhabitants." In 1631 a Dutch merchant reported that only eleven of the 260 families at Swally survived. He found the road thence to Surat covered with bodies decaying on the highway where they died, there being none to bury them. In Surat, that great and crowded city, he could hardly see any living persons; but "the corpses at the corner of the streets lie twenty together, nobody burying them. Thirty thousand had perished in the town alone. Pestilence followed famine." Further historical evidence was adduced by Sir Theodore Morrison in his volume on the Economic Transition of India. The "Drain" theory has been exploded. It has come to be seen that whilst railways have checked the old-fashioned practice of storing grain in the villages they have made the reserves, where

they exist, available for the whole of India. In India there is now no such a thing as a food famine; the country always produces enough food for the whole of the population; famine when it comes is a money famine, and the task of the State is confined to providing the means for those affected by drought to earn enough to buy food. The machinery whereby this is done will be examined after we have seen the experiences through which it was evolved.

History of Recent Famines.

The Orissa famine of 1865-67 may be taken as the starting point because that induced to first great and organised effort to combat distress through State agency. It affected 180,000 square miles and 47,500,000 people. The Bengal Government was a little slow in appreciating the need for action, but later food was poured into the district in prodigious quantities. Thirty-five million units were relieved (a unit is one person supported for one day) at a cost 95 lakhs. The mortality was very heavy, and it is estimated that a million people, or one-third of the population, died in Orissa alone. This was followed by the Madras famine of 1866, and the famine in Western India of 1868-70. The latter famine introduced India to the great migration from Marwar which was such a distinguishing feature of the famine of 1899-1900; it is estimated that out of a total population of a million and a half in Marwar, one million emigrated. There was famine in Behar in 1873-74, then came the great South Indian Famine of 1876-78. This affected Madras, Mysore, Hyderabad and Bombay for two years and in the second year extended to parts of the Central and United Provinces and to a small tract in the Punjab. The total area affected was 257,000 square miles and the population 58,500,000. Warned by the excessive expenditure in Behar and actuated by the desire to secure economy the Government relief programme was not entirely successful. The excess mortality in this famine is said to have been 5,250,000 in British territory alone. Throughout British India 700,000,000 units were relieved at a cost of Rs. 8½ crores. Charitable contributions from Great Britain and the Colonies aggregated Rs. 84 lakhs.

The Famine Codes.

The experiences of this famine showed the necessity of placing relief on an organised basis. The first great Famine Commission which sat under the presidency of Sir Richard Starchey, elaborated the Famine Codes, which amended to meet later experience, form the basis of the famine relief system to-day. They recommended (1) that employment should be given on the relief works to the able-bodied, at a wage sufficient for support, on the condition of performing a suitable task; and (2) that gratuitous relief should be given in their villages or in poor houses to those who are unable to work. They recommended that the food supply should be left to private agency; except where that was unequal to the demands upon it. They advised that the land-owning classes should be assisted by loans, and by general suspensions of revenue in proportion to the crop failure. In sending a

Famine Code to the provincial governments, the Government of India laid down as the cardinal feature of their policy that the famine wage "is the lowest amount sufficient to maintain health under given circumstances. Whilst the duty of Government is to save life, it is not bound to maintain the labouring population at its normal level of comfort." Provincial codes were drawn up, and were tested by the famine of 1896-97. In that 307,000 square miles were affected, with a population of 69,500,000. The numbers relieved exceeded 4,000,000 at the time of greatest distress. The cost of famine relief was Rs. 7½ crores, revenue was remitted to the extent of Rs. 1¼ crore, and loans given aggregating Rs. 1¼ crore. The charitable relief fund amounted to about Rs. 1¼ crore, of which Rs. 1¼ crore was subscribed in the United Kingdom. The actual famine mortality in British India was estimated at 750,000. The experiences of this famine were examined by a Commission under Sir James Lyall, which reported that the success attained in saving life and the relief of distress was greater than had ever been recorded in famines, comparable with it in severity, and that the expense was moderate. But before the Local Governments had been given time to digest the proposals of this Commission or the people to recover from the shock, the great famine of 1899-1900 supervened.

The Famine of 1899-1900.

This famine affected 475,000 square miles with a population of 59,500,000. In the Central Provinces, Berar, Bombay, Ajmer, and the Hissar district of the Punjab famine was acute: it was intense in Rajputana, Baroda, Central India, Hyderabad and Kathiawar. It was marked by several distinctive features. The rainfall over the whole of India was in extreme defect, being eleven inches below the mean. In several localities there was practically no rain. There was in consequence a great fodder famine, with a terrible mortality amongst the cattle. The water supply was deficient, and brought a crop of difficulties in its train. Then districts like Gujarat, where famine had been unknown for so many years that the locality was thought to be famine immune, were affected; the people here being softened by prosperity, clung to their villages, in the hope of saving their cattle, and came within the scope of the relief works when it was too late to save life. A very large area in the Native States was affected, and the Marwaris swept from their impoverished land right through Central India like a horde of locusts, leaving desolation in their train. For these reasons relief had to be given on an unprecedented scale. At the end of July 4,500,000 persons were supported by the State, Rs. 10 crores were spent on relief, and the total cost was estimated at Rs. 15 crores. The famine was also marked by a widespread acceptance by Native States of the duty hitherto shouldered by the Government of India alone—the supreme responsibility of saving human life. Aided by loans to the extent of Rs. 3½ crores, the Native States did a great deal to bring their administration into line with that in British India. Although actual deaths from starvation were insignificant, the extensive outbreaks of cholera, and the devastating epidemic of

malaria which followed the advent of the rains induced a famine mortality of approximately a million. The experiences of this famine were collated by the Commission presided over by Sir Antony MacDonnell. This Commission reported that taking the famine period as a whole the relief given was excessive, and laid down certain modified lines. The cardinal feature of their policy was moral strategy. Pointing out that if the people were assisted at the start they would help themselves, whilst if their condition were allowed to deteriorate it proceeded on a declining scale, they placed in the forefront of their programme the necessity of "putting heart into the people." The machinery suggested for this purpose was the prompt and liberal distribution of tagal loans, the early suspension of revenue, and a policy of prudent boldness, starting from the preparation of a large and expansive plan of relief and secured by liberal preparations, constant vigilance, and a full enlistment of non-official help. The wage scale was revised; the minimum wage was abolished in the case of able-bodied workers; payments by results were recommended; and proposals were made for saving cattle.

Success of the new policy.

The effectiveness of this machinery was partly demonstrated during the three lean years which followed the great famine in the Bombay Presidency. But it received its most conspicuous demonstration when the rains failed in the United Provinces in 1907-08. Moral strategy was practised here on an unprecedented scale, tagal loans being granted with the greatest liberality. The effect of these measures was succinctly indicated by the Lieutenant-Governor of the United Provinces, Sir John Hewett, in a speech in summarising his administration prior to his departure in England in March 1912. He showed that in the autumn harvest of 1907 there was a shortage of 4 million tons of food grains and in the spring harvest a shortage of 3 million tons, giving a total of seven million tons, or the food supplies for the Province for nine months and an economic loss of £38 million pounds. The Government advanced £1¼ million to cultivators for temporary purposes and large sums for wells and permanent irrigation. The whole of this sum was repaid except fifty-four thousand pounds remitted owing to a second bad season and twenty-five thousand pounds then outstanding. By common consent a great famine had never been met with less loss and suffering to the people, and two years later hardly a trace of it remained. In 1911 the rainfall failed over a considerable area in Gujarat in the Bombay Presidency and again in 1912 in the Ahmednagar District of the Bombay Deccan and both these partial failures demonstrated that the shock of famine is far less severe now, owing to the increased resourcefulness of the people, than it was so late as 1899. Still further evidence in the same direction was furnished when the rains failed over large areas in the United Provinces in 1913-14. This famine affected 17,000 square miles with a population of 5½ millions, whilst distress was grave in 30,000 square miles with a population of 14 millions.

Three points soon emerged from the year—the people showed greater resisting power owing to their improved economic condition; they met the emergency with wonderful courage and resource; and the application of the relief programme brought the numbers on public works within manageable proportions, and induced the speedy return of the people to their normal avocations when the advent of bountiful rains in 1914 enabled agricultural operations to be generally resumed.

The Government of India is now in possession of complete machinery to combat the effects of drought. In ordinary times Government is kept informed of the meteorological conditions and the state of the crops; programmes of suitable relief works are kept up to date, the country is mapped into relief circles, reserves of tools and plant are stocked. If the rains fail, policy is at once declared, non-officials are enlisted, revenue suspended and loans for agricultural purposes made. Test works are then opened, and if labour in considerable quantities is attracted, they are converted into relief works on Code principles. Poor houses are opened and gratuitous relief given to the infirm. On the advent of the rains the people are moved from the large works to small works near their villages, liberal advances are made to agriculturists for the purchase of plough, cattle and seed. When the principal autumn crop is ripe, the few remaining works are gradually closed and gratuitous relief ceases. All this time the medical staff is kept in readiness to deal with cholera, which so often accompanies famine, and malaria, which generally supervenes when the rains break. Recent experiences go to show that never again will the Government of India be compelled to distribute relief on the tremendous scale demanded in 1899-1900. The high prices of produce have given the cultivators considerable resources, the extension of irrigation has protected a larger area, and labour has become more mobile, utilising to the full the increasing industrialism of the country. For instance, in 1911 the rains in Gujarat failed completely, yet there was little demand for relief works, and the necessities of the cultivators were rather for fodder for their cattle than for money or food for themselves. Various schemes are now under consideration for the establishment of fodder reserves in the villages.

Famine Protection.

Side by side with the perfection of the machinery for the relief of famine has gone the development of famine protection. The Famine Commission of 1880 stated that the best, and often the only means of securing protection from the extreme effects of famine and drought, are railways and irrigation. These are of two classes, productive and protective. Productive works being estimated to yield profits which will pay interest and sinking fund charges are met from loans; protective works, which do not pay, directly from revenue. In order to guarantee that there should be continuous progress with protective works, the Famine Insurance Grant was instituted in 1876. It was decided to set apart from the general revenues Rs. 1½ crores annually, or one million sterling. The first charge on this

grant is famine relief, the second protective works, the third the avoidance of debt. The chain of protective railways is now practically complete. Great progress is being made with protective irrigation. Acting on the advice of the Irrigation Commission (*qv*) an elaborate programme of protective irrigation works is being constructed, particularly in the Bombay Deccan—the most famine susceptible district in India—and in the Central Provinces. When these are completed, the shock of drought will be immensely reduced.

The Indian Famine Trust.

Outside the Government programme there is always scope for private philanthropy, especially in the provision of clothes, help for the superior class poor who cannot accept Government aid, and in assisting in the rehabilitation of the cultivators when the rains break. At every great famine large sums have been subscribed, particularly in the United Kingdom, for this purpose, and in 1899-1900 the people of the United States gave generous help. With the idea of providing a permanent famine fund, the Maharaja of Jaipur gave in 1900 a sum of Rs. 16 lakhs, in Government securities, to be held in trust for the relief of the needy in time of famine. This Trust has now swollen to Rs. 30 lakhs, chiefly from gifts by the founder's family. It is vested in trustees drawn from all parts of India, and is freely used in an emergency.

The Cost of Famine.

The fruits of this policy are revealed in a return on the last serious famine which has occurred in India. In the United Provinces the failure of the 1913 monsoon, followed by poor and unseasonable cold weather rains, led to a widespread failure of crops affecting an area of 18,200 square miles and a population of 6 millions, but the prosperity of the preceding years had enabled the population to develop a far greater staying power than on previous occasions of famine, nor was the rise in food prices so marked. Government made loans to cultivators amounting to over £1,250,000, besides suspending land revenue and sanctioning remissions amounting to over £717,000. The necessity for direct measures of relief did not arise till December, which is considerably later than on previous occasions of famine. The cost of direct relief operations to Government, including provision of cattle-fodder, was about £382,000, a far smaller figure than in the famine of 1907-08, although the estimated loss of food-grains was almost as great. The Public Works Department, the civil authorities, and district boards arranged for the carrying out of numerous projects with famine labour. These comprised construction of roads, tanks and irrigation works and the reclamation of ravine land—all works of undoubted utility. Gratuitous relief amounted to £80,600; it was given principally to persons incapable of working. A marked feature of the famine was the extreme scarcity of fodder, which was met chiefly by concession rates for the carriage of fodder on railways and the supply of hay from the forests. Much good work was done by non-official efforts, and a

charitable fund was raised to the amount of £27,424. The total cost of the famine to Government is estimated at £820,000, as against £2,130,000 in 1907-08. Good rains in July and September 1914 finally relieved the situation and ensured a good kharif crop. There was a widespread failure of the rains in 1918,

but it is too early to estimate the economic results. No general report on the subsequent famine conditions has been issued, but it may be affirmed that, owing to improved communications and the better economic condition of the people, the effects of the famine were less severely felt than on previous occasions.

BOY SCOUTS.

The Boy Scouts movement, initiated in England by Lt.-Gen. Sir Robert Baden Powell (the Chief Scout), has spread widely in India, and the Boy Scouts Association has received the patronage of the Viceroy and the heads of the local governments. The aim of the Association is to develop good citizenship among boys by forming their character—training them in habits of observation, obedience and self-reliance—inculcating loyalty and thoughtfulness for others—and teaching them services useful to the public and handicrafts useful to themselves.

The following division of duties of the Indian Headquarters is officially published for information:—The Hon. General Secretary deals with all matters of organisation and discipline, including the issue of Warrants to new local Associations and Officers, also the registration of new troops, which should be applied for on Form C, obtainable from the General Secretary. Recommendations for awards of Life Saving Medals and Certificates should be made to him and also all applications for exemption from the swimming test for 1st class (Regulation 21) and all correspondence on the subject of Challenge Trophies. Owing to the war the movement in India has suffered considerable dislocation and embarrassment. Fifteen new associations were formed during 1914-15 but six others are temporarily in suspension. The latest annual report gives the following details of a census of Boy Scouts

Associations in India:—Local Associations, 43. Troops, 99. Scout Masters, 90. Assistant Scout Masters, 26. Scouts, 2,161. Wolf Cubs, 180. Grand Total, 2,457.

He also deals with routine matters, official publications, sale of badges, and also all matters connected with the official publication, *The Boy Scouts Gazette of India*. Local Secretaries can communicate with him direct on these matters and it is not necessary to refer to the Commissioners on such subjects.

The *Boy Scouts Gazette of India* published monthly, is the official organ of the Movement in India and in it are notified all official notices and orders issued by the Indian Headquarters. It is obtainable from the General Secretary. Subscription Rs. 6-8-0 per annum.

HEADQUARTERS STAFF IN INDIA.

Offg. Chief Commissioner—A. D. Pickford, 2, Hare Street, Calcutta.

Assistant Chief Commissioner—W. P. Milsted, War School, Naini Tal.

Hony. General Secretary—St. George Jackson, Bar.-at-Law, 1 Clyde Road, Lucknow.

Hony. Treasurer—E. E. Savi, Alliance Bank of Simla, Calcutta.

Bankers.—The Alliance Bank of Simla, Calcutta.

The Co-operative Movement.

More than sixty per cent. of the vast population of India subsists on agriculture and the majority of these millions generally live, under present conditions, from hand to mouth. The ryot's occupation is healthy and productive, and he is proverbially honest and straightforward in his dealings, except when years of famine and hardship make him at times crafty and recalcitrant. Owing to his poverty, combined with deficiency in education and consequent lack of foresight, however, he has to incur heavy debts to meet occasional expenses for current seasonal purposes, the improvement of his land, or for ceremonial objects, and he has therefore to seek the assistance of the local money-lender, known as the Sowkar or the Mahajan. The rate of interest on such advances though varying from province to province and even in different parts of a province is generally very high. In addition to charging excessive rates the Sowkar extorts money under various pretexts and takes from the needy borrower bonds on which heavy stamp duties are payable. One of the chief causes of the ryot's poverty is, that owing to the absence of security and his short-sightedness due to want of education, he does not as a rule collect and lay by his savings, but fritters away his small earnings in extravagant and unproductive expenditure on the purchase of trinkets and ornaments and on marriage and other ceremonies. In some cases, he hoards coins under the ground with the likelihood that on his death the money is lost to his family for good. This absence of thrift and the habit of dependence, in case of difficulty, on the Government or on the Sowkar are the bane of his life. There is besides a total absence of ideals or desire for progress. A co-operative society would change all this, inasmuch as it would provide him with a suitable institution in which to lay by his savings and would teach him the valuable lesson of self-help through the sense of responsibility he would feel in being its member. Thus the chronic poverty and indebtedness of the Indian agriculturist afford a very good field for the introduction of co-operative methods, especially as his work is of a productive character likely to enable him to earn a better living under circumstances more favourable than they are at present.

Genesis of the Scheme.—The question of improving rural credit by the establishment of agricultural banks was first taken up in the early nineties when Sir W. Wedderburn, with the assistance of the late Mr. Ranade, prepared a scheme of Agricultural Banks which was approved of by Lord Ripon's Government but was not sanctioned by the Secretary of State. The matter was not again taken up until about fifteen years later when Lord Wenlock's Government in Madras deputed Mr. F. A. (now Sir Frederick) Nicholson, to report on the advisability of starting Agricultural and other Land Banks in the Presidency for the relief of the agriculturists. There was an indigenous system of banking available for the person of small means. This institution called the *Nidhi*, corresponded in some respects to the Provident Funds and Friendly Societies in European countries. Though these institutions provided

cheap capital to the agriculturists the spirit of co-operation was lacking in them. Sir Frederick, submitted an exhaustive report to Government suggesting that the formation of co-operative societies afforded an excellent means for relieving rural indebtedness. The report surveyed the growth of the co-operative movement in European countries, the conditions favourable to its development in India, if introduced, and the difficulties to be encountered in introducing it and making it a success here. Finally, it contained, for the consideration of Government, a draft Bill for the organization of Co-operative Societies. Sir Frederick pleaded for concessions to be given to the societies—such as exemption from the income-tax and remission of the stamp duty—as he felt that it would be possible to attract the people to the new movement only if Government showed its active sympathy towards it at the commencement. He ended with a fervent appeal to the non-official community “to find a Raiffeisen” who would help the ryots of this country in achieving results equal to those obtained by Raiffeisen's noble efforts in Germany. Unfortunately the report was not received favourably either by the non-official public or by the Government of Madras, and no action was taken on its suggestions.

Famine Commission of 1901.—The next few years saw two of the worst famines that India had ever suffered from, and in 1901, Lord Curzon appointed a Commission to report on the measures to be adopted in future to prevent famines and to protect the ryot from their ravages. The Commission laid stress on the proper working of the Agriculturists' Loans and the Land Improvement Loans Acts under which *takan* advances are made to cultivators. This system was given a long trial in the years previous to the great famines as well as during the ten years succeeding the 1899-1900 famines. But it is acknowledged on all hands that the system has not been successful in solving the problem of rural stagnation as it is clear that it is not facility for obtaining cheap capital alone which will raise the agriculturists and relieve him from his debts, but the provision of capital combined with the inculcation of habits of thrift and self-help. The Commission also recommended that the principal means of resisting famines was by strengthening the moral backbone of the agriculturist and it expressed its view that the introduction of co-operation in rural areas might be useful in securing this end.

Co-operative Credit Societies' Act.—These recommendations induced Lord Curzon to appoint a Committee with Sir Edward Law at its head to investigate the question and a Report was submitted to Government recommending that co-operative societies were worthy of every encouragement and of a prolonged trial. Sir Anthony (now Lord) Macdonell and others were at the same time making experiments on similar lines in the United Provinces and the Punjab with satisfactory results. All these activities, however, took an organized shape only when Lord Curzon's Government introduced in the Supreme Legislative Council a Bill to

provide for the constitution and control of Co-operative Credit Societies. The main provisions of the Bill which became the Co-operative Credit Societies' Act (Act X of 1904) were :—

(1) That any ten persons living in the same village or town or belonging to the same class or caste might be registered as a Co-operative Society for the encouragement of thrift and self-help among the members.

(2) The main business of a Society was to raise funds by deposits from members and loans from non-members, Government and other Co-operative Societies, and to distribute money thus obtained by way of loans to members or with the special permission of the Registrar, to other Co-operative Credit Societies.

(3) The organization and control of Co-operative Credit Societies in every Presidency were put under the charge of a Special Government Officer called the Registrar of Co-operative Credit Societies.

(4) The accounts of every society were to be audited by the Registrar or by a member of his staff free of charge.

(5) The liability of a member of a society was to be unlimited in the case of a Rural Society.

(6) No dividends were to be paid on the profits of a rural society, but the profits were to be carried at the end of the year to the Reserve Fund, although when this fund had grown beyond certain limits fixed under the bye-laws, a bonus might be distributed to the members.

(7) In the case of Urban Societies no dividend was payable until one-fourth of the profits in a year were carried to the Reserve Fund.

Soon after the passing of the Act the local Governments in all the Presidencies and major provinces appointed Registrars with full powers to organise, register, and control the Management of societies. In the early stages of the working of this Act, Government loans were freely given, and the response to the organising work of the Registrars was gradual and steady throughout most parts of the country.

Co-operative Societies' Act—As co-operation progressed in the country defects were noticed in the Co-operative Credit Societies' Act and these were brought to the notice of Government by the Provincial Conferences held under the auspices of Local Governments in various Presidencies, as well as by the Annual Conferences of the Registrars. In two directions the need for improved legislation was especially felt. In the first place, the success of credit societies had led to the introduction of co-operative societies for distribution and for purposes other than credit for which no legislative protection could be secured under the then existing law. And in the second place, the need for a freer supply of capital and for an improved system of supervision had led to the formation of various central agencies to finance and control the original credit societies and these central agencies ran all the risks attendant on a status unprotected by legislation. The Government of India, recognising

the need for removing these defects, decided to amend the old Act, and a Bill embodying the essential alterations proposed was introduced in the Imperial Legislative Council, and after a few amendments it emerged from the Council as the Co-operative Societies' Act (II of 1912) replacing Act X of 1904. The outstanding features of the new Act were as follows :—

(a) It authorised the formation of societies for purposes other than credit, which was possible under the old Act only with the special permission of the Local Government. This extension of Co-operation to purposes other than credit marks an important stage in its development in India.

(b) It defined in precise terms the objects for which Co-operative Societies could be organised.

(c) It removed the arbitrary division of societies into Rural and Urban and substituted the more scientific division in accordance with the form of liability adopted.

(d) It facilitated the growth of central agencies by insisting on a limited liability by means of a special clause about the registration of a society one of whose members is a registered society.

(e) It empowered the Local Government to frame rules and alter bye-laws so as to put restrictions on the dividends to be declared by societies and allowed them the discretion to sanction distribution of profits in the case of unlimited liability societies to their members.

(f) It allowed societies with the permission of the Registrar to contribute from their net profits, after the Reserve Fund was provided for amounts up to 10 per cent. of their remaining profits to any charitable purpose as defined in the Charitable Endowments' Act. This kept the movement in touch with local life by permitting societies to lend assistance to local educational and charitable institutions.

(g) It prohibited the use of the word "Co-operative" as part of the title of any business concern except a registered society.

Composition of the Capital of Agricultural Societies.—On the organization of agricultural credit was necessarily concentrated the attention of the promoters, for it presented a far more important and far more difficult problem than industrial credit. There was a great variety of types among the agricultural societies started in different provinces, and some Registrars adopted the "Schulze-Delitzsch," some the "Raiffeisen," and some the "Luzzatti" methods in their entirety. The commonest type, as in the Punjab, Burma, and the United Provinces, is the unlimited liability society with a fee for membership and a small share capital, the share payments to be made in instalments. In some cases the system insists on compulsory deposits from members before entitling them to enjoy the full privileges of membership. The system in Bombay, Bengal, and the Central Provinces is entirely different, there being no share-capital but only a membership-fee. Part of the working capital is raised by deposits from members and other local sympathisers, but the bulk of it is obtained by loans from Central and other co-operative

societies. In all the Presidencies, the Government set apart in the initial stages every year a certain sum to be advanced as loans to newly started co-operative societies, usually up to an amount equal to the deposits from members, raised by a society. State aid in the form of money doles has now become an exception rather than the rule, and this withdrawal in no way hampers the development of the movement on account of the rapid increase of Co-operative financing agencies and the growth of public confidence in the primary societies. For agricultural societies generally, the main sources of capital are shares, deposits of members, deposits from non-members and loans from central Societies.

Constitution of Agricultural Societies.—The typical Agricultural Society in India corresponds to the "Raiffeisen" society, the management being gratuitous, the profits indivisible, and the area of work limited. In the Punjab, the United Provinces and Burma where shares form an integral part of the system, the distribution of a portion of the profits after ten years working is permitted under certain restrictions. Usually, the secretary gets a monthly pay of Re. 1 to Rs. 5 with a bonus at the end of the year equal to a fourth of annual profits. In parts of the country there are villages where a few literate men may be found but most of these are hardly fit enough to undertake the responsible work of a secretary, being practically ignorant of account keeping. In such villages either the village school-master or the village accountant is appointed secretary. In some places, where a suitable person is not available on this low pay neighbouring societies are grouped together with a whole-time, well-paid secretary. This arrangement, which has its advantages, involves the drawback that the outsider working as secretary does not naturally feel as much interest about the society's working as a *bona-fide* member does and is less amenable to the control of the members. As the work of societies develops, the need for trained secretaries is being felt more keenly for it is now realized that the function of a secretary does not consist merely in writing the accounts correctly. With a view to meet the demand for trained secretaries, a training class has been organized in Bombay for the last few years and the work has been placed on a systematic basis by the new educational and propagandist Institute. Junior classes are held in areas which are developed co-operatively and the senior classes are held in Bombay. More than two hundred men will under the new arrangements obtain training every year. Lectures are delivered at the class on the details of the work of co-operative societies and on the main principles of co-operation. This interesting experiment deserves to be copied in other parts of the country. Instruction for secretaries on similar lines is being organized now in most provinces particularly in Bihar and Orissa, in the United Provinces and Bengal.

Internal Management of Societies.—The managing committee of a society consists of 5 to 9 members of the society, the chairman being usually the leading person in the village. The daily work of the society is carried on by the secretary, but the managing committee

supervises the work and has alone the power to admit new members, to receive deposits, arrange for outside loans, grant loans to members and take notice of defaulters. The accounts of the society are kept by the secretary and the necessary forms, papers, and books are usually supplied from the Registrar's office to simplify the work of the secretary. The books are kept according to the rules framed by the Local Governments and are open to inspection by important local officials and the Registrar and his staff. The accounts are audited, at least once a year, by the auditors working under the Registrars of Co-operative Societies and the Societies are inspected from time to time by honorary or paid inspectors. The loans are mostly given on the security of two co-members. Under the Act, Societies are allowed under certain conditions to advance loans on the hypothecation of moveable or immovable property and there is nothing unco-operative in this so long as personal security which is the central principle of co-operation is given and the borrower's property is recognized as only a secondary or collateral protection. Mortgages are taken occasionally, especially in the case of long term loans and loans for the liquidation of old debts.

The supreme seat of authority in co-operative societies is the general body of members assembled in general meetings. At the annual general meeting held at the close of the co-operative year, the accounts are submitted, the balance-sheet passed, and the managing committees with the chairmen and secretaries are elected. The general meeting fixes in some provinces the borrowing limit of individual members, lays down the maximum amount up to which the Managing Committee may borrow during the ensuing year, dismisses members for misconduct or serious default, and settles the rates of interest for loans and deposits. As these meetings are informal, other local topics of public utility are sometimes discussed. All the net profits of the society are annually carried to the Reserve Fund, which is indivisible, that is, incapable of distribution as dividend or bonus, which cannot be drawn upon without the sanction of the Registrar, and which must be invested in such a manner as the Registrar prescribes. It is intended to meet unforeseen losses and to serve as an asset or security in borrowings. Except in the Central Provinces and Madras, the Reserve Funds of primary societies are generally utilised as an addition to their working capital, though steps are being taken in some parts of the country to stop this practice and to insist on the Reserve being kept entirely apart from the working capital and invested in Government securities or placed as floating deposits in reliable Central Banks. The Government of India state in their Resolution of 17th June 1914 "that while there may be advantages in the earlier stages in using the Reserve as part of the working capital of the society, it should gradually, as it becomes more important, be set apart for separate investments." The Eighth Conference of Registrars held in 1918 has also accepted this view. The general trend of opinion seems to be that primary societies should be free to utilize their reserve funds as part of the working capital

except when they have considerable outside deposits and have not made special arrangements in respect of fluid resource to cover such borrowings.

Main defects.—The main defects of primary societies may be summarized. The most prominent is the evil of unpunctuality. This is due more to easy going ways of life and the narrowness of margin between income and expenditure rather than to recalcitrancy. Next is the infrequent apathy of the members in the work of the societies owing to lack of education and absence of higher ideals. The general body leaves affairs at the mercy of the committee and the committee transfers its powers to the chairman, secretary or some other member. Then there is the objectionable practice of making book adjustments and taking *benami* loans. A grave defect is the inability of the societies to act as real banks, receiving money when presented and granting loans on demand according to actual requirements. In many a society, activity is displayed only twice in the year, once during the cultivation season when loans are advanced and again after harvest time when recoveries are collected.

Non-agricultural societies.—Non-agricultural societies, have grown up in towns and cities for improving the economic and moral condition of persons engaged in handicrafts and cottage industries, of artisans and small traders, members of particular castes and employees and of big firms and Government departments. Non-agricultural societies, except those for handicraftsmen, artisans, and persons of the poorer classes, referred to later, have usually a limited liability. This is due partly to the absence of any assets in real property among their members, but mainly to the field of their work not being compact as in the case of agricultural societies, where every member may be expected to know every other member. Their constitution is based on the 'Schulze Delitzsche' model and in most cases the management is honorary, though sometimes, when the sphere of society's work is extended, a paid staff is employed. There is in all societies a substantial share capital, payments being made in instalments, and the rest of the working capital is obtained by local deposits from members and others. Loans from co-operative and Joint Stock Banks usually form only a meagre portion of the capital. Of the total working capital of roughly Rs. 1,47,00,000 Rs. 30,00,000 represent loans and deposits from non-members, Rs. 1,41,000 loans and deposits from other societies, Rs. 12,01,000 loans from Provincial or Central Bank, Rs. 41,00,000 deposits from members, Rs. 51,00,000 share capital, Rs. 9,21,000 reserve fund and Rs. 57,000 State aid. At the end of every year one-fourth of the net profits must be carried to the reserve fund and the balance may be distributed as dividend or bonus. There are a few serious drawbacks in the working of these societies and complaints about them are noticeable in many of the Registrars' annual reports. The most serious of these complaints are that the spirit of co-operation is lacking in many non-agricultural societies, that there is too great a desire to go in for profits and dividends and a growing tendency to make the societies close preserves once they have started running on profitable

lines. The rates of interest on loans are at times higher than they ought to be, and the men at the head of the societies are loth to admit new members who are in need of loans for fear of the latter cutting down the profits.

Included in this group are communal societies, and societies of employees of firms, railway companies, and Government offices. There are again, a few societies organized on the lines of the village Popular Banks of Europe to assist small non-agricultural traders and artisans in towns and there are also some societies comprising members of particular communities. Some of the larger non-agricultural societies, after meeting the needs of their members, have large balances on hand, which they are allowed, with the previous sanction of the Registrar, to advance to smaller primary societies.

With the growth of industrialism and the development of cities an important labouring class has grown up in big industrial towns and this class is as deeply indebted and as badly remunerated as the agriculturists. Co-operation, if introduced among people of this class, would open a new life to them besides being the means of their economic regeneration. No systematic efforts have hitherto been made in this direction, as urban co-operation has so far been confined more or less to middle class people. The first experiment was initiated in Bombay under the auspices of an organization known as the Debt Redemption Committee. Some work in this direction has also been done in Madras, particularly among the depressed classes. The Social Service League of Bombay has also lately started several promising societies among factory workers. Those Societies, if successful, may become the forerunners of a healthy Trade Unionism in India.

Loans advanced.—The total amount of loans advanced to members by agricultural and non-agricultural societies during the year 1916-17 were Rs. 2,27,92,656 and Rs. 1,11,32,262, respectively, as against the total of less than Rs. 25 lakhs issued by both these classes of societies in the year 1906-7. As the movement progresses, it is being more and more realised that the early clearance of a member from previous debts after his admission to a society is very desirable and greater attention is being bestowed by the Registrars on this question. It is impossible to insist on the restriction of loans to productive objects and there are circumstances under which unproductive loans are permissible and even advisable. What should be and generally is borne in mind is that precautions are taken by societies that the expenditure is inevitable and that it is not excessive in amount. The chief objects of the loans advanced are cultivation expenses, purchase of live-stock, fodder, seed, manure and agricultural implements, payment of rent, revenue or irrigation dues, land improvement and sinking of wells, purchase of new lands, and personal maintenance in times of scarcity in agricultural societies, and for purchase of raw materials for industries, for trade, for house-building and for food and other necessities of life in non-agricultural societies. The terms of the loans are one year

or less on those for current needs, whether for agriculture or petty trade, and up to five years or so on loans for liquidation of old debts or for land improvement. An unsatisfactory feature of the co-operative system in some of the Provinces is the laxity and unpunctuality in the matter of repayment of loans by members and a general apathy in the matter on the part of societies. As co-operation is both financially and educationally a failure unless promptitude of payment is ensured, no efforts are spared by organizers to educate societies in this respect. The Co-operative Societies' Act grants to societies priority of claim against other creditors (except the State or the landlord) to enforce any outstanding demand due to the societies from members or past members upon the crops or other agricultural produce, and upon the cattle, fodder or agricultural implements, in cases where loans have been advanced for the purposes specified. But not content with this, some co-operators have pleaded for special powers of recovery of loans under which overdue loans may be recovered as arrears of land revenue. Most local Governments have framed rules under the Act enabling the Registrar to refer disputed claims to arbitration and to enforce the award of the Registrar in the same manner as a decree of the Civil Court. It is not likely that Government will sanction a special process under which claims against defaulting members may be recovered according to procedure allowed for the recovery of arrears of land revenue. For the existence of a special privilege of this character cannot but lead to laxity in the selection of members and carelessness in the granting of loans and in securing regular repayments on them. Demand for a special procedure for the recovery of the dues of a cancelled society stands on a somewhat different footing and the Local Governments of Bengal, and Bihar and Orissa have already passed enactments enabling the contribution levied by the liquidator of a cancelled society to be collected in the same manner as arrears of land revenue on an application being made in that behalf by the Registrar of Co-operative Societies. Legislation on similar lines is contemplated in Bombay, the Central Provinces and the United provinces.

The Financing of Agricultural Societies.—As soon as the initial stage of the movement had passed, a very urgent problem had to be faced. This was to finance the agricultural societies that were growing in all directions. And the problem was solved in different provinces according to the special conditions and the stages of development the movement had attained therein. In Madras a Central Bank, which lent to Co-operative Societies in the Presidency, was started without Government aid as early as in 1917. This was followed by the starting of banks at district head-quarters. In other Presidencies, district and taluka banks were established making good the deficiency in the local capital of the societies within their districts, and in some places Joint Stock Banks were persuaded to make advances direct to agricultural societies or through the medium of local Central Banks. A large number of prosperous non-agricultural societies, as stated above, could afford to lend to agricul-

tural societies. Government aid was also freely given. With the progress of the movement, however, this aid was discontinued. In Bombay there was no movement to start local financing agencies and the very slow progress of the movement made it difficult for central banks with a restricted area of operations to work successfully. Accordingly the Bombay Central Co-operative Bank was founded in 1911, with a share capital of Rs. 7 lakhs and with power to issue debentures at 4 per cent. up to three times the amount of the paid-up share capital, the Government guaranteeing payment of interest on the debentures till their repayment. The Bank was authorised to lend only to registered co-operative societies all over the Presidency with the previous sanction of the Registrar in the case of every individual loan. As an indirect result of the establishment of the Bombay Central Bank, a number of district banks have since been started in the Presidency.

The drawback of the Bombay and the Madras Central Banks is that neither is a co-operative Apex Bank in the true sense of the term. In the Bombay Central Bank, co-operative societies are now encouraged to become members and may be expected gradually to assist in shaping its general policy. The Madras Central Bank has been recently converted their Bank into a Provincial Bank on sound co-operative lines. A Provincial Bank with four Central Banks affiliated to it is in existence in Upper Burma, and this Bank finances primary societies either through the affiliated local banks or through the guaranteeing of unions composed of societies. An Apex Bank has been started in the Central Provinces to form an immediate link between the district banks in the Province and the Commercial Banks in Allahabad and elsewhere. It has worked well and its success led to the establishment of a Provincial Bank with a similar constitution in Bihar and Orissa. A scheme has also been set afoot for having a Provincial Apex Bank in Bengal, where, as also in Bihar and Orissa, the primary societies are at present financed by Central Banks at district or taluka head-quarters. A Provincial Federation of Central Banks has for the present been started transferring to itself the deposit liabilities of local banks, and distributing these according to requirements. The Federation also acts as the balancing centre for the province and provides fluid resource to affiliated banks. In the United Provinces primary societies are financed on the same system, and there, too, the starting of a Provincial Apex Bank under which Central Banks will be federated is under contemplation. The Punjab has a local central banking system and though sooner or later it, too, will have an Apex Bank, no definite proposal for the establishment of such Bank has yet matured. A provincial union has, however, been recently started which will work as a financial federation for the local banks in the province and facilitate mutual aid between them till an Apex Bank comes into being.

The constitution of Central Banks is not uniform, but the existing Banks may be classified under three general heads:—(1) Banks of which the membership is confined to in-

dividuals or where societies are admitted as members on exactly the same footing as individuals, (2) Banks of which the membership is confined to societies, and (3) Banks which include societies and individuals as their members and secure to societies separate representation on the Board of Directors.

Functions of Central Banks:—The functions of Central Banks are to balance the funds of Societies and to supply capital. But their duties are not limited to the provision of banking facilities only, but often include the organisation and supervision of societies. Hence where the Central Banks are not formed on a capitalistic basis, they perform the functions of supervision and control of the Societies affiliated to them, and in some Provinces they also organise new Societies and even take up the entire educational work now done by the Registrar. Usually the Central Banks is only possible for the whole of a district, as the personnel necessary for its successful working would be difficult to secure in a smaller area. However, in different parts of the country we notice the existence of Central Societies for *talukas* and occasionally for smaller tracts. An important class of institutions included under the statistics of central societies are unions which may be described as federations of societies which are maintained for supervision, either combined or not with the assessment or guarantee of loans to primary societies, and which do not undertake banking business. These unions have a very restricted area of operations, within a radius of five to eight miles from a central village. They are accepted as integral parts of the provincial organization in Burma and the Central Provinces, in one case serving as a link between primary societies and the provincial bank and in the other between primary societies and local banks. The system has also been extended to Bombay and Madras, though in the last named province no guarantee is undertaken by those bodies.

Organization and Propaganda:—It may be mentioned that in most of the provinces the work of organising and looking after the societies is done by the Registrar with the help of assistants and a few honorary non-official workers. Where the Central Bank system has properly developed, the Directors of the Central Bank either themselves or through a paid agency organise societies and, as stated above, supervise their working. The number of honorary workers is steadily increasing and in some Presidencies there is a staff of specially-appointed honorary organisers who regularly assist the Registrars. The activities of the honorary workers are often, however, spasmodic and unorganized, and in most of the major provinces the need has been felt for some co-operative institution which will co-ordinate and systematize the efforts of non-official workers, and place them on a responsible basis. This might take the shape of organisation societies or federations on the lines of similar institutions in Germany, England and Ireland. Such institutions carry on active educational propaganda and through the agency of local committees and groups of workers, assist in the organization of new societies and attend to their supervision. Arrangements can also be possible for the carrying on the audit of

societies—for which Government cannot continue to increase the official staff to an unlimited extent—on payment of some fixed contributions. Finally such federations should have the final voice in the determination of policy, and subject to the statutory powers of the Registrar gradually take over the control of the co-operative organization in a province. In the Central Provinces there has been for some years a federation of Co-operative Banks which promises to develop into a truly co-operative organising and controlling agency. The federation provides a regular and efficient system of supervision, audit and control, arranges for the training of the federation staff, attempts to secure uniformity of practice among co-operative institutions and to promote their interest and fosters the spread of co-operation by active propaganda. A Provincial Union has also been started in Madras, but its objects are mainly educational and propagandist. Its activities are at present confined to the issuing of co-operative journals and the holding of conferences. A Central Institute to focus the efforts of co-operative workers and to carry on propagandist work has lately been established in Bombay. The objects of this institution are to develop the movement in the Presidency, by promoting the study of co-operation and by co-ordinating the activities of several existing propagandist and organization agencies. The institute has no powers of control, though it is expected to ascertain and represent the views of co-operators on questions affecting the movement. Organization will be undertaken primarily in the City of Bombay. The activities of the Institution carried on through various sub-committees, and some of these have already done much useful educational propagandist work. In Bengal a similar propagandist organization has been started with identical aims. The Society has undertaken much of the educational and propagandist work hitherto performed by the Co-operative Department, and has assisted in the organization of co-operative stores among students in colleges. It has opened branch centres and projected a comprehensive scheme for the training of members of village societies and their Secretaries. A federation with a constitution more or less similar to that of the Central Provinces Federation has been lately registered in Bihar and Orissa, while in the Punjab a provincial union was organized during the year for conducting the audit of primary societies and undertaking general propagandist work. In Burma the audit of primary societies is conducted by a central committee consisting of important Departmental officials and representatives of co-operative institutions. Organization, supervision and propaganda are furthered by district federations of unions of primary societies. These are all recent developments and it is still too early to forecast on what lines the transfer of control to representative co-operative agencies will be carried out.

Other forms of Co-operation.—After the passing of the amended Co-operative Societies' Act the application of co-operation to purposes other than credit was greatly extended, but it is only during the last few years that a general demand for productive and distributive, pur-

chase and sale co-operative societies has exhibited itself. At the end of the year 1918-19, there were very few store societies in the country. In all provinces, particularly in Madras, some beginning had been made in the direction of distributive co-operation among the middle classes, while in Bengal and the United Provinces some attention had been devoted to the starting of stores for students living in hostels attached to Colleges. The movement, has however, now begun to obtain popular favour in view of the increasing prices of the daily necessities of life, and the profiteering which assumed serious proportions at the close of the War. Co-operators in the provinces of Madras, Bombay, and the Punjab have attempted earnestly to tackle the evil by organizing supply unions, stores, societies, and distributive departments attached to credit societies, and in all the three provinces some steps are contemplated for obtaining cheap, wholesale supplies for the various distributive organizations. In some Provinces efforts have been made to revive the ancient handicrafts of the country and cottage industries by organising co-operative societies for the workers. Many of these societies merely provide cheap credit, but in some places they undertake the supply of raw material and the sale of manufactured goods. An important industry which flourished in India before the introduction of machinery was handloom weaving and efforts have been made to revive it by the formation of productive co-operative societies of handloom weavers. Most of the weavers' societies are not merely credit societies, but undertake the purchase of good yarn for members, and in some cases have store branches to sell the cloth produced by them. They have also been instrumental, prominently in Bombay, the United Provinces, and the Central Provinces, in introducing improved looms and methods amongst the conservative weaving classes. Other industrial societies to be found in very small numbers here and there are those for "gaoles" or milkmen, dyers, basket and brass workers in the Central Provinces, "Chammars" and "Dhers" in Bombay and Punjab, lacquerware workers, carpenters, wood carvers, blacksmith and potters. The Indian Industrial Commission in the course of their inquiries devoted some attention to the development of small and cottage industries and the possibility of reviving them by the introduction of co-operation. Their recommendations on this subject are not very definite. State loans for purchase of costly plant or machinery are, however, recommended, and emphasis is laid on the necessity of arranging facilities for the marketing of products of home industries. The first step to industrial co-operation is to be taken by familiarizing workers with the principles of co-operative credit, though later on separate non-credit institutions would become necessary. Suggestions are made for technical guidance to workers, and the local departments of industries are advised to keep workers constantly informed about the demands of the markets. Organization of industrial societies is to be a function of local departments of industries, but as that will be engaged with problems of big industries, it is doubtful of the cottage and small industries will have

much scope for development under the new regime.

Nearly ten Housing Societies have been started in Bombay. They are organized on the co-partnership system, under which the Society owns the houses and lets them to members at fixed rents. The scheme is feasible for such section of the middle classes as can provide a certain proportion of the initial capital. There are some Building Societies* in Madras and a few more in Mysore and in the former, the movement seems to have gained a firm footing.

The province of Burma is a pioneer in the matter of cattle insurance, and to support the village insurance societies which have been started in the province, there has been organized a central re-insurance society, which receives some financial backing from Government. In other provinces co-operative insurance for cattle has made little or no progress.

Agricultural Co-operation.—Agricultura societies have until recently been engaged only in supplying cheap credit to their members, but there are various other fields of work to which they may extend their activities. Grain Banks may be started with advantage, receiving deposits in kind and allowing these to accumulate to be sold at profitable rates or distributed to the members in times of scarcity. Such banks have been started in Bombay, Madras, and Bengal. Societies on a similar principle for the storage of fodder may assist in solving what is likely to become in the near future an important problem in rural economy. Another direction in which the co-operative principle is being adopted is the starting of societies for purchase of and distribution among members of good unadulterated seed. A number of small seed societies have been organized in the Bombay Presidency and in the Central Provinces and Berar, the work appears to have been particularly well organized. Societies for the co-operative purchase and sale of manure will also prove a great boon, and a few such stores have been established in Madras, Bengal and Bombay.

Co-operative Societies for the joint sale of produce are becoming popular as co-operative credit thrives and agriculturists become less dependent on local traders. While Burma led the way by starting societies for the joint sale of paddy, the most interesting developments in the direction have taken place in Bombay. Societies for the sale of agricultural commodities, chiefly cotton and jaggery have been started in several districts in the Deccan and the Karnatak. This aspect of co-operation has lately attracted considerable attention and attempts similar to those made in Bombay are contemplated in Madras and the Punjab. It will indeed be a great achievement if these efforts are successful and the cultivator obtains adequate returns for his produce. At present he buys in the dearest market and sells in the cheapest. But if co-operative purchase and sale show good progress, his economic position will be much improved. In addition credit societies and central banks, in many parts of the country again, arrange for the joint sale of produce. In some

places credit societies undertake the joint purchase of agricultural implements for members, while in others separate registered societies are started for the purpose. Where the system of Central Banks has developed this work is taken over by these Banks for the Societies affiliated to the Banks.

Efforts have been made in some parts of the country to solve the problem of milk-supply—to reduce the price and increase the purity—by starting co-operative dairies, composed either totally of gaois or milkmen or the producers and the consumers together. Co-operative creameries and ghee producing societies have also been started in one or two provinces. Another interesting development is the starting of cattle-breeding societies in the Central Provinces and elsewhere. It is anticipated that these societies will assist in supplying the keen demand that exists for bulls of good stock. In several provinces there are Societies for rice-hulling, the manufacture of jaggery and for lift irrigation. Ginning on co-operative lines has also been attempted.

Government has of late made attempts to bring the co-operative movement in close touch with the Agricultural Department. Co-operation has already been successful to a considerable extent in redeeming the chronic indebtedness of the agriculturist, but if the improvement in his economic condition is to be permanent it is essential that he should be prevailed upon to adopt improved methods of production. The Agricultural Department does undertake propagandist work with this object, but its efforts have not proved as successful as they ought to be. A co-operative society provides just the effective agency to reach the agriculturists, and in many places societies have been the means of bringing home to the agriculturist the need for improved methods and have been made the centres for the propagandist activities of the Agricultural Department and District Agricultural Associations. As a result, a few societies have been enterprising enough to purchase modern agricultural implements, and the machinery recommended by the Department and to use the proper manures and the certified varieties of seeds. "Wherever agriculture and co-operation have experienced the assistance which each can derive from association with the other they are fast developing a truly organic connection." If the reorganisation of Indian agriculture grows apace with the spread of co-operation, there is no doubt that rural India will soon present a happier outlook than it does now.

Committee on Co-operation in India.—In July 1914, the Government of India issued a lengthy Resolution on co-operation in India, surveying its progress in the country during the last ten years. It particularly emphasised the urgency of a proper financial organisation of societies and stated that "the responsibilities introduced by the addition to the co-operative organization of the central and provincial banks are of a serious character. To supervise the relations of such institutions with the money market on the one hand, and with their con-

stituent societies on the other, is a task which requires a considerable degree of technical skill, and the administration of the whole co-operative movement in the stages above that of the individual society is a matter which must in the immediate future engage the serious attention of Government and of the people." In October, the Imperial Government appointed a Committee under Sir Edward Maclagan to examine whether the movement especially in its higher stages and in its financial aspect was progressing on sound lines and to suggest any measures of improvement which seemed to be required. The enquiry was to be directed primarily to an examination of such matters as the constitution and working of Central and Provincial Banks, the financial connection between the various parts of the co-operative organization, the audit, inspection, and management of all classes of societies, and the utilization of the reserve funds. The scope of the enquiry was, however, in no way rigidly limited by the Government of India. In its report, which was issued in September 1915, the Committee stated that it had not confined its enquiries to the subjects referred to it, for it had to recognise that the financial welfare of the higher stages of the co-operative system was largely based on the soundness of the foundation.

Government Action on Committee's Report.—The minor recommendations made have already been given effect to, but the opinions of the Local Governments were invited on the important ones. These opinions were published by the Government of India in September 1917. The Government of India has not passed orders on the recommendations in the light of the opinions of the Local Governments. The views of the Local Government differ very widely and clearly showed that a uniform system cannot be introduced in provinces with diverse conditions. The prescribed standard of fluid resources is condemned by some provinces, others object to the use of the Reserve Funds by societies in their own business, and a majority disapprove of the proposed appointment of an expert co-operator with the Government of India, while practically all approve of a summary process of recovery for the dues of members of societies in liquidation. Several provinces have already decided to take action on such of the recommendations as are approved of by the Registrars and are suitable to local conditions, and the co-operative organization in most provinces has been modified more or less on the lines suggested. With a view further to elicit opinion on the recommendations, a special conference of the Registrars was convened in August 1918, to which all the Registrars and a few selected non-official co-operators were invited. The Conference passed several important resolutions, adopting the Committee's suggestions about the utilization of reserve funds and the acceptance of savings deposits by primary societies and disapproving generally of the recommendation about the standard of fluid resource to be maintained by central institutions. The Conference also had under consideration the suggestion made by the Committee on co-operation that as the financing of the move-

ment involved grave difficulties which baffled solution unless the discounting of pro-notes arranged through an Imperial State Bank or the several Presidency Banks, a careful examination of the question was immediately called for. A proposal was made for the appointment of an expert Committee, but the Government of India have practically shelved it by insisting that they would assemble the Committee, at some date convenient to them. Although, as mentioned above, several of the Local Governments have given effect to some of the recommendations of the Committee no orders of general application have yet been issued by the Government of India except with regard to a few of the minor points.

Effect of Crisis on Co-operation.—It is hardly possible to appreciate the effect of the co-operative movement in enabling the agriculturists to resist the rigours of a famine as also to judge the reaction of the latter on the co-operative organisation. For, after the introduction of the co-operative movement in India, the country has not been affected by any widespread famines like those through which the greater portion of the country passed in 1898-1900. The agricultural season of 1918-19, however, put the co-operative organisation in most provinces to a very severe test and the reports for the next few years should afford some indication of the resisting power of the co-operative organization. There has occasionally been scarcity verging on famine in Bombay, Bengal, and the Punjab and the United Provinces but in neither of the two provinces was the distress sufficiently crushing or widespread to render the assistance provided by the societies inadequate for the needs of members. In Bengal and the Punjab, the return of favourable seasons has averted any break down of the system, but the same cannot be asserted of the United Provinces, where there appears to be some danger of the strain not being quite successfully withstood. With a better appreciation of the dependence of the agriculturist on seasons, and a more systematic management of the funds of central societies it is anticipated that in future the situation arising out of a failure of rains will be satisfactorily met. In 1913 and the following months practically the whole of the country was subjected to a banking crisis of considerable magnitude, but a marked feature of this crisis was a tendency to withdraw deposits from non-co-operative institutions and place them in co-operative banks. The outbreak of the War brought another set of influences into play and there was a temporary tendency to withdraw deposits and a temporary cessation of new deposits. The disturbance was not serious except in two or three provinces and by the end of the year 1914-15, the situation became practically normal. In two of the provinces where the situation caused some anxiety owing to the cessation of fresh deposits in Central Banks, the Government sanctioned advances to the extent of Rs. 5,00,000 to Central Societies to be utilized in case of urgent loans to agricultural societies or to meet withdrawals of deposits. On the whole, therefore, the movement appears to have stood the test of the War much better than might have

been expected. While, therefore, the co-operative movement as a whole has been the cause of little or no anxiety to the public as well as to the State, Co-operative institutions in several provinces have borne their share of the burden of the War to the best of their ability. Large subscriptions to the War Loan and relief funds were made in Bengal, Bombay, the Central Provinces, the Punjab and the United Provinces.

Social Reform.—Co-operation has, in some places, stimulated the desire for education and members of rural societies have been known even at advanced ages to receive the elements of education to enable them to put their signatures on the society's papers, and to take a lively interest in the internal work of their societies. There are a few cases where a society has set its face against drunkenness, expelled members notorious for their intemperate habits and has in other ways worked for a better morality by insisting on a high standard of life. Societies have occasionally condemned excessive and even heavy expenditure on marriages, and have thus indirectly trained members to the habit of thrift. Liquidation of old debts again has been rendered possible to a great extent and many an agriculturist who was formerly in a state of chronic indebtedness has been relieved of all his debts and freed from the necessity of incurring new ones. Credit has been much cheapened and it is now possible for the agriculturist to borrow at 9 to 18 per cent. what he could not borrow at less than 20 to 75 per cent. formerly. It has been calculated that in interest alone the agriculturists of India, by taking loans from Co-operative Credit Societies instead of from the village money-lenders, are even now saving themselves from an unnecessary burden of at least 20 lakhs of rupees. The village rates of interest have naturally gone down considerably and the Sowkar is, in most places, not the terror and the force that he was. Business habits have been inculcated with the beneficial result that the agriculturist has learnt to conduct his own work more efficiently. Thrift has been encouraged and the value of savings better appreciated. Participation in the management of societies has brought home to the members the important lessons of self-help and self-reliance; but the most important achievement of co-operation has been the instilling of a sense of communal life—a feeling of "all for each and each for all" amongst the members of a co-operative body. If these signs become as common as they are now rare, and if, over and above the economic benefits achieved by it, co-operation succeeds in its true aim—the building up of the character of the people and the promotion of their welfare by the inculcation of the ideas of thrift and the principles of self-help, and, above all, by showing the wisdom of mutual help and brotherliness amongst neighbours—a resuscitation of rural life such as is conducive to more quickened national progress will not be far off.

The following statements show the progress of the Co-operative movement in different provinces, and contain some information about their detailed working:—

Currency Commission's Report.

The general features of the Indian Currency system are described in the earlier pages of the Year Book (pp. 196-199), where the general effects of the war are dealt with and mention is made of the appointment of a Currency Committee to examine and report on the best methods to secure a working monetary system and a stable standard rate of exchange. The report of this committee was made known in India on February 2nd, 1920, and is summarised in the following passage:—

We now proceed to summarise the main conclusions at which we have arrived:

(i) It is desirable to restore stability to the rupee and to re-establish the automatic working of the Indian currency system. (Para. 36).

(ii) The reduction of the fineness or weight of the rupee (para. 38), the issue of 2 or 3 rupee coins of lower proportional silver content than the present rupee (para. 39), or the issue of a nickel rupee (para. 40), are expedients that cannot be recommended.

If the legal tender limit of one rupee for the 8 anna nickel coin should prove an obstacle to its free circulation the question of raising the limit of Rs. 5 or Rs. 10 should be considered. (Para. 40).

(iii) The maintenance of the convertibility of the note issue is essential, and proposals that do not adequately protect the Indian paper currency from the risk of becoming inconvertible cannot be entertained. (Para. 41.)

(iv) The rise in exchange, in so far as it has checked and mitigated the rise in Indian prices, has been to the advantage of the country as a whole, and it is desirable to secure the continuance of this benefit. (Para. 50.)

(v) Indian trade is not likely to suffer any permanent injury from the fixing of exchange at a high level.

If, contrary to expectation, a great and rapid fall in the world prices were to take place, and if the costs of production in India fail to adjust themselves with equal rapidity to the lower level of prices, then it might be necessary to consider the problem afresh. (Para. 51.)

(vi) The development of Indian industry would not be seriously hampered by a high rate of exchange. (Para. 52.)

(vii) The gain to India of a high rate of exchange for meeting the Home charges is an incidental advantage that must be taken into consideration. (Para. 53.)

(viii) To postpone fixing a stable rate of exchange would be open to serious criticism and entail prolongation of Government control. (Para. 58.)

(ix) The balance of advantage is decidedly on the side of fixing the exchange value of the rupee in terms of gold rather than in terms of sterling. (Para. 56-7.)

(x) The stable relation to be established between the rupee and gold should be at the rate of Rs. 10 to one sovereign or, in other words, at the rate of one rupee for 11·30016 grains of fine gold, both for foreign exchange and for internal circulation. (Para. 59.)

(xi) If silver rises for more than a brief period above the parity of 2s. (gold) the situation should be met by all other available means rather than by impairing the convertibility of the note issue. Such measures might be (a) reduction of sale of Council bills; (b) abstention from purchase of silver; (c) use of gold to meet demands for metallic currency. If it should be absolutely necessary to purchase silver, the Government should be prepared to purchase even at a price such that rupees would be coined at a loss. (Para. 59.)

(xii) Council Drafts are primarily sold not for the convenience of trade but to provide for the Home charges in the widest sense of the term. There is no obligation to sell drafts to meet all trade demands; but, if without inconvenience or with advantage the Secretary of State is in a position to sell drafts in excess of his immediate needs when a trade demand for them exists, there is no objection to his doing so, subject to due regard being paid to the principles governing the location of the reserves.

Council Drafts should be sold as now by open tender at competitive rates, a minimum rate being fixed from time to time on the basis of the sterling cost of shipping gold to India. At present this rate will vary; but when sterling is again equivalent to gold, it will remain uniform. (Para. 61.)

(xiii) The Government of India should be authorised to announce, without previous reference to the Secretary of State on each occasion, their readiness to sell weekly a stated amount of Reverse Councils (including telegraphic transfers) during periods of exchange weakness at a price based on the cost of shipping gold from India to the United Kingdom. (Para. 62.)

(xiv) The quantity of gold taken by India for all purposes in the period before the war was not disproportionately large having regard to her social customs and economic position; but more productive methods for employing wealth should be encouraged. (Para. 63-4.)

(xv) The import and export of gold to and from India should be free from Government control. (Para. 65.)

(xvi) The import and export of gold to aim at giving the people the form of currency which they demand, whether rupees, notes, or gold; but gold can be employed to the best advantage in the Government reserves where it is available for meeting the demand for foreign remittance.

It would not be to India's advantage actively to encourage the increased use of gold in the internal circulation, but it may for some time be difficult to meet all demands for metallic currency in rupees, and a more extensive use of gold may

be necessary. In order that confidence may not be disturbed by exceptional issues, the issue of gold coin in moderate quantities should be one of the normal methods of meeting demands for currency. (Para. 66.)

(xvii) The Bombay branch of the Royal Mint should be re-opened for the coinage of sovereigns and half sovereigns and facilities should be afforded to the public for the coinage of gold bullion and for the refining of gold. (Para. 67.)

(xviii) The obligation of the Government to give rupees for sovereigns should be withdrawn. (Para. 68.)

(xix) Opportunities should be afforded to the public to exchange sovereigns in their possession at the rate of 15 rupees per sovereign at the time of the introduction of the new ratio. Similar opportunities should be given to holders of the gold mohur which should eventually be demobilised. (Para. 69.)

(xx) The prohibition on the import of silver should be removed as soon as is convenient. (Para. 70.)

(xxi) When the prohibition on the import of silver is removed, the import duty should also be removed, unless the fiscal position demands its retention. (Para. 71.)

(xxii) The prohibition on the export of silver should be retained for the present with a view to the protection of the silver currency from depletion by export.

If the silver mined in India should cease to be purchased by the Government, its export should be permitted under licence. (Para. 72.)

(xxiii) Improved banking facilities and increased opportunities for the investment of savings should be afforded. (Para. 73.)

(xxiv) No recommendation is made for modifying the present practice regulating the purchase of silver for coinage. (Para. 74.)

(xxv) The statutory minimum for the metallic portion of the Paper Currency Reserve should be 40 per cent. of the gross circulation.

Minority Report.—The report was signed by all the members with the exception of Mr. Dadiha Merwanji Dalal, who maintained that there should be no unnecessary disturbance of the monetary standard in India. He therefore made the following recommendations :

(a) The money standard in India should remain unaltered; that is, the standard of the sovereign and gold mohurs with rupees related thereto at the ratio of 15 to 1.

(b) Free and unfettered imports and exports by the public of gold bullion and gold coins.

(c) Free and unfettered imports by the public of silver bullion and silver coins.

(d) The gold mint at Bombay to be continued to receive gold bullion from the public and to coin free of charge gold mohurs of the same exact weight and fineness as the sovereign and to hand them over to the tenderers of gold bullion in less than 15 days.

(e) The Bombay mint to undertake refining of raw gold for the public and not to make any profit on the transaction.

(f) The existing silver rupees of 165 grains of fine silver at present in circulation to continue full legal tender.

(g) As long as the price of silver in New York is over 92 cents, Government should not manufacture silver rupees containing 165 grains fine silver.

(h) As long as the price of silver is over 92 cents Government should coin 2 rupee coins of reduced fineness compared with that of the present silver rupee and the same to be unlimited legal tender.

(i) Government to coin a new 8-anna silver piece of reduced fineness and the same to be unlimited legal tender.

(j) Government not to coin an 8-anna nickel piece.

(k) Government to sell Council bills by competitive tenders for the amount defined in the Budget as required to be remitted to the Secretary of State. The Budget estimate to show under separate headings the amount of Council bills drawn for Home Charges, for Capital Outlay and Discharge of Debt. Council bills to be sold for Government requirements only and not for trade purposes, except for the purpose mentioned in the next succeeding recommendation.

(l) "Reverse" drafts on London to be sold only at 1s. 3 29-32d. The proceeds of "Reverse" drafts to be kept apart from all other Government funds and not to be utilised for any purpose except to meet drafts drawn by the Secretary of State at a rate below 1s. 4 3-32d. per rupee.

(m) Currency notes should be printed in India.

(n) Government not to interfere with the immemorial practice of the Indian public of melting currency coins.

(o) The sterling investments held against the Indian note issue to be liquidated as early as possible and transmitted to India in gold.

(p) The use of one rupee currency notes to be discontinued as early as possible and meanwhile not to be forced into circulation.

Official Action.—Simultaneously with the publication of the Report the following announcement was made by the Secretary of State as to the action which he proposed to take thereon :—

"The Secretary of State for India has considered in consultation with the Government of India the majority and minority reports received from the Committee appointed by him under the Chairmanship of Sir Henry Babington Smith to advise on the subject of Indian exchange and currency. The majority report, which is signed by the Chairman and all members of Committee except Mr. D. M. Dalal, states as its object the restoration of a stable and automatic system and the maintenance of the convertibility of the note issue.

2. The fundamental recommendations of the report are follows:—

(a) that the present rupee, unchanged in weight and fineness, should remain unlimited legal tender;

(b) that the rupee should have a fixed exchanged value and that this exchange value should be expressed in terms of gold at the rate of one rupee for 11.30016 grains of fine gold, that is, one-tenth of the gold contents of the sovereign;

(c) that the sovereign which is now rated by law at rupees 15 should be made legal tender in India at the revised ratio of rupees ten to one sovereign;

(d) that the import and export of gold to and from India should be free from Government control as soon as the change in the statutory ratio has been effected, and that the gold mint at Bombay should be open for the coinage into sovereigns of gold tendered by public;

(e) that the notification of Government undertaking to give rupees for sovereigns should be withdrawn;

(f) that the prohibition on the private import and export of silver should be removed in due course and that the import duty on silver should be repealed unless the fiscal position demands its retention.

3. These recommendations develop with the necessary modifications required by altered circumstances the principles on which the Indian currency system was established before the war, and are accepted by the Secretary of State in Council as expressing the goal towards which Indian administration, following the previous policy, should now be directed.

4. Under the conditions existing prior to the war sterling and gold were identical standards. The existing disparity has made a choice between these standards necessary, and the committee's recommendation is in favour of placing the rupee on a gold basis.

5. In recommending a rate, namely that above mentioned, for the exchange value of the rupee the Chairman and majority have taken account of the high range of silver prices and of the importance of safeguarding the convertibility of the Indian note issue by providing so far as possible that the token character of the rupee shall be restored and maintained, *i.e.*, that the Indian Government may be in a position to buy silver for coinage into rupees without loss. They were also impressed by the serious economic and political risks attendant on a further expansion of Indian prices such as must be anticipated from the adoption of a low rate.

6. The arguments advanced in favour of a gold basis and of a high rate of exchange appear to the Secretary of State in Council to be conclusive, and he has decided to take the necessary steps to give immediate effect to the recommendations on these points. Accordingly, the Government of India have to-day announced that the rate which they will pay for gold tendered to them under the Gold Import Act by private importers will henceforth be fixed at one rupee for 11.30016 grains of fine gold,

i.e., Rs. 10 for the gold contents of the sovereign. The consequential changes in the regulations relating to the sale of Council drafts by the Secretary of State in Council and of reverse drafts by the Government of India will be notified separately.

7. The question of the internal ratio presents special difficulties. The Committee recommend the maintenance of gold on a legal tender footing especially in view of possible difficulties in obtaining adequate supplies of silver. A fixed ratio must, therefore, be established between the rupee and gold, as used in the internal circulation, either one sovereign for Rs. 15 as at present or one sovereign for Rs. 10 in correspondence with new exchange ratio. The former alternative would give the sovereign the status of an over-valued token coin, necessitating permanent control over the import of sovereigns and making an open gold mint impossible. The Secretary of State in Council agrees with the Committee that such conditions ought not to be contemplated as a permanent arrangement. On the other hand, the lower ratio cannot be effectively introduced while a great disparity continues to exist between the commercial price of gold in India and the intended Indian mint par of one sovereign for Rs. 10.

8. Present conditions are a product of the war and in some sense artificial. They cannot be immediately remedied without the risk of shock to the economic and monetary system in India, and of reaction elsewhere to which India cannot in her own interests be indifferent: a gradual process of rectification and of adjustment to new conditions is required. For some time past action has been taken in India to reduce the premium on gold by regular Government sales of bullion to the public, and this measure will be further developed. It may be expected that in that way a natural adjustment may be effected until the path to legislation is cleared.

9. The Secretary of State has decided, therefore, first, that the import of gold shall continue for the present to be controlled by license under the Gold Import Act, with a fixed acquisition rate as mentioned above; second, that meanwhile, periodical sales of gold bullion to the public shall continue; and third, that as a provisional measure during the transition period sovereigns shall remain legal tender at the present ratio of Rs. 15

10. In arriving at these decisions the Secretary of State in Council has not failed to give careful consideration to the minority report signed by Mr. D. M. Dalal. Mr. Dalal's main object is the effective restoration and maintenance of the ratio of 15 rupees to a sovereign as a measure both of exchange and of the circulating value of the rupee. In order to secure this he relies upon freedom for the melting and export of rupees and correspondingly to freedom for the import of gold. To meet the possible result in shortage of silver coins he recommends that as long as the New York price of silver remains above 92 cents Government should coin two rupee silver coins of reduced fineness, the coinage of rupees of the present weight and fineness being meanwhile suspended, and only resumed when the price

of silver falls to the figure named. He also recommends that sterling drafts on the Secretary of State should be sold only at 1s. 3 29-32d.

11. The Secretary of State in Council is satisfied that this programme could not be adopted without untoward consequences. The heavy exports of silver coin to be anticipated under the scheme must threaten not only the whole silver circulation but also the Government reserves of silver coin, and entail the gravest risk of inconvertibility of the Government note issue. The demand for the gold required continually to make this deficiency good must greatly aggravate any strain there may be on the gold stock of world when the freedom of import is restored. Nor is it safe to assume that these difficulties could be met by issuing new silver coins of inferior fineness; the evidence against the acceptability of an inferior substitute for the present rupee has impressed the majority, and their recommendation on this head is accepted by the Secretary of State as decisive. Mr. Dalal's recommendation in regard to the rate for sterling drafts, if adopted,

must produce an immediate crash in exchange bringing unmerited disaster to those who have reasonably relied on some continuity of policy. The only cover which his scheme affords is the export of the country's circulating currency. In any case, even if a return to the pre-war level of exchange could be accomplished without a shock to trade or risk to the Currency system, it would lay India open to a further serious inflation of prices, while the majority's recommendation would tend towards a reduction of general price levels in India.

12. Both during and since the war Indian currency and exchange have presented problems previously unanticipated and more perplexing than any encountered since the decision to close the mints in 1893. But the Secretary of State in Council is satisfied that decisions reached promise an eventual solution, and he desires to express his acknowledgments to the Committee and their Chairman for the ability and thoroughness with which they have explored the issues and have framed their recommendations."

OILS AND OIL CAKES.

In 1917-18 exports of oil-seeds amounted to 457,700 tons, a decrease of 51 per cent. as compared with the previous year and of 63 per cent. with the pre-war average. The value of these exports amounted to Rs. 8,22 lakhs of which Rs. 18 lakhs represents an advance on the previous year's prices.

A pamphlet on the subject recently published by the Commercial Intelligence Department points out that it is both economically and industrially unsound for India to export her oil seeds instead of manufacturing the oils and oil cakes in India. It allows other countries to reap the manufacturers' profits and at the same time deprives Indian agriculture of the great potential wealth, as cattle-food and manure, contained in the oil cakes. An immense quantity of oil is, as a matter of fact, already manufactured in this country by more or less crude processes. Village oil mills worked by bullocks and presses worked by hand exist in all parts of the country and supply most of the local demand for oil. There has also been a great increase in recent years in the number of oil mills worked by steam or other mechanical power. These crush all the commoner oil seeds and development has been especially marked in the case of mustard oil, castor oil and groundnut oil. In spite of all this there has been a perceptible diminution in the export of oil from India, particularly of cocoanut oil and linseed oil, and an increase in the export of oil seeds, which is particularly marked in the case of copra and groundnuts. The situation created by the War has naturally led to much discussion of the possibility of developing on a large scale the existing oil-milling industry in India.

There are three difficulties with which any proposal to develop in India an oil-milling

industry on a great scale is faced. In the first place, there exist high protective tariffs in European countries which encourage the export from India of the raw material rather than the manufactured product. Secondly, there is a better market for the oil cake in Europe than in India and the freight on oil seeds is less than the freight on cake. Thirdly, it is much easier and less expensive to transport oil seeds by sea than it is to transport oil. While this has been the position in the European markets, Indian made oils, other than cocoanut oil, have made enough headway in Eastern markets to suggest the possibility of a development of those markets.

The problem of finding a market for oil cakes is equally important. The value of oil cakes is much better appreciated in Europe than in India. The Indian cultivator is prejudiced against the use of machine-made cake as a cattle food or as manure because he considers that it contains less oil and therefore less nourishment than the village-made cake. He is therefore unwilling to buy it except at a reduced price. His prejudices on this point have no justification in fact since experts are agreed that mill cake is a better food for cattle than village-made cake. Even when the mill cake contains less oil than the village cake, there is still more oil in the cake than cattle can digest. The excess of oil in the village cake, where it exists, is a drawback and not an advantage to the use of the cake as food. A considerable amount of demonstration work has been done by the Agricultural Departments of Government in order to remove the cultivator's prejudices and there is said now to be an increasing demand for most classes of mill cake.

The Women's Medical Service for India.

This Service is included in the National Association for supplying female medical aid to the Women of India, generally known as the Countess of Dufferin's Fund and is administered by the Central Committee of that Fund. The Government of India has so far allotted the sum of £10,000 per annum towards its maintenance. The present sanctioned cadre is twenty-five first class medical women, but it is hoped that this number will shortly be augmented. Recruitment of the service is made (a) in India by a medical sub-committee of the Central Committee which includes the Director-General, Indian Medical Service, the Honorary Secretary to the Central Committee, and a first-class medical woman; (b) in England, by a sub-committee, consisting of a medical man and two medical women conversant with conditions in India, to be nominated by the Home Committee of the Countess of Dufferin's Fund. These sub-committees perform the duties of a medical board examining candidates or physical fitness, and for return to duty after invaliding.

The Central Committee determines what proportions of the members of the Service is to be recruited in England and in India respectively. In the original constitution of the Service, duly qualified medical women who are in the service of, or who have rendered approved service to, the Countess of Dufferin's Fund, are to have the first claim to appointment, and thereafter special consideration is to be paid to the claims of candidates who have qualified in local institutions and of those who are natives of India.

Qualifications.—The qualifications are that the candidate must be (a) a British Subject resident in the United Kingdom or in a British Colony or in British India, or a person resident in any territory of any Native Prince or Chief under the suzerainty of His Majesty exercised through the Governor-General of India or through any Governor or other officer subordinate to the Governor-General of India. (b) Must be between the ages of twenty-four and thirty at entry. (c) She must be a first-class Medical Woman, *i.e.*, she must possess a medical qualification registerable in the United Kingdom under the Medical Act, or an Indian or Colonial qualification registerable in the United Kingdom under that Act: but this condition does not apply at the original constitution of the Service to medical women in charge of hospitals who, in the opinion of the Central Committee, are of proved experience and ability. (d) The candidate must produce a certificate of health and character. But the Central Committee reserves the power to promote to the service ladies not possessing the above qualifications, but who have shown marked capacity. Members of the Service are required to engage for duty anywhere in India or Burma. Those recruited in England serve for six months, and those recruited in India for three months, in a General Hospital of the Province to which they are deputed. After this period of probation has been satisfactorily passed their appointments are confirmed. The services of Members

may be lent to Local or Municipal bodies, or to special institutions, which may be responsible for whole or part of the pay.

Pay.—The rates of pay are as follows:—During probation Rs. 350 per month: thereafter Rs. 400 up to the end of the 4th year; Rs. 450 from the 5th to the 7th year; Rs. 500 from the 8th to the 10th year; and Rs. 550 after the 10th year. But no member can be confirmed in the 400 rupee grade unless she has passed an examination in such vernacular as the Provincial Committee shall prescribe, within one year of her appointment. In addition suitable quarters are provided free of rent: or a house rent allowance to be determined by the Provincial Committee may be granted in lieu of it.

Members of the Service are permitted to engage in private practice provided it does not interfere with their official duties, and the Provincial Committee has the power to determine whether such duties are thus interfered with. Except in very special cases retirement is compulsory at the age of forty-eight. A member whose appointment is not confirmed, or who is dismissed, is granted an allowance sufficient to pay her passage to England.

Leave Rules.—(a) Casual Leave, which is occasional leave on full pay for a few days, and is not supposed to interrupt duty. (b) Privilege Leave, which is leave on full pay and is meant to provide a month's holiday in the year. If it cannot be granted during the year, it can be accumulated up to a limit of three months. (c) Furlough, at the rate of two months for each year of duty, the latter including privilege leave and casual leave. First furlough is not granted till after four years of duty, and more than eight months furlough is not granted at one time. Study leave may also be granted not exceeding three months at a time and up to twelve months during the whole service. (d) Sick leave, up to a maximum of two years. (e) Extraordinary leave at any time at the discretion of the Central Committee. When on furlough or sick leave the allowances are half the average monthly pay of the six months presence on duty immediately preceding the taking of the leave. There are no allowances during extraordinary leave. A Lady appointed in England receives a sum of £70 to cover her passage and incidental expenses. There are also allowances to cover the cost of journeys by rail and road.

There is also to be a Provident Fund, each member contributing monthly thereto five per cent. of her salary, the Association contributing an equal amount, and each subscriber's account being granted interest on the amount standing to credit at the rate of 4 per cent. per annum, "or at such rate as the Central Committee can invest without risk to the funds of the Association."

The Member loses her contributions if she resigns (except on account of ill-health) before completing five years' service, or in the event of dismissal. On retirement after approved service the sum which has accumulated to the credit of the subscriber is handed over to her.

The Lady Hardinge Medical College was opened by His Excellency Lord Hardinge on February 17th, 1916. This College was established in commemoration of the visit of their Imperial Majesties to Delhi in 1911, with the object of providing a complete medical education for women of India. The initial cost was defrayed by subscriptions collected by the late Lady Hardinge mainly from Indian Princes and Chiefs. After her death in 1914, it was decided to complete the institution as a memorial to Lady Hardinge.

The College and Hospital buildings together with hostels for medical students and nurses, and residences for the medical and teaching staff, are grouped in a large compound, situated in the Imperial enclave in close proximity to the city of Delhi. The College buildings consist of three blocks containing Library, Museum, Lecture Rooms, Offices and Laboratories. Separate hostels with kitchens and dining rooms are provided for Hindu, Muhammadan, Sikh, Parsee, Indian Christian and European students. The total cost of the completed buildings and equipment will be about 25 lacs. The College is supported by a grant from Government. It is designed to accommodate 100 students and to provide a full medical curriculum as required by the General Medical Council of Great Britain. At present it is affiliated in the Faculty of Medicine of the Uni-

versity of the Punjab up to the First Professional Examination. The staff are all women.

Principal and Professor of Medicine, Miss K. A. Platt, M.D. (LOND.), Women's Medical Service, India; Professor of Surgery, Miss H. M. Franklin, M.B.B.S. (LOND.); Vice Principal and Professor of Gynaecology and Midwifery, Miss C. L. Houlton, M.D., B.S., (LOND.) Cert. Trop. Medicine (LOND.), Women's Medical Service, India; Professor of Pathology, Miss M. B. Stogdon, L.R.C.P., M.R.C.S.; Professor of Anatomy, Miss M. C. Murphy, M.B. (CAL.), L.R.C.P. (LOND.) M.R.C.S., (ENG.), Women's Medical Service India; Professor of Physiology, Miss M. R. N. Holmer, M.A. (DUBLIN) Nat. Sc. Tripos Class 1 (Cantab.) Diploma (Distinction, Oxon.); Professor of Chemistry, Miss A. M. Bain, M.A. B. SC., (Aberdeen), Special Distinction in Chemistry; Professor of Botany and Zoology, Miss Hett; Professor of Mathematics and Physics, Miss P. M. Borthwick, B. SC., (LOND.) M. SC. (Bristol); Warden and Secretary, Miss M. W. Jesson, Maths. Tripos (Cantab.).

The Lady Hardinge Training School for Nurses.—Attached to the Hospital which is designed to hold 168 beds is a training school for nurses and midwives. It is intended to train Indian girls as nurses, who will be available for nursing in private families as well as in hospitals. Nursing Superintendent, Miss L. E. Mackenzie.

THE COUNTESS OF DUFFERIN'S FUND.

The National Association for supplying female medical aid to the women of India at once one of the most efficient as it is among the most useful and benevolent institutions in India, is the outcome of the work of the Countess of Dufferin and Ava during the time of her husband's Viceroyalty. The late Queen Victoria drew the attention of the Countess, on the departure of the latter for India, to the question of supplying medical aid to women in this country, and asked her to take a practical interest in the subject. As the result of her enquiries she found that, though certain great efforts were being made in a few places to provide female attendance in hospitals, training schools, and dispensaries for women, and although missionary effort had done much, and had indeed for many years been sending out pioneers into the field, yet taking India as a whole, its women, owing to the "purdah" system, were undoubtedly without that medical aid which European women were accustomed to consider as absolutely necessary. In the Countess' own words written in 1886 after the movement had been started: "I found that even in cases where nature, if left to herself, would be the best doctor, the ignorant practice of the so-called midwife led to infinite mischief, which might often be characterised as abominably cruel. It seemed to me, then, that if only the people of India could be made to realise that their women have to bear more than their necessary share of human suffering, and that it rests with the men of this country and with the women of other nationalities to relieve them of that unnecessary burden, then surely the men would put their shoulders to the wheel and would determine that wives,

mothers and sisters, and daughters dependent upon them should, in times of sickness and pain, have every relief that human skill and tender nursing could afford them.....I thought that if an association could be formed which should set before itself this one single object, to bring medical knowledge and medical relief to the women of India, and which should carefully avoid compromising the simplicity of its aim by keeping clear of all controversial subjects and by working in a strictly unsectarian spirit, then it might become national, and ought to command the support and sympathy of every one in the country who has women dependent upon him."

Initiation of the Scheme.—Lady Dufferin's plans were warmly received by the public all over India. The scheme was drawn out and published in the different dialects. The association was named "The National Association for Supplying Female Medical Aid to the Women of India," and the money for its support, as it was received, was credited to the "Countess of Dufferin's Fund." The affairs of the Association were managed by a central committee of which the Countess of Dufferin during her stay in India was President. Branch Associations, each independent for financial and administrative purposes, but linked with the central committee, were formed in most parts of the country, and the work may be said to have started from August 1885. The objects of the Association are thus set-forth in its publications.—I. Medical tuition, including the teaching and training in India of women as doctors, hospital assistants, nurses, and midwives. II. Medical relief, including the estab-

lishing under female superintendence, of dispensaries and hospitals for the treatment of women and children; the opening of female wards under women superintendents in the existing hospitals and dispensaries; the provision of female medical officers and attendants for existing female wards; and the founding of hospitals for women where special funds or endowments are forthcoming.

III. The supply of trained female nurses and midwives for women, and nurses for children in hospitals and private houses.

Within four years from its inception there were in existence twelve hospitals for women and fifteen dispensaries, most of which were officered by women, and all more or less closely connected with the Association. From the subscriptions collected there was enough to set aside a substantial sum as an endowment fund; and also six medical, twelve nursing and two hospital assistant scholarships had been provided for.

Growth of Scheme.—The first regular training school in India for the instruction of native pupils in medical and surgical nursing, and in midwifery was established in 1886 by the Bombay Branch of the Association in connection with the Cama Hospital in Bombay. This is a civil institution under Government management, and is solely for women and children of all castes and denominations. In

connection therewith is the Allbless Obstetrical Hospital and the Jaffer Suleiman Dispensary for women and children. The present physician-in-charge is Miss A. Turner Watts, M.D. (Lond).

There are thirteen Provincial Branches working under the central committee; and attached in some manner, or affiliated to the provincial branches, there are about one hundred and forty Local and District Associations or Committees engaged in furthering the work of the Association. There are one hundred and fifty-eight hospitals, wards, or dispensaries of various kinds for the medical relief of close on one and a quarter million women and children; and the value of the institutions engaged in the work of the Association was estimated at over 56 lakhs of rupees.

Annual Report.—The Report of the Association is published annually, and can be obtained either from the Superintendent of Government Printing, Calcutta, or from the leading booksellers, the price being one rupee. The map of India published therewith shows the women's Hospitals officered by women in India. The Honorary Secretary is Lieut.-Col. Austen Smith, C.I.E., I.M.S., and the Joint Secretary, Dr. M. I. Balfour, M.B., Women's Medical Service. The Headquarters of the Central Committee are Viceregal Lodge, Delhi and Simla.

NURSING.

Whilst India cannot show the complete chain of efficiently-nursed hospitals which exists in England, there has been a great development of skilled nursing of recent years. This activity is principally centred in the Bengal, Madras, and Bombay Presidencies, where the chief hospitals in the Presidency towns are well nursed, and where large private staffs are maintained, available to the general public on payment of a prescribed scale of fees. These hospitals also act as training institutions, and turn out a yearly supply of fully trained nurses, both to meet their own demands and those of outside institutions and private agencies. In this way the supply of trained nurses, English, Anglo-Indian and Indian, is being steadily increased. In Bombay the organisation has gone a step farther, through the establishment of the Bombay Presidency Nursing Association, c/o St. George's Hospital, Bombay. This is composed of representatives of the various Nursing Associations in charge of individual hospitals, and works under the Government. The principle on which the relations of this Association with the Local Associations is governed is that there shall be central examination and control combined with complete individual autonomy in administration.

Nursing Bodies.—The Honorary Secretary of the Calcutta Nursing Association is Mr. R. A. B. Reynolds, the Presidency General Hospital. The address of the Mayo Hospital Nursing Association is in Strand Road. In Madras there is the General Hospital, with a staff of 62 nurses, the Government Maternity Hospital, the Caste and Gosha Hospital at Killpauk, the Royappeta Hospital and the Ophthalmic Hospital.

Bombay Presidency.—The Bombay Presidency was amongst the first in India to realise the value of nursing in connection with hospital work. The first steps were taken on the initiative of Mr. L. R. W. Forrest at St. George's Hospital, Bombay, where a regular nursing cadre for the hospital was established together with a small staff of nurses for private cases. This was followed by a similar movement at the J. J. and Allied Hospitals and afterwards spread to other hospitals in the Presidency. Ultimately, the Government laid down a definite principle with regard to the financial aid which they would give to such institutions, agreeing to contribute a sum equal to that raised from private sources. Afterwards, as the work grew, it was decided by Government that each nursing association attached to a hospital should have a definite constitution, and consequently these bodies have all been registered as Associations under Act 21 of 1860. By degrees substantial endowments have been built up, although the Associations are still largely dependent upon annual subscriptions towards the maintenance of their work. The chief of these Associations are:—

St. George's Hospital Nursing Association.
Secretary: D. W. Wilson, St. George's Hospital, Bombay.

J. J. Hospital Nursing Association.
Secretary: A. G. Gray, Jamsetji Jijibhai Hospital, Bombay.

Gokaldas Tejpal Hospital Nursing Association.
Secretary: Rahimtullah Currimbhoy.

Cama Hospital Nursing Association. Hon.
Secretary: H. Macnaghten, Esq.
Address—Cama Hospital, Bombay.

Sassoon Hospital Nursing Association.
Address—Sassoon Hospital, Poona.

Ahmedabad and Lely Memorial Association.
Address—Civil Surgeon, Ahmedabad.

After further experience it was felt that it is undesirable to have a considerable number of detached and independent nursing associations, training and certifying nurses, without any common standard of entrance examination, or certification. It was therefore decided to establish the Bombay Presidency Nursing Association which came into existence in the year 1910. This is an Association formed partly of representatives of all affiliated associations and partly of direct representatives of Government, the Surgeon-General with the Government of Bombay always being the chairman. It is financed partly from the product of endowments and partly from contributions from the Government of India. If subsequently further funds are needed they are to be provided by contributions from the affiliated Associations.

The principle on which the Bombay Presidency Nursing Association works is a central system of examination, certification, registration and control. It is now the only nursing, examining, registering and certifying body in the Bombay Presidency. At the same time, the local associations retain entire charge of their local funds excepting Provident funds which have been transferred to the Central fund, and also entire control of the nurses when they are in their employment. In a sentence, the principle is central examination and certification and local control. By degrees it is hoped to be able to establish the principle that none but nurses registered under or certified by this association shall be employed in any Government institution.

The Association commenced its operations on the 1st April 1911. The institutions recognized under the by-laws for the training of nurses at present are—St. George's Hospital, J. J. Hospital, Cama and Allbless Hospitals in Bombay, the Civil Hospital, Karachi, the H. and P. Civil Hospital, Ahmedabad, and the Sassoon Hospital in Poona, and the following for the training of midwives;—The Cama and Allbless Hospitals, St. George's Hospital and the Bai Motlibai Hospital in Bombay, and the Sassoon Hospital in Poona.

Provision for retiring allowances is made for all members on the basis of a Provident Fund and a Nursing Reserve has been established for employment in emergencies such as war, pestilence or public danger or calamity.

Address—The Secretary, Bombay Presidency Nursing Association, St. George's Hospital, Bombay.

Lady Minto Nursing Service.—In 1905, there was one organisation existing in the Punjab and the United Provinces called the Up-Country Nursing Association for Europeans in India, which was established in 1892. This Association carried out very useful work in certain parts of India, but was hampered by want of funds. For this reason it was found impossible to extend their organization and the

urgent need for a larger number of trained nurses at charges within the reach of all classes was much required. The late Lady Curzon worked energetically to provide an enlarged nursing organization, but principally for financial reasons, was unable before leaving India to bring her scheme to fruition. The Home Committee of the existing Association recognizing the need of expansion approached Lady Minto before she left England in 1905 and begged her assistance and co-operation. After much consideration and discussion with the Government of India, Lieutenant-Governors and Commissioners of Provinces, the present Association was established. In 1906 an appeal was made by Lady Minto to the public both in England and India to start an endowment fund. This appeal was most generously responded to. Each year the endowment fund has gradually increased, and with the assistance of a Government grant, homes for nurses have been established in seven Provinces of India and Burma, of which the original Association formed the nucleus. To avoid confusion with other Associations, the enlarged organisation, by request of the Home Committee, was named "Lady Minto's Indian Nursing Association" carrying on the same work as before, namely, that of selecting suitably trained nurses in England, and making the necessary arrangements for their transfer to India. Hon. Secretary, Lieut.-Col. Sir J.R. Roberts, C.I.E., I.M.S., Simla; Hon. Secretary, Home Branch, Lieut.-Col. Sir Warren Crooke-Lawless, Kilcrone, Cloyne, Co. Cork.

Nurses' Organizations.—The Trained Nurses' Association of India and the Association of Nursing Superintendents of India are not Associations to employ or to supply nurses, but are organizations with a membership wholly of nurses with the avowed objects of improving and unifying nursing education, promoting *esprit de corps* among nurses, and upholding the dignity and honour of the nursing profession. The Associations have a membership of 202, including nurses trained in ten or more different countries, Europeans, Americans, New Zealanders, Australians and Indians. The Association of Superintendents was started in 1905 as the Association of Nursing Superintendents of the United Provinces and the Punjab, but by the next year its membership had spread over the country to such an extent that the name was changed to include the whole of India. The Trained Nurses' Association was started in 1908, and a monthly Journal of Nursing began to be published by the two Associations in February, 1910. The Associations have since become affiliated with the International Council of Nurses.

Below are given names of Officers of the Associations:—

Trained Nurses' Association of India.

President. Miss Bartleet, Peach Cottage, Coonoor. *Hon. Secretary and Treasurer.* Miss Wilkinson, S. Stephen's Hospital, Delhi.

Association of Nursing Superintendents.

President. Miss Mill, St. George's Hospital, Bombay. *Hon. Secretary and Treasurer.* Mrs. Blackaby, South Ville, Colaba.

Indians Abroad.

The Indian is naturally averse from emigration beyond the seas. Nevertheless there are some hundreds of thousands of Indians resident in other lands as labourers, shopkeepers or professional men. Their total number relatively to the population of the Indian Empire is very small being something under two million. In itself, however, it is considerable; and it acquires an extrinsic importance from the social and political issues involved in the settlement of Indians, either as indentured labourers in Crown Colonies, or as free residents in self-governing countries.

The right to migrate.—From the Imperial standpoint the case of Indian migration to the self-governing Dominions is much the more important, and for a time the problems arising therefrom became acute. There were two centres of difficulty—South Africa and British Columbia; and in South Africa the old trouble has recrudesced in a form that threatens once again to become acute. In each country the situation involved particular local problems of extreme difficulty. But before passing to a discussion of them it is necessary to refer to the larger question of the right of migration within the Empire. The intense feeling aroused in India by the disabilities suffered by Indians in the two countries named was primarily due to the belief that Indians were being denied the common rights of British citizenship. Without attempting to define the term "British citizenship," which is not so easily susceptible of definition as may be imagined, it must suffice to observe that unrestricted migration within the Empire does not appear to be the common right of His Majesty's subjects. The laws of the Dominion of Canada and the Commonwealth of Australia confer powers of exclusion of would-be immigrants hailing from any part of the Empire. These laws have been enforced against Englishmen on various grounds. The ground of exclusion is usually economic, and it is on that ground that the Dominion objection to unrestricted immigration from India operates. It is unfortunately inevitable that the problem assumes in the popular mind a racial complexion. But in actual experience it is the clash of economic interests and the possible political difficulties involved in the settlement of Indians in large numbers in the self-governing Dominions which the statesmen of the Empire have to take into account.

The first attempt to deal with the right of migration from a universal and Imperial standpoint was made by Lord Hardinge. In his address to the Imperial Legislative Council on September 8, 1914, he suggested that an endeavour should be made to lay down a principle of **reciprocal treatment** acceptable to all the Dominions, whereby emigration might be restricted in India itself by a system of passports, while the Dominions might give facilities to a moderate number of immigrants under certain conditions. This suggestion met with general approval in and out of India, and eventually bore fruit at the deliberations of the Imperial Conference and War Cabinet in 1917 and 1918. In the former year a Memorandum was pre-

sented on behalf of the India Office setting forth in detail Lord Hardinge's system of reciprocity, and in the latter year the following resolution was agreed to unanimously by India and all the self-governing Dominions:—

"(1) It is an inherent function of the Governments of the several communities of the British Commonwealth, including India, that each should enjoy complete control of the composition of its own population by means of restriction on immigration from any of the other communities.

"(2) British citizens domiciled in any British country, including India, should be admitted into any other British country for visits, for the purpose of pleasure or commerce, including temporary residence for the purpose of education. The conditions of such visits should be regulated on the principle of reciprocity as follows:—(a) The right of the Government of India is recognised to enact laws which shall have the effect of subjecting British citizens domiciled in any other British country to the same conditions in visiting India as those imposed on Indians desiring to visit such country; (b) such right of visit or temporary residence shall in each individual case be embodied in a passport or written permit issued by the country of domicile and subject to *visé* there by an officer appointed by and acting on behalf of the country to be visited if such country so desires; (c) such right shall not extend to a visit or temporary residence for labour purposes or to permanent settlement.

"(3) Indians already permanently domiciled in the other British countries should be allowed to bring in their wives and minor children on condition: (a) That not more than one wife and her children shall be admitted for each such Indian; and (b) that each individual so admitted shall be certified by the Government of India as being the lawful wife or child of such Indian."

In regard to the above resolution the present position in the principal self-governing Dominions is as follows:—

SOUTH AFRICA.—No legislation is necessary to carry the resolution into effect, as it is merely a re-statement of the policy embodied in the Immigrants' Regulation (Restriction) Act of 1913 and the Indians Relief Act, No. 22 of 1914.

NEW ZEALAND.—No legislation necessary.

CANADA.—The Committee of the Privy Council of Canada has recommended that "certain modifications of the restrictive provisions of the Immigration Act and regulations should be made for the relief of such of our fellow-British subjects of the East Indian race as may be effected by the resolution."

AUSTRALIA.—The Commonwealth Government has made the following decisions:—(a) The Government agrees to the admission on passports of Indian merchants, students, and tourists with their respective wives the exemption to continue without necessity for annual

application as long as the status is preserved. (b) Indians domiciled in Australia may bring one wife and minor children. (c) Australians visiting India will require to obtain passports. (d) Legislative proposals will be submitted to Parliament to place Indians on an equality with other British subjects as regards old age and invalid pensions but admission to the Parliamentary franchise is not approved at present."

In South Africa the trouble gathered round the disabilities of Indians already settled there. The question of immigration restrictions, though important, held a less prominent place in the agitation. The most acute point of the controversy was the annual £3 head tax in Natal. Restrictions on the migration of Indians from one State of the Union to another was another sore point. The requirement to take out trading licenses was also felt to be a vexatious and invidious distinction between Indian and European traders, and it was round this point that the controversy in the Transvaal was centred. While the controversy was at its height, an Act was passed in the Union Parliament, restricting entry into South Africa to the wife or child of a lawful immigrant or resident who was the wife or child of a monogamous marriage. In a case brought before the courts it was decided that the only wife of a marriage solemnised according to the rites of a religion permitting polygamous marriages could not be admitted. The leaders of the agitation in South Africa adopted passive resistance tactics, which brought large bodies of Indian workmen in Natal into conflict with the police. The situation became acute, and a strong demand arose in India for the appointment of a Government Commission to enquire into the whole question. The Union Government appointed a Commission, and invited the Government of India to send a representative. Sir Benjamin Robertson, Chief Commissioner of the Central Provinces, was selected. The Commission reported on the whole favourably to the Indians.

The Indians' Relief Act, 1914, gives effect to those five of the 14 recommendations made by the Commission which necessitated legislation. First by the deletion of certain words from the Immigrants' Regulation Act, 1913, an Indian, married in accordance with the rites of a religion by the tenets whereof polygamy is recognised, is enabled to introduce into the Union one wife as well as her minor children by him, provided the Indian has in the Union no other wife. Another recommendation of the commission to which effect is given is as follows: An Indian man and an Indian woman may, on a joint application to a magistrate or marriage officer, and on complying with certain prescribed formalities, obtain registration of such a union between them as is *de facto* a monogamous union, and such registration will constitute a valid and binding marriage between them with all the incidents thereof, and will be recognised in the Union as such, notwithstanding that, by the tenets of the religion which they profess, polygamous marriages are recognised.

The third recommendation of the Commission to which effect is given is a provision for the appointment of Indian priests as marriage officers under the marriage laws of the several provinces

of the Union. So far as Cape Colony is concerned this had been possible, as regards the Mohammedan religion, under Act No. 1 of 1860, while Law No. 19 of 1891 of Natal contained a similar provision. Under the new Act any Indian priest may be appointed a marriage officer for the purpose of the marriage laws of any province of the Union, and a marriage solemnised by him will, if solemnised in accordance with the rites and formularies of his religion and without any prescribed statutory words signifying the binding nature of the ceremony, be recognised as valid.

Another provision provides for the repeal of that section of the Natal Indian Immigration Laws which imposed an annual licence of £3 on Indians who, introduced as indentured labourers, failed to reindenture at the termination of their contracts.

The Smuts-Gandhi Agreement.—With the measure of relief afforded by the Act of 1914 Mr. M. K. Gandhi, who had gone to South Africa in connection with the passive resistance movement, expressed himself as satisfied: and certain correspondence passed between him and General Smuts, who was then the Minister of the Interior, in which an agreement was arrived at with regard to Indian traders in the Transvaal. The following extracts from the correspondence summarise the agreement and are of importance because of the part they played in 1919 when the controversy was revived:—

(a) From a letter of the Secretary for the Interior to Mr. Gandhi, dated June 30, 1914: "With regard to the administration of existing laws, the Minister desires me to say that it always has been, and will continue to be, the desire of the Government to see that they are administered in a just manner with due regard to vested rights."

(b) From the same letter: "In conclusion General Smuts desires me to say that it is, of course, understood and he wishes no doubts on the subject to remain, that the placing of the Indians' Relief Bill on the Statute Book of the Union, coupled with the fulfilment of the assurance he is giving in this letter in regard to the other matters referred to herein touched upon at the recent interviews, will constitute a complete and final settlement of the controversy which has unfortunately existed for so long, and will be unreservedly accepted as such by the Indian community."

(c) From a letter of Mr. Gandhi to the Secretary for the Interior, dated July 7, 1914: "By vested rights I understand the right of an Indian and his successors to live and trade in the township in which he was living and trading, no matter how often he shifts his residence or to place business from place in the same township."

(d) From a letter of Mr. Gandhi to the Secretary for the Interior, dated June 30, 1914: "The passing of the Indians' Relief Bill and this correspondence finally closes the passive resistance struggle. . . . As the Minister is aware, some of my countrymen have wished me to go further. They are dissatisfied that the trade licenses laws of the different Provinces, the Transvaal Gold Law, the Transvaal Townships Act, the Transvaal Law 3 of 1885, have not been altered so as

to give them full rights of residence, trade and ownership of land. Some of them are dissatisfied that full interprovincial migration is not permitted, and some are dissatisfied that on the marriage question the Relief Bill goes no further than it does. They have asked me that all the above matters might be included in the passive resistance struggle. I have been unable to comply with their wishes. Whilst therefore they have not been included in the programme of passive resistance, it will not be denied that some day or other these matters will require further and sympathetic consideration by the Government. Complete satisfaction cannot be expected until full civic rights have been conceded to the resident Indian population."

In 1919.—The controversy again broke out, and this time it was confined to the Transvaal. The points at issue were as follows:—

(1) The interpretation of Mr. Gandhi's definition of "vested rights" was disputed. On the one hand it was held that "vested rights" meant "the rights existing at the time of the agreement", and it was accordingly alleged that the Indians who opened shops and carried on businesses in townships in which they were not licensed to trade in 1914 had broken the terms of Smuts-Gandhi agreement. It was further contended that the word "successor" in the definition meant "legal successor or heir," and that those Indians who had sold their businesses to other Indians had in that respect also infringed the agreement. On behalf of the Indians, on the other hand, it was argued that "vested rights" meant the inherent rights of the whole Asiatic community—the right to trade—whether the rights were being exercised by any particular man at the time of the agreement or not, and included even the inherent rights of the unborn. As regards "successor", that, the Indian community maintained, meant "any successor in title, no matter how he acquired his right to succession, whether he purchases it or otherwise."

(2) The Transvaal Gold Law of 1908 (No. 35) as interpreted in the judgment of Krugersdorp Municipality *versus* Beckett provides in Section 130 that no right under that law may be acquired by a coloured person, and that no holder of a right may permit any coloured person other than his *bona fide* servant to reside on or occupy ground held under such right. Under Section 131 no coloured person is permitted to reside on proclaimed land in the Mining Districts of Johannesburg, Boksburg, and Krugersdorp except in locations, etc., appointed by the Mining Commissioner. To obtain relief from the provisions of this Act as thus interpreted the Transvaal British Indian Association petitioned Parliament in February, 1919.

(3) Although it was decided in the case of Motan *versus* the Transvaal Government that the Commissioner of Inland Revenue cannot refuse to issue general dealers licenses to coloured persons, yet as far as licenses for grocery shops, eating-houses, etc., are concerned, these are controlled by the municipalities, who have the right to withhold licenses if in the opinion of the Councils the applicant is not a desirable person to hold such license. Under this power Transvaal municipalities, especially that of Krugers-

dorp, consistently refused licenses to Indians on the sole ground that they were Indians. In several cases the Magistrate of Krugersdorp overruled the decision of the Council; and the municipalities have denied that they refused licenses to Indians as such. From this alleged systematic refusal of licenses by the municipalities the British Indian Association also petitioned Parliament for relief.

(4) By the Transvaal Law 3 of 1885 it was provided that Indians and Asiatics generally "may not be the owners of fixed property (i.e., land) in the Republic." This law is still in force. But by Act 31 of 1909 two or more persons may form a private limited liability company, and there was no provision of the law preventing such a company from owning land. Profiting by this state of the law, it became the practice of Indians to form such companies and by this means obtain that ownership of land which was denied them by the law of 1885. This was alleged to be a contravention of the spirit of the Smuts-Gandhi agreement, and aroused considerable feeling in the Transvaal.

In March 1919, in consequence of the petition mentioned above and of the acute bitterness that had arisen as a result of the controversy, the Union Parliament appointed a Select Committee to report on the matter. The Committee reported on April 30 and recommended (a) That the vested rights of Indians who were carrying on business in proclaimed Mining Areas in June 1914 should be respected. (b) That the vested rights of Indians who since that date obtained trading licenses and are carrying on business on such areas should also be respected. (c) That Indians should have the right to transfer their existing businesses to other Indians legally residing in the Transvaal. (d) That steps should immediately be taken to render it impossible for any Asiatic in the future to obtain a license for a new business. (e) That Transvaal law 3 of 1885 should be amended so as to extend the land-owning disabilities therein to any companies of which the controlling interest is possessed by Asiatics. Thus, "vested rights" were held to be actual existing, and not potential, rights; while "successors" were defined as "successors in title."

The Asiatics (Land and Trading) Amendment Act, 1919, gives effect to the recommendations of the Committee. It had a stormy passage through the House and entirely satisfied neither the Indians nor those whose feelings are anti-Indian. The Indians objected to the recommendations (e) and (d) above, and the anti-Indians fought hard against recommendation (c). To placate the anti-Indians and to obtain the passage of the Bill through the House, the Government had to promise to appoint a Parliamentary Commission to go into "the whole Asiatic question in the Transvaal." The Bill also aroused considerable feeling in India, and Mr. Montagu, the Secretary of State for India, suggested to the Union Government that India should be represented on the Commission by one official and one non-official. After negotiations between the Union Government and the Government of India, it was announced that India was to be represented "not on but before" the Commission by Sir William Robertson; and

in February of the present year the personnel of the Commission was published as consisting of the following four members:—Sir Johannes Lange, Puisne Judge of the Supreme Court; Griqualand West, chairman; Lieutenant-Colonel Scott Wylie, of Durban, Natal; Mr. William Duncan Baxter, M. L. A., of Cape Town; and Mr. Henry John Hofmeyr, of Johannesburg, Transvaal. At the same time the terms of reference were announced, as follows:—To enquire and report on the provisions of law affecting:—(a) The acquisition of land and rights affecting land in the Union by Asiatics and persons of Asiatic descent for trading or other purposes. (b) The trading or carrying on of business by such persons generally or in specified localities. (c) To consider whether it is in the public interest to alter the law in any respect, and (d) To make recommendations with regard to any difficulties and grievances which may have arisen in connection with (a) and (b).

In the meantime both sides are busy preparing their cases for presentation before the Commission. On the one hand a South African League (it was originally called the Anti-Asiatic League) was formed in the Transvaal to combat "the Asiatic menace", to urge "the stringent application" of all laws imposing disabilities on Asiatics, and to collect evidence for submission to the Commission. A large and influential congress at which were present delegates representing trade unions, Chambers of Commerce, and political, commercial and industrial interests in general, was held in Pretoria on September 4 and 5 to inaugurate the league. Violent anti-Indian speeches were delivered, and extreme resolutions were passed, including one which urged the Government to repatriate all Indians in the Transvaal, after paying them monetary compensation. On the other hand, in August an Indian National Congress was held at Johannesburg, which was attended by Indian delegates from all parts of the Union. Twenty-three resolutions were passed demanding the abolition of all disabilities, the granting of full civic rights, including political franchise and the right of interprovincial migration, and the provision of more liberal educational facilities.

In British Columbia, the trouble over Indian immigration came to a head in the early part of 1914, when a ship-load of Indians was despatched direct from the Far East to Vancouver. It was held up in the harbour there for several weeks. The passengers were not allowed to land. An appeal to the Canadian courts resulted in the rejection of their claim, and eventually they were shipped back to India. The arrival of the Komagata Maru in Calcutta on September 26, 1914, was the occasion of a most lamentable incident. Anticipating an attempt to organise a political demonstration, the authorities provided special trains to convey the returned immigrants to their homes in the Punjab, and had taken power, under Ordinance V of 1914, to require them to do so; some sixty men immediately proceeded to their homes, but the balance under the leader, Gurdit Singh, endeavoured to force their way to Calcutta. They were turned back by the Military, and whilst arrangements were being made for a second special train,

opened fire on the Police and Officials. The Military dispersed the immigrants by fire, and the majority were afterwards arrested. Sergt. Eastwood, Calcutta Police, and Mr. Lomax, of the E. B. S. Railway, were killed; the Punjab Police had one killed and six injured; sixteen rioters were killed, as well as two onlookers. The Government of India appointed a commission under the Presidency of Sir William Vincent to investigate the matter and it took evidence in Calcutta and the Punjab.

There are some 4,000 Indians already settled in British Columbia, chiefly Sikhs. They work as agricultural labourers, in factories and lumber yards, and also on the railways. The desire amongst them to bring their wives and families out from India points to the fact that they are fairly prosperous and find the conditions of life in the Colony agreeable. The attitude of the Colonial authorities towards them is governed by the general objection to Asiatic immigration. It is felt that the unrestricted entry of Asiatics would threaten the existence of British Columbia as a "White man's country." The immigration of Japanese and Chinese is regulated by special treaties with their Governments. The number of Japanese is limited to a few hundreds annually. Chinese immigrants pay a head tax of 500 dollars on entry.

An exaggerated danger.—Making every allowance for the Dominion standpoint, those acquainted with the internal condition of India cannot but feel that the fears that the self-governing colonies may be deluged by Indian immigration are greatly exaggerated. The total number of Indians resident out of India is under two millions, and of these the majority are to be found in tropical countries. Ceylon alone has 900,000 of them. There is a quarter of a million in Mauritius, about another quarter of a million in British Guiana and the West Indies, and 230,000 in the Straits Settlements and Malay States. Of the self-governing Dominions South Africa has by far the largest share, her Indian population being a little under 160,000, Natal alone accounting for 133,000. But this is not the result of ordinary migration. The nucleus of the South African Indian community was formed artificially by Natal herself. Until 1911, when it was stopped by the Government of India, there was for many years a steady stream of indentured immigration into Natal to supply labour to the sugar and other industries of that colony. The natural increase of the Indian population in South Africa is now much larger than the increase by immigration. In the whole Australian Commonwealth there are not more than 7,000 Indians. The principal movement of Indians to the Dominions occurred in 1907-8, the total immigration being under 7,000. Of this number it is estimated that not more than 1,200 now remain in Canada, there having been a heavy exodus to the United States, while quite a number have returned to India. The significance of these trifling totals must be viewed in the light of the conditions prevailing in India. Here, it is true, there is a vast population. Were these 300 millions subjected to the economic conditions of Europe and were they imbued by

the adventurous and ambitious spirit of Europeans, there would be good ground for alarm in the Dominions at the possibility of an overwhelming influx of Indians. But those are precisely the conditions that do not obtain in the Indian Empire. The demand for labour in India is always greatly in excess of the supply. The tea-planters of Assam are obliged to compete with the Crown Colonies in an elaborate system of cooly recruitment. Labour-shortage is a chronic difficulty with the cotton mills of Bombay. As industrial expansion proceeds and agricultural methods improve, as more land is brought under cultivation, there must be a diminishing likelihood of emigration from India on any large scale. Add to this the inherent reluctance of the Indian to go far from home, and it will be apparent that the danger of "white men's countries" being swamped by Indian immigrants is at the least remote. It is never likely to assume such proportions as would pass the wit of statesmen to control.

Similarly, the fear of economic competition which has occasioned the present controversy in the Transvaal, is equally unfounded. The Indian trader in the Transvaal caters for a very limited portion of the community—chiefly natives, "coloured" persons, and what in South Africa are called "poor whites" (that is, white unemployed)—though a certain number of respectable Europeans with small incomes visits his emporiums surreptitiously. In this sphere the Indian succeeds because the white trader who caters for the same classes of the community is usually neither as industrious, as thrifty, as honest, nor as skilful as the Indian. The truth is that the Indian problem does not in the eyes of the South African stand alone. It is a part, and a minor part, of the larger problems of race and colour that he has to deal with in his endeavour to make South Africa a white man's country. He is not actuated by malice against the Indian as such; it is merely that the Indian problem, coming as it does on the top of the many other similar problems, is regarded by him as an extremely annoying and unnecessary "last straw." On the other hand, the Indian views the disabilities under which he is put as so many stigmata of inferiority. There is thus considerable emotion on either side, and the problem is accordingly difficult of solution. General Smuts is known to be favourably disposed towards Indians and his services to India as the only Dominion statesman in the War Cabinet have been many and conspicuous. He may be relied upon to do as much to alleviate the position of the Transvaal Indian as the very strong anti-Indian feeling in the North of the Union will allow. On their side, the Transvaal Indian and his sympathisers in India would do well to recognise that this feeling exists, and refrain from weakening General Smuts's hands by demanding at the present juncture full civic rights and complete political equality. Such demands are construed by the anti-Indians as being a breach of the Smuts-Gandhi agreement of 1914 (see above), which General Smuts offered as "a complete and final settlement;" and though a glance at the correspondence shows that Mr. Gandhi replied specifically that "some day or other these matters will require further and sympathetic consideration by the Government," yet nothing

could be more unwise than to prosecute extreme demands at a time when the strength of anti-Indian feeling in the North makes it impossible for those demands to receive logical, much less sympathetic, consideration.

Indentured Emigration.—The institution of indentured labour in the tropical colonies of the Empire is one of long-standing. As far back as 1864 indentured emigration from India to the British West Indies was in progress under Government control. In the case of several of the tropical colonies there has been no interruption since then in the steady inflow of several thousands of Indian labourers annually. In Mauritius, the Straits Settlements, the Federated Malay States and Natal the system for various reasons has come to an end; but in all those countries there is now a large population of Indians, permanent or temporary, engaged as free labourers or in independent positions. The principal colonies in which indentured emigration still prevails are British Guiana, Trinidad and Fiji. Even here, however, there has been a progressive decline during recent years, owing in part to the increased difficulty of recruiting in India. This difficulty arises entirely from the growing demand for labour within the Indian Empire, consequent upon industrial expansion.

The indentured system has been the subject of much controversy. It is disliked in India and by some people in England, because it seems to present features analogous to slavery—in that for the term of his indenture the labourer is not a free agent; he is *ad scriptus glebae*, and bound to serve the employer to whom he is assigned on terms which are absolutely fixed. In the colonies themselves the system is unpopular on two grounds—(1) it tends to depress the current rate of wages, (2) only a minority of the time-expired coolies become permanent settlers, the majority claiming their return passage and taking money out of the colony in the form of savings. From the point of view of the labourer himself, the indentured system, if it has any true resemblance to slavery, is a kind of bondage that is easily supportable. He is supplied with a free dwelling under highly sanitary conditions, his wages are fixed on the basis of the rate prevailing in the open market; no deductions are to be made therefrom for rent, hospital accommodation, medical attendance or medicine, which the estate proprietors are bound to provide. Free schooling is available for his children; and if, at the end of his indenture, he elects to remain in the Colony he is given a free grant of Government land. These are the conditions prevailing in British Guiana; but, with the exception of the grant of land they are similar to those in other colonies where indenture-immigration is in force. The permanent Indian population in British Guiana is 127,000; in Trinidad 113,000, in Fiji 40,000, in Mauritius 258,000 and 113,000 in Natal. Other colonies, such as Jamaica and Dutch Guiana (Surinam) have small communities, amounting in each to a few thousand only of time-expired Indian coolies. Ceylon, the Straits Settlements and the Federated Malay States continue to attract Indian labourers, chiefly from Southern India, although no indenture system now exists in those countries.

The method of recruiting indentured coolies was fully described in the 1916 edition of the Indian Year Book, pp. 467-8.

Indians in the Colonies.—Statement showing approximately the number of British Indian subjects in the various colonies and Dominions—

Trinidad	117,100
British Guiana	129,389
Jamaica	20,000
Fiji	44,220
Surinam	26,919
Reunion	3,012
Mauritius	257,697
Federated Malay States	210,000
Straits Settlements Figures not available.
Cape Colony	6,606
Natal	133,031
Transvaal	10,048
Orange Free State	106
Southern Rhodesia Figures not available.
Australia	Do.
New Zealand	Do.
Canada Under 2,000 (the number is uncertain).

Commission of Inquiry Appointed.—About the end of 1912, the Government of India appointed a Commission of two, Mr. J. McNeill and Mr. Chiman Lal, to report upon the conditions of life of the Indian immigrants in the Colonies. The Commissioners were also desired to submit recommendations as to any arrangements which may be considered desirable to promote their welfare. The main points to which they were to direct attention were: the housing of the labourers and the sanitary conditions in which they live; the adequacy of medical arrangements; whether tasks are moderate, hours of work suitable and wages adequate; whether the administration of justice is fairly conducted and whether labourers meet with any difficulties in prosecuting employers or defending themselves; whether the penalties imposed by the labour laws are in any case excessive or unsuitable; whether the labourers are subjected to undue restrictions, outside working hours, and whether they enjoy sufficient facilities for proceeding to the Protector of Immigrants or to the Magistrate to lodge complaints; the relations generally between employers and labourers; whether facilities are afforded to Indian labourers in social and religious matters; and whether repatriations are promptly made and whether immigrants experience any difficulty in obtaining repatriation. They were desired to report specially in respect of certain features of the system. These were connected with any excessive number of prosecutions of labourers by employers, the position of the Protector of Immigrants, the terms of

agreement which the emigrant is required to sign; the position of free Indians, female indenture, and suicides and immorality on the estates.

Merits of the system.—The Commissioners were engaged in their investigation for about 11 months. They visited Trinidad, British Guiana, Jamaica and Fiji, and also the Dutch Colony of Surinam which is permitted to recruit labourers under contract of indenture in India. Their report is in two parts, Trinidad and British Guiana taking up the first, and the rest the second part. After a detailed exposition of the state of things in respect of the points mentioned above in each of the colonies visited by them, the Commissioners observe: "We are convinced that notwithstanding our possibly disproportionate presentation of the unsatisfactory features of the existing system, a careful study of the facts elicited during our inquiry will result in the conclusion that its advantages have far outweighed its disadvantages. The great majority of emigrants exchanged grinding poverty with practically no hope of betterment for a condition varying from simple but secure comfort to solid prosperity. Emigrants live under very much better conditions than their relatives in India, and have had opportunities of prospering which exceeded their own wildest hopes. They became citizens of the colonies to which they emigrated and both they and their descendants have attained to positions commanding general respect and consideration." As regards the moral condition of the immigrants, the Commissioners observe: "There is no doubt that the morality of an estate population compares very unfavourably with that of an Indian village, and that the trouble originates in the class of women who emigrate." The rates of suicide among the indentured labourers are high as compared with those among free Indians in the colonies, and much higher than those among the population in the provinces of India. In Trinidad the suicide rate for the total Indian population was 134 per million and for the indentured 400 per million. The suicide rates among Indians in the other colonies were: British Guiana, unindentured, 52 per million, indentured 100 per million; Jamaica, 396 per million, suicides amongst the unindentured not being separately recorded; Dutch Guiana, unindentured, 49, indentured 91; Fiji, unindentured, 14 per million, indentured, 926 per million. According to a statement prepared by the Department of Commerce and Industry of the Government of India, the average suicide rates for India are, the Bombay Presidency 28·8 per million, the United Provinces whence most emigrants are drawn, 63 per million and Madras, the other chief source of supply to Fiji, 45 per million.

Indian Feeling.—For some years past, there has been a growing feeling amongst Indian leaders that the indentured system of labour was inconsistent with national self-respect, and should be stopped. This feeling originated in the belief that the treatment accorded to Indians in the self-governing Dominions especially in South Africa, was due to the Dominion people coming to think poorly of Indians as a race because of the class represented by indentured labourers. In 1910, the Government of India accepted a resolution moved by the late Mr. Gokhale

putting an end to the indentured system so far as Natal was concerned. In 1912, however, they opposed his resolution to abolish the system altogether. Opinion in India has been ripening fast against the system, and it is reinforced by the rapid industrial development of the country making largely increasing demands on the labour market, depleted to some extent by the ravages of plague during the last twenty years. The startling figures of suicide and the admissions as regards the prevalence of gross immorality among estate populations, have roused public feeling in the country, and this has been accentuated by well-authenticated stories of young caste women of respectability having been deceived by dishonest recruiting agents to the emigration depots. Mr. C. F. Andrews, late of St. Stephen's College, Delhi, and now connected with the school conducted on his own original lines by Sir Rabinranath Tagore—the poet-laureate of Asia, as the Viceroy aptly called him—at Bolpur in the Bengal Presidency, was deputed by the Indian Citizenship Association of Bombay to visit Fiji, and to investigate the conditions which make for the frightful rate of suicide recorded in that colony. He was accompanied by Mr. W. Pearson, who is also associated with the Bolpur School. Messrs. Andrews and Pearson, it may be mentioned, visited South Africa where the Passive Resistance struggle led by Mr. Gandhi was at its height, and rendered valuable service in bringing about the settlement that was eventually arrived at.

Protected Emigration.—In a speech delivered in Council on September 5, 1916, H. E. the Viceroy stated that the Government of India were contemplating the control of the operations of persons engaged in supplying labour to the Colonies. "Labourers," said His Excellency, "have a right to emigrate if they wish, and it would be very unwise and very undesirable on our part to prevent them, and we are, therefore, trying to devise arrangements which will secure that recruitment in this country is conducted under decent conditions, that a proper sex ratio will be maintained and that on arrival in the country of their destination they will be properly treated and allowed to engage themselves on terms at least as free as those obtaining at present in the Malay Peninsula, where a labourer can leave his employer by giving a month's notice. I think it will be clear to all who have studied the question that the Government of India would be departing gravely from its duty if it allowed emigrant labour to leave this country without proper protection and safeguards. There are a certain number of labourers, I believe a very small number, who emigrate as genuine free labourers, that is to say unassisted by pecuniary help and uninvited by any interested agency. But, if we confine ourselves to the abolition of our existing indentured emigration, a position will arise in which the parties interested in procuring Indian labour will be free to induce labour to emigrate by pecuniary help under any conditions they like, so long as the labourer does not go under indenture. The abuses likely to arise out of such a state of things would be very serious. I need only refer to the state of affairs which existed before the amendment of the Assam Labour and Emigration

Act, in connection with so-called free labour. The consequence of this system was, as Sir Charles Rivaz put it in his speech before the Legislative Council in 1901, that a horde of unlicensed and uncontrolled labour purveyors and recruiters sprang into existence, who under the guise of assisting free emigration made large illicit gains by inducing, under false pretences, ignorant men and women to allow themselves to be conveyed to Assam. These emigrants were, it is true, placed under labour contracts on arriving in that province, but the abuses complained of arose in connection with the recruitment and not with the contract. Similarly when the system of indentured emigration first arose in India the only caution required was that intending emigrants should appear before a magistrate and satisfy him as to their freedom of choice and their knowledge of the conditions they were accepting. It was shown, in a report submitted in 1840, that abuses undoubtedly did exist in connection with recruitment in India, abuses which the constantly increased safeguards provided by successive Acts of the legislature were designed to correct. Uncontrolled recruitment cannot, it is clear, be permitted under any circumstances. Lord Hardinge promised, and I associate myself with him, to deal with certain points. These points were the better supervision of colonial recruiting in India, the insertion of information regarding the penal conditions attaching to labour contracts in the indenture signed by intending emigrants and the undesirability of labourers in the colonies being compelled to do work repellent to their caste ideas and religious beliefs. Regarding the first matter we have already consulted local Governments very fully when asking their views as to the precautions which will be required after the **abolition of indentured emigration**. As to the second point you are no doubt aware that Fiji has now abolished imprisonment for labour offences and other colonies are arranging to follow suit. But there will still be certain provisions remaining which we think should be brought to the notice of intending emigrants and we have arranged to do this as soon as the various colonial legislatures concerned have passed the amendments to which I have alluded."

Indenturing Abolished.—In 1917 the situation underwent a radical change. Whilst no official pronouncement was made, the idea gained popular acceptance that the Secretary of State had proposed that the system of indenturing should be continued for a further period of five years, pending the working out of an alternative system of recruitment. This aroused strong protests throughout the country. Whilst a reasonable desire was manifest not to add to the difficulties of the Government and of the colonies in time of war, it was felt that the continuance of a system open to such grave objections for ten years—five years for recruitment and five years for the new indentures to expire—was too long. Public meetings were held throughout the country. Government solved the difficulty by prohibiting all emigration from India, as a war measure, on account of the shortage of labour; subsequently assurances were given that the system would never be revived. Thus indenturing ended by a side issue, but nevertheless one which was quite definite. The question of existing indentures, however, still remained to be settled. During

1919 considerable steps were taken towards improving the conditions under which those Indians who still had to work under the system, lived; while in regard to Fiji, the Viceroy, on November 24, made the following announcement: "The conditions of labour in this island have without doubt been improved during the last few years but not, I am afraid, to the extent which we have demanded. Consequently I pressed for the cancellation of all outstanding indentures by the end of the present year. The Secretary of State for the Colonies has agreed to the cancellation of indentures on all estates on which the principal reforms recommended by Mr. Andrews have not been carried out on the 1st January, 1920, but I am not satisfied with this, and I have asked the Secretary of State to ascertain what would be the cost of commuting the remaining indentures and freeing every Indian labourer in Fiji on the 1st of January next."

Assisted Emigration.—Subsequently a committee sat in London to consider what form of assisted emigration should take the place of the indentures. Its report was issued about the middle of the year and the chief recommendations are here summarised.

Under this scheme the Indian will arrive in the colony entirely free from debt and of any liability for the cost of his introduction. He will be in no sense restricted to service under a particular employer, except that, for his own protection, a selected employer will be chosen for him for the first six months. This employer can be changed, with the approval of the Protector of Immigrants, if substantial reason can be adduced. From the time of his arrival the immigrant will be given land to cultivate for his own benefit. Each male adult employed in an agricultural industry will be granted for his personal use and cultivation a garden plot of one-tenth of an acre after six months' service and a larger plot of one-third of an acre will be made available whenever practicable by way of reward. At the end of three years' employment under any of the employers on the register steps will be taken to ensure that land is available for settlement in the simplest and cheapest manner. In each colony there will be a department responsible for the provision of sufficient land to meet all *bona fide* applications and for rendering it suitable for agriculture by adequate clearing, irrigation and drainage. These holdings will be up to five acres in extent, they will be subject to a reasonable annual rent in the case of lease-holds, and the settlements will be for a period of thirty years. Under the proposed system the immi-

grant can be proceeded against only by way of a civil suit in the ordinary course of law and will not be liable to any criminal penalties. A minimum wage will be fixed, subject to periodical revision. During the first twelve months the children under eleven years will be entitled to free rations while children under five will be given a face milk ration during the whole time that their parents remain in the service of an employer on the register. The provision of married quarters separate from the "single" quarters will be made compulsory upon all employers of more than twenty adult Indian immigrants and will be insisted upon so far as possible in the case of all other employers on the register. This register will contain the names of only "approved employers" that is to say of persons desirous of employing assisted emigrants, who have applied to the Protector of Immigrants and who have been found on inquiry to be suitable. Repatriation will be assisted when it is desired. The emigrants will receive for himself and his dependents half the passage money after three years' service and a larger proportion up to the whole cost after seven years' service.

With regard to recruitment, Emigration Agents will be licensed and paid fixed salaries, with possibly additional money grants for meritorious work. Their work will be supervised by Inspectors of Emigration, who will be men of standing on a graded scale of pay. Over them will be an Emigration Commissioner, who will be a Colonial Civil Service official, and a Protector of Immigrants, appointed by each Local Government to supervise emigration in the province affected. In each colony will be a Protector of Immigrants. The Emigration Depots will be visited by non-official gentlemen of standing in the district as also will be the Central Depot. The emigration of whole families will be encouraged but persons below the age of eighteen will be assisted to emigrate only when accompanied by their parents or guardians. Women unaccompanied by their families will not be assisted and the rule requiring a certain proportion of women to men will be abolished.

The report was published at a time when the political energies of India were concentrated on the development of the Indian constitution and the pending visit of the Secretary of State to discuss these questions on the spot. It attracted little attention. So far as opinion was expressed, whilst recognising that the system was an immense advance on the system of indenture, it was thought undesirable for Government to take so large a part in the direction of emigration to distant lands.

Indians in Great Britain.

More than sixty years have gone by since the Parsi community, in the persons of the late Dadabhai Naoroji and other members of the firm of Cama & Co., led the way in the sojourn of Indians in England for business purposes. This lead it has since maintained, though there are both Hindu and Mahomedan business men firmly established there. Nor are the professions unrepresented, for there are in London and elsewhere practising barristers, solicitors and medical men of Indian birth. Three Indians are on the Secretary of State's Council; and last year another in the person of Lord Sinha led the way as the first Indian to be raised to the peerage and to be appointed a member of the Home Government. The early years of the present century saw the gathering of a new Indian element in permanent residence—that of retired officials (particularly of the I. M. S.) and business men, or people of independent means who from preference or in order to have their children educated in England, leave the land of their birth and seldom if ever visit it again. Further, the stream of Indian summer visitors includes wealthy people who come regularly. In the first years of the war, before the transfer of the Indian Corps in France to Eastern theatres, thousands of our valiant Indian soldiers, wounded or invalided from Flanders, went to England to be nursed back to health in the well-equipped and admirably administered Indian hospitals, some in Hampshire but chiefly at Brighton where the fact is being commemorated by a permanent Indian provided memorial. The investigation of the Joint Committee on the Government of India Bill, 1919, resulted in the sojourn in London for some months of many of the most prominent figures in Indian political life.

The Students.

But under normal conditions it is the student community which constitutes the greatly preponderating element and creates an Indian problem. Its numbers multiplied ten or twelve-fold in the quarter of a century before the war, the increase being especially rapid after 1904 or 1905. There was indeed an artificial inflation some five years later when many youths (some of them ill prepared) were hurried off to the Inns of Court in order to be entered before the standard of the examinations qualifying for admission was raised. This sudden expansion was duly worked off but there was development in other directions, and particularly that of the technical and engineering schools and classes. After a very considerable temporary check caused by the European War the number rapidly expanded last year in spite of pressure in both passage and college accommodation. In addition to the ordinary graduate or under graduate student, there are many youths of good family, some of them heirs of Native States, admitted into our public schools, such as Eton and Harrow. There are always some 200 or 300 Indians, at the Inns of Court. Since the war there has been a welcome increase in the number of technical and industrial students. Altogether, including technical and medical students, there must be 500 young Indians in London. Edinburgh, Cambridge,

Oxford, Glasgow and Manchester stand next on the list, while there are smaller numbers at Birmingham, Leeds, Sheffield and Liverpool.

The Advisers.

It is well known that until a few years ago the young Indians, apart from inadequately supported unofficial effort and the chance of coming under the influence of English friends of their families, were practically left to their own devices. But in April 1909 Lord Morley, as a result of the investigations of an India Office Committee, created for their benefit a Bureau of Information and appointed Dr. T. W. Arnold to the charge of it under the title of Educational Adviser. The Bureau was located in due time at 21, Cromwell Road, together with the National Indian Association and the Northbrook Society, which were thus given spacious quarters for their social work among the young men, without incurring what would otherwise have been the prohibitive cost of heavy rent. (For Burmese students distinct club accommodation is provided in the commodious Albion House, St. Peter's Square, Hammersmith, W. C.). Lord Morley also established an Advisory Committee, mainly composed of influential Indian residents, but which has now ceased to exist, and in India corresponding provincial committees were formed to help and advise intending students. The work of the Bureau rapidly expanded, and in consequence Lord Crewe in 1912 re-organised the arrangements under the general charge of a Secretary for Indian students, Mr. (now Sir) C. E. Mallet who resigned at the close of 1916. He was succeeded by Dr. Arnold under the designation of Educational Adviser for Indian Students to the Secretary of State. Mr. N. C. Sen has followed Dr. Arnold as Local Adviser in London, and there are corresponding officers at the modern provincial universities.

Two strange delusions (in some cases they may be called deliberate misrepresentations) have been propagated in reference to these arrangements. One is that the India Office set up the Bureau in order to track down the wave of seditious sentiment which culminated in the assassination of Sir Curzon Wylie in 1909. As a matter of fact the Bureau was established three months before the commission of that crime, and was proposed at least a year previously. The object, as *The Times* observed in September 1908, was not "to put these young men into political leading strings, nor officially to restrict their liberty. It lies in doing all that is possible to facilitate their educational progress and their general welfare, and in bringing them under wholesome and helpful influence." Dr. Arnold accepted his appointment on the distinct understanding that there would be no espionage.

Removing Barriers.

It is no less of a delusion for the students to hold, as some of their elder fellow-countrymen have encouraged them to do, that the Bureau is responsible for restrictive rules and regulations of colleges and other institutions,

or at any rate for their continuance in spite of protests. So far from blocking the way, the Bureau has been singularly successful in opening closed doors and mitigating any real grievances. Its greatest triumph is that at Oxford and Cambridge, where naturally the difficulties of admission have been most pronounced, it has paved the way to the creation of University machinery to replace its own operations. The Oriental Delegacy at Oxford and the Inter-collegiate Indian Students' Committee at Cambridge have now undertaken all the work hitherto carried on by the Local Advisers, and thus Indian undergraduates are given a welcome *locus standi*. Every element of Government control, so disliked by many of the students, has been eliminated by this practical recognition by the two ancient universities of a special responsibility towards Indians imbibing their culture and traditions. The Secretary of State for India makes grants to these bodies, which are about equivalent to the cost of his former local representatives. Familiarity with the conditions is assured by the appointment of the late Local Advisers as the respective secretaries.

Sir T. Morison's Committee on State Technical Scholarships reported in 1913 that the difficulties encountered by young Indians in supplementing academic instruction by technical experience in factories and workshops are general in character, being also applicable to their English contemporaries, and that there is "on the whole very little evidence of a racial prejudice against Indians." Nor need any youth go to England under misapprehension as to the facilities for his education and their limitations. The excellent "Handbook of Information for Indian Students" issued by the National Indian Association and the Advisory Committee, now in its sixteenth edition (1919) supplies all relevant facts and advice; and on personal details, the Indian Advisory Committees can be consulted.

Persuasion not Coercion.

It is not the case, as some Anglo-Indians of the old type imagine, that the Bureau could easily exercise disciplinary control over all young Indians in London and elsewhere. The fact is that except in respect to holders of Government and some Native State Scholarships it has no disciplinary authority save when parents place their sons under the guardianship of Mr. N. C. Sen or some other Local Adviser, and even in these cases the control can only be exercised in connection with the administration of the regular allowances. The Bureau has had a most beneficial influence in saving scores of

young men from falling into debt, intemperance or marital folly, but this has been exercised not coercively but by friendly personal contact and keeping before them the obligation and necessity from every point of view of adhering to the purposes of culture and equipment for which they have gone to England.

The students have hosts of non-official friends and helpers. Under the presidency of Lord Hawke and the chairmanship of Lord Carmichael an Indian Gymkhana Club has a fine sports centre at Acton, the Mill Hill Park Club's ground having been taken over. The cricket eleven of the Club has an excellent record in matches at Lords and the Oval and with suburban clubs.

Students and the War.

The removal of misunderstanding should be materially promoted by the changed and gratifying conditions brought about by India's response to the call of Empire in the Great War. In this call young Indians in England shared by the formation of the Indian Field Ambulance Corps (which reached a total enrolled strength of 272) and in other ways. Good feeling has also been promoted by the remarkable records of a good proportion of Indian students at the universities when they were almost entirely depleted of Young British contemporaries doing national war service. The distinctions gained are evidence of the better type of Indian student that has recently gone to the United Kingdom and of the generosity with which the universities and colleges there allow Indians to share in the endowments they have at their disposal. While they have been at an advantage from the absence of English competitors, there is no reason to suppose that the standard of attainment required has been appreciably lowered for the benefit of Indians. But with the restoration of normal condition competition is becoming more severe and not least in respect to the pressing claims for admission to the older universities. To the full extent of their capability, with due regard to other responsibilities, the British universities are always ready to admit Indian students of approved ability and attainment; what they cannot stand is the lazy, incompetent and untrained man.

The whole position is sympathetically dealt with in the four annual reports of Sir Charles Mallet from 1913 to 1916 on the work of the Indian Students' Department. (Cd. 7160, Cd. 7719 Cd. 8127, and Cd. 8418 priced at 2½d. each, excepting Cd. 8127, which is 2d.)

Appointments to the Indian Services.

Full details of the regulations governing appointments to the Indian Services are published in the India Office List. The more essential particulars, except as regards the Civil Service and Police,—of which fuller details are given elsewhere in this book—are given below.

Indian Agricultural Service.

The appointments in the Indian Agricultural Service include those of Deputy Director of Agriculture, Agricultural Chemist, Economic Botanist, Mycologist, Entomologist, Professors of Agriculture, Chemistry and Botany at Agricultural Colleges, and the like. Some of these are included in the Imperial Department of Agriculture under the direct control of the Government of India, but the majority are included in the Departments of Agriculture of the several provinces of India. In some cases candidates will be appointed direct to these posts, but in most cases they will be appointed as supernumeraries, will undergo a further course of training in India in Indian agriculture, and will be appointed to posts, for which in the opinion of the Government they are considered suitable, on the regular establishment as vacancies occur. Appointments are made by the Secretary of State for India as occasion may require. Candidates must, as a rule, be not less than 23, nor more than 30 years of age. In selecting candidates for appointment, weight will be given to the possession of (a) a University degree in honours in science or the diploma of a recognised school of agriculture or other like distinction; (b) qualifications in a special science according to the nature of the vacancy to be filled; (c) practical experience. Importance is also attached to bodily activity and ability to ride, and selected candidates have to undergo an examination by the Medical Board of the India Office as to their physical fitness for service in India.

Indian Civil Veterinary Department.

The officers of the Indian Civil Veterinary Department perform or supervise all official veterinary work in India, other than that of the Army, and are debarred from private professional practice in India. Their duties may be divided into three classes, under the following heads:—

- (a) Educational work in veterinary colleges;
- (b) Horse and mule breeding;
- (c) Cattle disease and cattle breeding.

Appointments to this Department are made, as vacancies occur, by the Secretary of State for India. Candidates must not (except on special grounds to be approved by the Secretary of State) be over 26 years of age, and must

Ecclesiastical Establishments (Church of England).

Appointments of Chaplains on Probation are made from time to time by the Secretary of State for India, as vacancies occur. Candidates for these appointments must be Priests who are between the ages of twenty-seven and thirty-four years, and have been for three years altogether in Holy Orders. Applications for nominations should be submitted to the Secretary of State.

A Chaplain will be on probation for three years (a); if confirmed in his appointment at the end of that period, he will be admitted as a Junior Chaplain.

The salary attached to posts in the Indian Agricultural Service will ordinarily be:—

	Rs.
For the first year ..	400 per mensem.
„ second year ..	430 „
„ third year ..	460 „
„ fourth and subsequent years ..	500 rising by annual increments of Rs. 50 a month to Rs. 1,000 a month.

Candidates who are required to undergo a further course of training in India as explained above will be appointed on this scale of salary, commencing on a pay of Rs. 400. Where, for special reasons, a candidate is recruited for direct appointment to one of the regular posts under paragraph 1, his initial pay will be determined with reference to the special qualifications on the length of European experience required for the appointment for which he is specially selected, but his subsequent increments of salary will be regulated by the foregoing scale. In addition to this scale of pay, officers filling appointments directly under the Government of India, as distinguished from appointments under Local Governments (but not including officers holding supernumerary posts, the post of Inspector-General, or the post of Director of the Pusa Institute) will be eligible for local allowances conditional on approved good work, and the Government reserves to itself the fullest discretion as to granting, withholding, or withdrawing them.

possess a diploma from the Royal College of Veterinary Surgeons. Evidence of a knowledge of bacteriology, and of capacity for carrying out original research, will be specially taken into account in estimating the claims of candidates. Good health, a sound constitution, and active habits are essential, and candidates must be certified by the Medical Board of the India Office to be physically fit for service in India.

Pay will be as follows:—On arrival in India Rs. 500 a month, rising by Rs. 40 each year to Rs. 1,100, which rate will continue from the beginning of the 16th to the end of the 20th year of service; after the beginning of the 21st year Rs. 1,200 a month.

The salaries of Chaplains are:—

Senior Chaplains, Rs. 10,200 per annum for five years, and then Rs. 12,000 per annum.

Junior Chaplains, Rs. 6,360 per annum for five years, and thereafter Rs. 8,160 per annum until promoted to be Senior Chaplains.

Chaplains on Probation, Rs. 5,760 per annum.

A Junior Chaplain becomes a Senior Chaplain after ten years' service, excluding the period of probation.

The retiring pay of Chaplains is regulated by the following scale:—

	Per annum.		
	£	s.	d.
After 23 years' service, with an actual residence in India of 20 years, including the period of probation	365	0	0

Ecclesiastical Establishments (Church of Scotland).

The appointments of Chaplains of the Church of Scotland on probation are made from time to time by the Secretary of State for India, according as vacancies occur. Candidates for these appointments must have been licensed for three years and be under thirty-four years of age. Applications for nominations should be submitted to the General Assembly's Committee on Indian Churches along with testimonials based on a personal knowledge of the candidate's qualifications. Chaplains will be on probation for three years (a); if confirmed in their appointment at the end of that period, they will be admitted as Junior Chaplains.

The salaries of Chaplains are:—

Senior Chaplains, Rs. 10,200 per annum, and then Rs. 12,000 per annum.

Junior Chaplains, Rs. 6,360 per annum for five years, and thereafter Rs. 8,160 until promoted to be Senior Chaplains.

	On Medical Certificate.		
	£	s.	d.
After 18 years' actual residence in India, including the period of probation	292	0	0
After 13 years' ditto	173	7	6
After 10 years' ditto	127	15	0

Chaplains on probation, Rs. 5,760 per annum.

A Junior Chaplain becomes a Senior Chaplain after 10 years' service, excluding the period of probation.

The retiring pay of Chaplains is regulated by the following scale:—

	Per annum.		
	£	s.	d.
After 23 years' service, with an actual residence in India of 20 years, including the period of probation	365	0	0

On Medical Certificate.

	On Medical Certificate.		
	£	s.	d.
After 18 years' actual residence in India, including the period of probation	292	0	0
After 13 years' ditto	173	7	6
After 10 years' ditto	127	15	0

Educational Appointments.

The Indian Educational Service comprises those posts in the Educational Department to which appointments are made in England by the Secretary of State, and is thus distinguished from the Provincial Educational Services, which are recruited exclusively in India. It consists of two branches, the teaching, including Principalships and Professorships in the various Government Colleges and Head Masterships in certain High Schools; and the inspecting, including Inspectorships of Schools; but officers may be transferred at the discretion of Government from one branch to the other, and the conditions of pay and service are the same for both. It also includes certain special appointments, such as those of Superintendents of Schools of Art, for which special qualifications are required and special terms of engagement are prescribed. Officers of the teaching branch may be required to undertake duties in connection with the supervision of students in hostels or boarding houses, and with the direction of their studies and recreations. Appointments are made by the Secretary of State as occasion may require. Only laymen are eligible, candidates must as a rule be not less than 23, nor more than 30 years of age, but exceptions are sometimes made as regards the maximum limit only. Candidates must be British subjects, and must furnish evidence of having received a liberal education.

In selecting candidates for appointment, weight will be given to the possession of (a) a University degree in Honours, or equivalent distinction; (b) experience as a teacher; (c) qualifications in special subjects, depending on the nature of the vacancy to be filled. In selecting candidates for inspecting appointments, weight is given to linguistic talent, capacity for organisation and knowledge, practical or theoretical, of educational methods.

The salaries paid are as follows:—A newly appointed Inspector or Professor receives Rs. 500 a month, rising by annual increments of Rs. 50 a month to Rs. 1,000 a month. When this point has been reached, the increase of his emoluments depends upon his promotion, and takes the form of allowances ranging from Rs. 200 to Rs. 500, in addition to the salary of Rs. 1,000. There are at present 30 such allowances. There is in every Province a Director of Public Instruction. The posts of Director of Public Instruction are reserved for the Indian Educational Service so long as members of that Service can be found well qualified to fill them. Their pay differs in different Provinces:—

Three receive a salary of Rs. 2,000—100—2,500 a month.

Two receive a salary of Rs. 2,000 a month.

One receives a salary of Rs. 1,750—50—2,000 a month.

Two receive a salary of Rs. 1,500—100—2,000 a month.

One receives a salary of Rs. 1,250 rising to Rs. 1,500 a month.

Head Masters are appointed on an initial pay of Rs. 500, rising by annual increments of Rs. 50 a month to Rs. 1,000 a month, except in cases in which Local Governments may prefer to recruit on the scale of Rs. 500 a month, rising by annual increments of Rs. 50 a month to Rs. 750 a month. Head Masters are eligible for subsequent transfer to inspectorships or, if qualified, professorships. In all cases, increments of salary are given for approved service only.

For the appointments dealt with above men only are eligible. There are, however, some posts in the Indian Educational Service which are open to women and these comprise appointments as Inspectresses of Girls' Schools, Princi-

pals of Training Colleges, and occasionally Headmistresses of Schools. The salary attached to these appointments is ordinarily Rs. 400 a month, rising by annual increments of Rs.20 a month to Rs. 500 a month.

The Secretary of State is sometimes requested by the Government of India to supply persons to fill temporary vacancies in the Indian Edu-

cational Service, generally professorships in Colleges. Such appointments are made for not less than a university year (about nine months), with a prospect, in the case of thoroughly approved service, of future selection to fill either a temporary or a permanent appointment. The salary is Rs. 500 a month, rising by annual increments of Rs. 50 a month.

Indian Forest Service.

The Secretary of State for India in Council makes appointments of Probationers for the Indian Forest Service, according to the numbers annually required.

Candidates must be not less than 19 but under the age of 22 years.

Candidates must have obtained a degree with Honours in some branch of Natural Science in a University of England, Wales or Ireland, or have passed the Final Bachelor of Science Examination in Pure Science in one of the Universities of Scotland. A degree in Applied Science will not be considered as fulfilling these conditions. Candidates will be required to produce evidence that they have a fair knowledge of either German or French.

The ordinary period of probation will be two years. During that time probationers will be required to pass through the Forestry course at one of the following Universities—Oxford, Cambridge or Edinburgh (subject to the arrangement of a suitable course)—becoming members of that University, if not so already; to obtain the Degree or Diploma in Forestry which it grants; and to satisfy such other tests of proficiency as may be deemed necessary.

During the vacations, the Probationers will, under the direction and supervision of the Director of Indian Forest Studies appointed by the Secretary of State for India in Council, receive practical instruction in such British and Continental forests as may be selected for the purpose.

The Secretary of State for India in Council will make payments to each Probationer at the rate of £120 annually, not exceeding a total of £240.

Probationers who obtain a Degree or Diploma in Forestry, and also satisfy such other tests of proficiency as may be prescribed, will be appointed Assistant Conservators in the Indian Forest

Department, provided they are of sound constitution and free from physical defects which would render them unsuitable for employment in the Indian Forest Service.

The sanctioned scale of the service at present is:—

	Rs.	
1 Inspector-General of Forests	2,650	a month.
1 Assistant Inspector-General of Forests
4 Chief Conservators (Bombay, United Provinces, Burma and Central Provinces)	..	2,150
23 Conservators, in three grades (including President, Forest Research Institute and College and one temporary post of Conservator for Kumaun Circle United Provinces)	}	1,900
		1,700
		1,500
208 Deputy and Assistant Conservators

} Respectively.

An Assistant Conservator of Forests will draw pay at the rate of Rs. 380 a month from the date of his reporting his arrival in India rising by annual increments of Rs. 40 a month to Rs. 700 a month, thereafter by annual increments of Rs. 50 a month to Rs. 1,250 a month in the 20th year of service.

After a service of not less than 20 years, a retiring pension is granted not exceeding the following amounts:—

Scale of Pension.		Maximum Limit of Pension.
Years of Completed Service.	Sixtieths of Average Emoluments.	
20 to 24		Rs. 4,000 a year.
25 and above	30	Rs. 5,000 a year.

Indian Geological Survey.

The Geological Survey Department is at present constituted as follows:—

	Rs.		
1 Director	2,000		
3 Superintendents	1,000	rising by	80 to 1,400
5 Assistant Superintendents—			
For the first five years	350	;;	30 ;; 540
Thereafter	500	;;	50 ;; 1,000
1 Chemist	500	;;	50 ;; 1,000

Appointments to the Department are made by the Secretary of State for India. They will usually be made about July of each year, and the probable number of appointments will, if possible, be announced about two years in advance. The age of candidates should not exceed 25. Besides a good general education, a sound education in geology is essential: a

University degree and a knowledge of French or German will be regarded as important qualifications; and certificates of a high moral character will be required. Candidates must also have had one or two years' practical training in mines, or in technical laboratories, as may be required by the Government of India. First appointments are probationary for two years.

India Office.

Vacancies in the clerical establishment of the Secretary of State for India are filled from among the successful candidates at the General Examinations (Class I, and Second Division), which are held from time to time by the Civil Service Commissioners for appointments in the

Home Civil Service. The Examination for Class I. Clerkships is the same as the open Competitive Examination for the Civil Service of India. Further particulars may be obtained upon application to the Secretary, Civil Service Commission, Burlington Gardens, London, W.

Indian Public Works Department.

The Secretary of State for India in Council makes appointments of Assistant Engineers in the Public Works Department of the Government of India.

Candidates must have attained the age of 21, and not attained the age of 24 years.

Candidates must produce evidence that they have (1) obtained one of the University degrees mentioned in Appendix I., or (2) passed the A.M.I.C.E. examination, or (3) obtained such diploma or other distinction in Engineering as may, in the opinion of the Selection Committee, be accepted as approximately equivalent to the degrees mentioned.

The Engineer Establishment of the Indian Public Works Department consists of a staff of engineers, military and civil, engaged on the construction and maintenance of the various public works undertaken by the State in India.

2. The permanent establishment of the Department is recruited from the following sources:—

- (1) Officers of Royal Engineers.
- (2) Persons appointed to the Imperial Service by the Secretary of State by selection from the United Kingdom.
- (3) Persons educated at the Government Civil Engineering Colleges in India and appointed to the Provincial Services by the Government of India.
- (4) Occasional admission of other qualified persons,

The increments will be given for approved service only and in accordance with the rules of the Department.

Exchange compensation allowance will not be granted to future entrants.

Promotions above the grade of Executive Engineer are dependent on the occurrence of vacancies in the sanctioned establishment, and are made wholly by selection; mere seniority is considered to confer no claim to promotion.

State Railways.

The Secretary of State for India in Council will, from time to time as may be required, make appointments of Assistant Traffic Superintendent on Indian State Railways.

Candidates must possess one or other of the following qualifications, viz.:—

- (a) Not less than two years' practical experience of work in the Traffic Department of a British or Colonial Railway together with evidence of a sound general education.
- (b) A degree or diploma of any teaching University in the United Kingdom granted after not less than three years' study in that University, or a technical

3. The various ranks of the department are as follows:—

	Salary per annum (Imperial Service)
	Rs.
Chief Engineer, First Class	33,000
Second Class	30,000
Superintending Engineer, First Class ..	24,000
Second Class	21,000
Third Class	18,000
Executive Engineer, 20th year of service and following years	15,000
Executive Engineer, 19th year of service...	14,400
18th	13,800
17th	13,200
16th	12,600
15th	12,000
14th	11,400
13th	10,800
12th	10,200
11th	9,600
Assistant Engineer, 10th	9,000
9th	8,400
8th	7,920
7th	7,440
6th	6,960
5th	6,480
4th	6,000
3rd	5,520
2nd	5,040
1st	4,560

service only and in accordance with the rules of the Department.

Exchange compensation allowance will not be granted to future entrants.

Promotions above the grade of Executive Engineer are dependent on the occurrence of vacancies in the sanctioned establishment, and are made wholly by selection; mere seniority is considered to confer no claim to promotion.

State Railways.

diploma or certificate recognized by the Secretary of State.

The establishment of the Superior Traffic Department of Indian State Railways consists of a staff of officers, military and civil, engaged on the various railways administered by the State in India. This establishment is recruited from the following sources:—

- (i) Officers of Royal Engineers;
- (ii) Persons appointed by the Secretary of State by selection from the United Kingdom;
- (iii) Persons appointed in India.
- (iv) Occasional admission of other qualified persons,

The various ranks of the Department are as follows:—

	Salary per annum. Rs.
Traffic Managers	24,000
Deputy Traffic Managers	18,000
District Superintendents:—	
Class II., Grade 1	13,200
;; Grade 2	12,000
;; Grade 3	10,800
;; Grade 4	9,600
;; Grade 5	8,400
Assistant Superintendents:—	
Class III., Grade 1	6,600
;; Grade 2	5,400
;; Grade 3	4,800
;; Grade 4	3,600
;; Grade 5	2,400-3,000

The establishments of the Superior Locomotive and Carriage and Wagons Departments of Indian State Railways consist of officers engaged on the various railways administered by the State in India. These establishments are recruited from the following sources:—

- (i) Persons appointed by the Secretary of State by selection from the United Kingdom;
- (ii) Persons appointed in India;
- (iii) Occasional admission of other qualified persons.

The various ranks of the Departments are as follows:—

	Salary per annum Rs.
Locomotive Superintendents	24,000
Deputy Locomotive Superintendent	18,000
Carriage and Wagon Superintendents	18,000 or 21,000
Deputy Carriage and Wagon Superintendents	15,000
District Superintendents:—	
Class II., Grade 1	13,200
;; Grade 2	12,000
;; Grade 3	10,800
;; Grade 4	9,600
;; Grade 5	8,400
Assistant Superintendents:—	
Class III., Grade 1	6,600
;; Grade 2	5,400
;; Grade 3	4,800
;; Grade 4	3,600
;; Grade 5	2,400-3,000

Telegraph Department.

There are not at present any vacancies in the Superior Establishment of the Indian Telegraph Department, and it is considered unnecessary for the present to recruit any Assistant Superintendents from the United Kingdom. The arrangements for the future recruiting of

the Department have not been finally settled. The various ranks of the superior establishment are as follows:—

	Maximum Salary per mensem Rs.
Director-General	3,000
Deputy Director-General	2,000
Directors	1,800
Deputy Directors	1,600
Chief Superintendents, 1st Class	1,400
Chief Superintendents, 2nd class	1,250
Superintendents, 1st Grade	1,000
;; 2nd Grade	850
Assistant Superintendents, 1st Grade.. .. .	700
;; " 2nd Grade	550
;; " 3rd Grade	450
;; " 4th Grade	350

His Majesty's Indian Army.

A certain number of appointments to the Indian Army are offered to Cadets of the Royal Military College, and a certain number to candidates from the Universities. All King's Cadets (British and Indian) and Honorary King's Cadets nominated by the Secretary of State for India in Council have the option, during their last term at the Royal Military College, of electing for appointment to the Unattached List for the Indian Army, or for appointment to commissions in British Cavalry or Infantry. The appointments to the Unattached List for the Indian Army remaining after the claims of the King's Cadets and Honorary King's Cadets (Indian) have been satisfied are allotted in order of merit to Cadets who satisfy the requirements of the Regulations respecting admission to the Royal Military College, and who elect to compete for such appointments, at each final Examination at Sandhurst.

King's India Cadetships.

Twenty King's India Cadets are nominated each half-year from among the sons of persons who have served in India in the Military or Civil Service of His Majesty or of the East India Company. A Candidate is not eligible for nomination as a King's India Cadet if he be under 17 or over 19½.

A candidate is not eligible for nomination, and his claims will in no circumstances be considered until he (a) has qualified at the Army Entrance Examination; or (b) is prepared to attend the next examination. The fees of King's India Cadets at the Royal Military College are not payable by the State, except in cases where, after due inquiry, their pecuniary circumstances are ascertained to be such as to justify the payment.

Honorary King's India Cadetships.

Three Honorary King's India Cadets are nominated annually by the Secretary of State for India. Such Cadets are appointed from—

- (a) The sons of officers of the Indian Army; who were killed in action, or who have died of wounds received in action within six

months of such wounds having been received, or from illness brought on by fatigue, privation or exposure, incident to active operations in the field before an enemy, within six months after their having been first certified to be ill.

(b) The sons of officers of the Indian Army, who have obtained the brevet substantive rank of Major or Lieutenant-Colonel, and have performed long or distinguished service.

An Honorary King's Cadetship carries with it no pecuniary advantage.

Queen Alexandra's Military Nursing Service for India.

The Nursing establishment is for duty with British officers and soldiers, and at present consists of:—

- 4 Lady Superintendents.
- 16 Senior Nursing Sisters.
- 71 Nursing Sisters.

The numbers in these grades are subject to alteration.

Nursing Sisters at the time of appointment must be over 27 and under 32 years of age. Candidates for the Service must have had at least three years' preliminary training and service combined in the wards of a British general hospital or hospitals of not less than 100 beds in which adult male patients receive medical and surgical treatment, and in which a staff of Nursing Sisters is maintained.

The duration of a term of service, for all grades of lady nurses, is five years. A lady nurse who has been pronounced by a medical Board to be physically fit for further service in India, may be permitted to re-engage for a second and third term at the option of the Government, and again for a fourth term, or until the age of compulsory retirement, if in all respects efficient and if specially recommended by the Commander-in-Chief in India. But a lady nurse will not under any circumstances be permitted to remain in the service in the grade of Lady Superintendent beyond the age of 55 years, or in either of the other grades beyond the age of 50 years.

Rates of Pay.

(In addition to free quarters, fuel, light, and punkah-pullers.)

	Rs.	per mensem.
Lady Superintendent ..	300	..
Senior Nursing Sister over five years in grade ..	225	..
Senior Nursing Sister under five years in grade ..	200	..
Nursing Sister over five years in grade ..	200	..
Nursing Sister under five years in grade ..	175	..

Royal Indian Marine.

All first appointments of executive officers in the Royal Indian Marine are made by the Secretary of State for India,

The limits of age for appointment to the junior executive rank, that of Sub-Lieutenant, are 17 and 22 years, and no candidate will be appointed who does not possess the full ordinary Board of Trade certificate of a Second Mate; certificates for foreign-going steamships will not be accepted.

PAY AND ALLOWANCES.

The present establishment of officers of the Royal Indian Marine and their allowances are as follows:—

	Grade pay.	Per mensem	
		Rs.	
33	Nine Captains ..	600	
	Eleven Commanders ..	500	
	The remainder (thirteen) ..	400	
72	Lieutenants of 14 Years' seniority (Lieut.-Commanders of 6 years' seniority) ..	375	
	Lieutenants of 12 years' seniority (Lieut. Commanders of 4 years' seniority) ..	350	
	Lieutenant of 10 years' seniority (Lieut.-Commanders of 2 years' seniority) ..	325	
	Lieutenants of 8 years' seniority (Lieut. Commanders) ..	300	
	Lieutenants of 6 years' seniority ..	275	
	Lieutenants of 4 years' seniority ..	250	
	Lieutenants under 4 years' seniority ..	200	
	Sub-Lieutenants, joining with 1st Mate's Certificate ..	150	
	Sub-Lieutenants, joining with 2nd Mate's certificate ..	135	
	Cadets, without certificate ..	125	
	Total 105		

In addition, 3 Commanders and 8 Lieutenants are at present employed in the Marine Survey of India.

A certain number of Shore, Port, and Marine Survey appointments are usually reserved for officers of the Royal Indian Marine. The numbers so reserved and the allowances attached (in addition to pay of grade), are as follows:—

	Allowances per mensem.
	Rs.
4 Shore appointments ..	400—1000
16 Port appointments ..	320—870 per diem.
11 Marine Survey appointments ..	4—20

The sanctioned establishment of the Engineers' branch of the Marine numbers 82, of whom at present, 10 are Chief Engineers, and the remainder Engineers and Assistant Engineers.

STERLING EQUIVALENTS.

N.B.—In calculating the sterling equivalents of rupee salaries drawn by Europeans appointed in England to permanent service in India, it is necessary to bear in mind that in some cases Exchange Compensation Allowance is drawn in addition to salary. This allowance is at present at the rate of $\frac{1}{4}$ per cent. on the salary, subject to a maximum of Rs. 138-14-3 a month; but the rate is subject to alteration in the event of any material variation in the average rate of exchange between England and India.

The following table shows the approximate equivalent in sterling of the rupee Salaries stated, (a) when Exchange Compensation Allowance is not granted, (b) when it is granted at the rate just mentioned:—

Rupees per Mensem	Rupees per Annum.	Equivalent without E. C. A.	Equivalent with E. C. A.	Rupees per Mensem.	Rupees per Annum.	Equivalent without E. C. A.	Equivalent with E. C. A.	Rupees per Mensem.	Rupees per Annum.	Equivalent without E. C. A.	Equivalent with E. C. A.

The Indian Civil Service.

In the early years of the eighteenth century the East India Company was still little more than a body of traders. The genesis of the Indian Civil Service is to be sought in the modifications which the Company underwent as it found itself year by year more involved in the government of the country with which it was trading. It was gradually realised that neither the pay nor the training of the Writers, Factors and Merchants of the Company was adequate to the administrative work which they were called on to perform. As a result this work was often indifferently done, and corruption was rife. To Lord Cornwallis is due the credit of having reorganized the administrative branch of the Company's service, in accordance with **three main principles** from which there has been hitherto no deviation. These were that every civil servant should covenant neither to engage in trade nor to receive presents, that the Company on their side should provide salaries sufficiently handsome to remove the temptation to supplement them by illegitimate means, and that, in order that the best men might be attracted the principal administrative posts under the Council should be reserved for members of the Covenanted Civil Service as it was called. The first of these principles is embodied not only in the covenant which every member of the service still has to sign on appointment, but also in the "Government Servants' Conduct Rules," which are applicable to every civil department, however recruited. As regards the second, the scale of salaries originally prescribed was so handsome that it has not yet been considered expedient to undertake any general revision of it. The list of reserved posts remains, too much the same as in 1793, though certain modifications have been introduced to meet Indian aspirations.

At first nominations to the service were made by the Directors, but this right was withdrawn by Act of Parliament in 1853, and since 1855 **appointments** have been open to public competition, all natural-born subjects of the Crown being eligible. The age-limits and other conditions of examination have varied considerably from time to time, but at present candidates are examined between the ages of 22 and 24. At first young officers were sent straight to their appointments on recruitment, but in 1800 Lord Wellesley established a college at Fort William for their preliminary training. This was not a success and in 1805 a college at Haileybury was substituted, and for 53 years nominees underwent a two years' training there before proceeding to India. At present a year's course at a British University is prescribed, and at the close of this year there is a further examination. Failure to pass this means final loss of appointment, and seniority in the service is determined by combining the result of the open competition and this final compulsory examination.

The Statute of 1793 (33 Geo. cap. 52) modified in 1861, sets forth the list of **offices reserved** for members of the Indian Civil Service. It includes among others the offices of secretaries and under-secretaries to governments, commissioners of revenue, Civil and Sessions Judges, Magistrates and Collectors* of Districts (in the regulation provinces) and joint and assistant Magistrates and Collectors. In the non-regulation provinces, many of the above posts are held by military officers. In addition to these reserved posts there are many other appointments which the Indian Civilian can hold. He is now, however, debarred from permanent appointment as Governor-General or Governor, the highest office he can attain being those of Lieutenant-Governor and Member of the Viceroy's Council.

Despite the complete eligibility of **natives of India**, and despite the numbers of Indian who now seek their education in England, comparatively few have succeeded in obtaining appointments by open competition. On the 1st of April 1913 only 46 of the 1,319 civilians on the cadre were natives of India. In 1870 an important Act (33 Vict. cap. 33) was added to the statute-book which allowed the appointment of "natives of India of proved merit and ability" to any of the offices reserved by law to members of the Covenanted Civil Service, such officers were known as Statutory or Uncovenanted Civilians. This method of appointment was dropped in 1889, and facilities were afforded to Indians for promotion through the ranks of the Provincial Service.

The young civilian, on joining his appointment in India, is attached to a district as **assistant to the Collector**. He is given limited magisterial powers, and after passing examinations in the vernacular and in departmental matters he attains to full magisterial powers and holds charge of a revenue subdivision. During this period he is liable to be selected for the judicial branch and become an Assistant Judge. In course of time promotion occurs and he becomes either Collector and District Magistrate, or District and Sessions Judge: this promotion does not generally occur before he has served for at least ten years. The District Judge is the principal civil tribunal of the district and wields extensive appellate powers. In his capacity as Sessions Judge he tries the more important criminal cases of the district.

The **Collector** is not merely chief magistrate and revenue officer of his district. He also forms a court of appeal from subordinate magistrates, supervises municipalities and local boards, is chief excise officer and district registrar, and in general represents Government in the eyes of the people. The Collector and his assistants are expected to travel over their

* The Chief Revenue Officer of a District is known as the Collector in the "regulation provinces" of Bengal, Madras, Bombay, Agra Deputy Commissioner, and his assistants are

known as the Collector in the "regulation and Behar and Orissa. Elsewhere he is the Assistant Commissioners.

charges; touring rules vary in different provinces, but in Bombay the Collector spends four and his assistants seven months in the year on tour.

By the time the highest grades in the offices of Collector or Judge are reached the Civilian has, as a rule, nearly completed the 25 years which are necessary before he can retire. Should he elect to continue in service, there are still posts to which he can look forward for promotion. On the one hand, he may become a Commissioner or even a Member of Council, and on the other, there are Judicial Commissionerships and seats on High Court Benches. Such is the normal career of a Civilian, but this, by no means, completes the account of his prospects, for nearly one-fourth of the service is, as a rule, employed in posts—some reserved and some not—out of the regular line. A number of Civilians are employed in the Imperial and Provincial Secretariats, some are in political employ in the Native States, others hold responsible positions in the Customs, Police, Salt, Post Office and other departments, or supervise big municipalities and public trusts.

The Civilian may retire after 25 years' service and in the ordinary way must retire on reaching the age of 55. He contributes throughout his service to a pension which is fixed, regardless of whether he has risen to be a Lieutenant-Governor, or has remained at the foot of the ladder. Every Civilian, moreover, married or single, subscribes to an annuity fund which provides for the widows and orphans of deceased members of the service.

Public Services Commission.

In July, 1912, it was announced that the King had been pleased to approve the appointment of a Royal Commission to examine and report upon the Public Services in India. The Royal Commission was constituted as follows:—

Chairman.—The Right Hon. Lord Islington, K.C.M.G.

The Earl of Ronaldshay, M.P.

Sir Murray Hammick, K.C.S.I., C.I.E., Indian Civil Service.

Sir Theodore Morison, K.C.I.E., Member of the Council of India.

Sir Valentine Chirol.

Frank George Sly, Esq., C.S.I., Indian Civil Service.

Mahadev Bhaskar Chaubal, Esq., C.S.I., Member of the Governor of Bombay's Executive Council.

Gopal Krishna Gokhale, Esq., C.I.E., Member of the Viceroy's Legislative Council.

Walter Culley Madge, Esq., C.I.E., Member of the Viceroy's Legislative Council.

Abdur Rahim, Esq., Judge of the Madras High Court.

James Ramsay MacDonald, Esq., M.P.

Herbert Albert Laurens Fisher, Esq., Fellow and Tutor of New College, Oxford.

The Terms of Reference were as follows:—

To examine and report upon the following matters in connexion with the Indian Civil Service, and other civil services, Imperial and Provincial:—

- (1) The methods of recruitment and the systems of training and probation;
- (2) The conditions of service, salary, leave; and pension.
- (3) Such limitations as still exist in the employment of non-Europeans and the working of the existing system of division of services into Imperial and Provincial;

and generally to consider the requirements of the Public Service, and to recommend such changes as may seem expedient.

Work of the Commission.—The Royal Commission visited India in the cold weather of 1912-13, and toured extensively in India, including Burma, confining their attention mostly to hearing the evidence of and relating to the Indian Civil Service. They subsequently sat in London and in October, 1913, again left for India to enquire into 28 Services other than the Indian Civil and the Provincial Services. They assembled first at Delhi on November 3rd, and examined Imperial officers and witnesses from the United Provinces, the Punjab and the North-West Frontier Province. They then assembled at Calcutta in the middle of December, to hear witnesses from Bengal, Bihar and Orissa, and Burma.

Early in February the Royal Commission went to Madras, and completed the tour at Bombay, where witnesses from Western India and the Central Provinces were heard.

The Commission returned to England in the spring of 1914, and drew up a report of which publication was delayed on account of the war, until January, 1917. This report is a large blue book of 529 pages. The actual report of the Commissioners, with their recommendations, runs to 65 pages, but the annexures covering the various departments occupy 300 pages. Special minutes relating to the report by members who sign it take up 22 pages, while a long minute, which really constitutes a separate report, by Mr. Abdur Rabim, of the Madras High Court, who regrets he has been unable to agree in the tenor of report or accept the more important of the conclusions of the commissioners, runs to no fewer than 94 pages.

Conclusions.—The Commission at the end of their report thus sum up their conclusions:—

At the end of the various annexures to our report we have summarised in detail the recommendations which we have made with regard to each service. The proposals we have put forward for increased expenditure have been framed without regard to the prior claims of the present war on the resources of the country, and may need to be given effect to gradually. Otherwise we have taken into account the existing situation. The main conclusions to which we have come are as follows:—

- (i) Where it is necessary to organise the public services into higher and lower branches,

this should be arranged on the basis of the work which they are required to do, and not, as is now in some instances the case, of the race of, or the salaries drawn by, their members, or any such artificial distinction (paragraphs 24 to 26).

(ii) Officers promoted from a lower into a higher service should ordinarily be given the same opportunities as officers who have been directly recruited and should be eligible on their merits for appointment to any post in their service. Both classes of officers should be shown on the same list and should take seniority amongst themselves from their date of entry on the list. Except in the case of the Indian civil service all promoted officers should also be made full members of the service into which they are promoted (paragraph 27).

(iii) The practice of employing military officers on civil duties should be continued in the medical, public works, railway, and survey of India departments, and subject to the conditions stated Military officers should also be eligible for appointment to the mint department. Elsewhere the practice of recruiting them should be allowed to die out, but this should take place gradually in the case of the civil service in Burma (paragraph 28).

(iv) The practice of employing members of the Indian civil service in other departments should be continued in the post office, and in the Northern India salt revenue, Indian finance and customs departments. Such officers should also continue to supervise the work of the land records (Burma), registration, salt and excise, and survey (Madras) departments. They should no longer be appointed directors of agriculture but rural commissionerships should be created and be manned from their ranks. The Inspector-generalships of police should no more be recruited for in the Indian civil service, but Indian civil servants, should continue to be eligible for these appointments subject to the claims of qualified police officers (paragraph 29).

(v) The services which lie between the higher and the subordinate services should no longer be designated "provincial" Services. If they are organised provincially they should ordinarily bear the name of their province; for example, the Madras civil service, the Bombay police service, and so on. If they are under the Government of India the terms class I and class II should be used for the two services. These terms should also be used in the education department (paragraph 30).

(vi) The services for which recruitment is now made normally in India should continue to be recruited for in that country. The Indian finance department should be added to this category. The military finance department should be similarly treated, if there are no military considerations to the contrary. Eventually, similar action should be taken with the customs department, but for the present some recruitment in Europe for this department should be permitted. The remaining services for which recruitment is now made wholly in Europe, or partly in Europe and partly in India, should be divided into three main groups. In the first should be placed the Indian civil service and the police department, in which it should be recognised that a preponderating proportion of

the officers should be recruited in Europe. In the second should come services like the education, medical, public works and so on, in which there are grounds of policy for continuing to have in the personnel an admixture of both western and eastern elements. For these services arrangements should be made for recruitment in both countries. In the third should be placed certain scientific and technical services, such as the agricultural and civil veterinary departments, etc., for the normal requirements of which it should be the aim to recruit eventually in India. To this end educational institutions should be developed in India on a level with those now existing in Europe so as to produce the necessary supply of candidates (paragraphs 31 and 32).

(vii) No system of state scholarships will provide a suitable method for increasing the number of non-Europeans in the public services (paragraph 35).

(viii) In certain services arrangements should be made for the appointment of a minimum number of Indians, but this should not be made a general practice for fear that the minimum may come to be regarded as a maximum (paragraph 35).

(ix) To secure an increase in the number of non-Europeans employed, so far as this is not obtained automatically by the proposals made with regard to organization and the place of appointment, different methods should be followed in different services, as detailed in the annexures. Speaking generally, technical institutions in India should be created or expanded; provision should be made for advertising vacancies; Indian members should be appointed to serve on the committees which will advise on the selection of recruits; and, finally, the statistics relating to the employment of members of the various communities should be published every ten years (paragraph 36).

(x) The question of the extent to which the services should be manned by the direct recruitment of untried officers and by the promotion of experienced officers from an inferior service should be settled separately for each service, as explained in the various annexures. But in every case opportunities should be created for young men, and direct recruitment should be encouraged wherever possible (paragraph 37).

(xi) In the present conditions of India no general system of competitive examinations as a means of entry to the public services is suitable, but where such a method exists it should ordinarily be maintained (paragraph 42).

(xii) When nominating direct recruits for admission to the services the authorities in India should act with the advice of committees which should not be purely departmental in character, but should contain persons in touch with educational institutions, and should also have a non-official and an Indian element. Publicity should be given to all vacancies, and applicants should be forbidden to bring outside pressure to bear on individual members of the committees. A similar procedure should be followed in England. Candidates for services recruited in India should ordinarily possess minimum educational qualification. This need not be identical for all candidates, but the standard for all should be the same (paragraph 44).

(xiii) In recruiting specialists care should be taken to draw upon the widest possible field (paragraph 45).

(xiv) Arrangements can best be made for communal representation in India by the exercise of the powers of Government under the system of nomination proposed. No hard and fast rule or proportion is suitable (paragraph 46).

(xv) Except where otherwise provided, direct recruits should be on probation for two years. A probationary course in England should be given only to recruits for the Indian civil and forest services, and in the latter only for so long as recruits are taken from Europe. As the schools of forestry of the United Kingdom are developed, recruits from Europe should be taken from them (paragraph 47).

(xvi) The question of training requires to be considered for each service separately, as explained in the various annexures. Inter-provincial conferences of officers responsible for the training of recruits should be encouraged (paragraph 48).

(xvii) In fixing the salaries of their employes, Government should pay so much and so much only as is necessary to obtain recruits of the right stamp, and to maintain them in such a degree of comfort and dignity as will shield them from temptation and keep them efficient for the term of their service (paragraph 49).

(xviii) Except where otherwise expressly provided, officers should be remunerated by an incremental scale of salaries on the compartment system. Where this is done the rules with regard to acting allowances should be revised (paragraphs 50 and 51).

(xix) Exchange compensation allowance should no longer be paid, but generally speaking the amounts now drawn on this account should be added to the salaries of officers (paragraph 52).

(xx) The salaries to be paid to Europeans and statutory natives of India respectively should be settled for each service separately and ordinarily in accordance with the principle set out in item xvii above, and not on any general consideration of race or place of recruitment. In services in which different rates are found to be suitable they should be fixed on the merits of each case, and no proportion should be laid down generally as between the amounts payable to the two classes of officers. In services the normal requirements of which will eventually be met in India, the standard scale of salaries should be that considered suitable for statutory natives of India, and special rates should be fixed for Europeans for so long as they are recruited. In certain services in which equality of pay has long been an established practice this should be maintained. In other services officers should be brought to an equality in the administrative ranks, and earlier in the education department. As a special case statutory natives of India recruited in Europe should be paid as Europeans (paragraphs 53 to 57).

(xxi) The salaries to be paid to officers should be as stated in the various annexures. For recruits in India from the ordinary graduate class, or their equivalent amongst members of the domiciled community, a general scale rising

from Rs. 250 to Rs. 500 a month should be introduced. Beyond this there should be selection scales of posts suitable to the circumstance of each service. For services requiring higher initial qualifications higher rates should be adopted (paragraph 58).

(xxii) The necessary steps should be taken to keep the cadres of the services up to a strength sufficient to cope with the work to be done (paragraph 61).

(xxiii) The calculations in accordance with which recruitment is made should be worked out with greater precision, and should be revised periodically with due regard to the requirements of leave and training. More precision is needed in fixing the annual rate of recruitment, and service tables should be prepared and kept up to date for each service or group of services. Distribution lists should be maintained for all services, which are recruited on a system, to show by groups of years the theoretical and actual number of officers present. Excesses or defects should be dealt with at the point where they occur. If in spite of these measures blocks in promotion are experienced, special allowances should be given on the merits of each case (paragraphs 61 to 65).

(xxiv) An expert committee should be appointed to simplify the present travelling allowance rules, to consider their sufficiency for everyday purposes, and to revise the classification of officers. Immediate measures should be taken to reimburse officers for all reasonable charges incurred by them on transfer from one station to another, whether personal to themselves or on behalf of their families and household establishments (paragraphs 66 to 68).

(xxv) The rules as to house allowance should be revised on the lines indicated (paragraph 69).

(xxvi) A Burma allowance should be given on the terms stated (paragraph 70).

(xxvii) Free passages should be given to officers of the services specified (paragraph 71).

(xxviii) Inefficient officer should be compulsorily retired (paragraph 72).

(xxix) Officers who are subject to the operation of article 459 of the civil service regulations should be retired at the age of 55, unless Government, in their sole discretion, decide to grant an extension of service (paragraph 73).

(xxx) There should be separate European service and Indian service leave rules to regulate the taking of long leave. Speaking generally, officers recruited under European conditions of salary should be subject to the European, and others to the Indian service leave rules (paragraphs 77 and 78).

(xxxi) The European service leave rules should be simplified, and greater facilities for leave on higher pay should be given by allowing privilege leave to be accumulated up to four months and furlough to be commuted subject to the restrictions stated (paragraphs 79 and 80).

(xxxii) The sterling amounts of the allowances payable under the European service

leave rules should stand to the rupee amounts in the proportion of 18 to 16 (paragraph 81).

(xxxiii) The Indian service leave rules should be simplified; officers subject to them should be allowed to accumulate privilege leave up to four months, and the allowances permissible should be increased to the extent stated (paragraphs 82 and 83).

(xxxiv) The rules relating to study leave should be revised; the arrangements for deputing officers to study particular problems should be made more elastic, and facilities should be given to officers on leave to study voluntarily such problems as interest them (paragraphs 84 to 86).

(xxxv) With the exceptions specified all officers should be under the same pension rules; all should serve normally for thirty years, but those recruited after the age of twenty-five in the services noted should be granted the concessions indicated, and all should be able to retire optionally on a reduced pension after twenty-five years' service. Government should be able to retire any officer after this period (paragraphs 87 to 91).

(xxxvi) The maximum limits of pension should be increased on the conditions stated and special additional pensions of amount stated should be drawn by the officers noted (paragraphs 92 and 93).

(xxxvii) A scheme for a general family pension fund, or for separate funds for different classes of officers, should be worked out on a self-supporting basis (paragraph 96).

Temporary Provisions.

At the beginning of the war a large number of undergraduates who had intended to compete for the Indian Civil Service abandoned their design in order to join His Majesty's Forces. Owing to the consequent dearth of suitable candidates at the open competition, and with the object of not penalising for their patriotism men who had joined the Army, the Secretary of State decided in 1915 to reduce the number of places to be filled by competition, and introduced a Bill into Parliament to provide for appointment to the service, during the continuance of the war and for a period of two years thereafter, otherwise than by the examination held in London in accordance with the regulations made under section 32 of the Statute of 1858 and section 97 of the Government of India Act, 1915. This Bill was passed as the Indian Civil Service (Temporary Provisions) Act, 1915. Provision was made in it for filling by nomination a maximum of three-fourths of the total number of vacancies to be filled during the period for which the Act remained in force. Further, in order to safeguard the interests of Indian candidates who might normally have expected to secure appointments if the number of vacancies offered for competition had not been reduced, the Secretary of State decided

that if in any year the number of Indians successful at the open competition was less than the average number of Indians who had secured appointment: at the competitive examinations of the preceding ten years, the deficiency should be made up by the nomination of suitable Indian candidates who had appeared but been unsuccessful at the examinations of 1915 and later years.

The number of vacancies which have accumulated since 1915 is 155 and it is expected that the number for the two years 1919 and 1920 will be about 100. In other words there will be a total shortage of about 255 officers by 1920. After the cessation of hostilities the Secretary of State, under the powers vested in him by the Temporary Provisions Act of 1915, framed regulations for the nomination of candidates who have served during the war in His Majesty's Navy, Army or Air Forces. These regulations include the following:—

“ Every candidate for appointment to be made under these rules must have served in His Majesty's Naval, Military, or Air Forces during the war for at least one year, or, if his service be less than one year, have been retired or discharged on account of wounds or sickness resulting from such service.”

“ Every candidate must have been born on or after the 2nd August 1891, and on or before the 1st August 1899.

“ Every candidate must have received continuous and systematic education of high type until at least the age of 18, and must produce satisfactory evidence that if he has not received University education, he would have been justified in proceeding from school to a University with a view to taking high honours.

Nomination of Indians.—When introducing the Bill which became the Temporary Provisions Act of 1915, Mr. Chamberlain stated in Parliament that, while it was proposed to maintain by nomination the proportion of Indians who secured appointments, it was not the intention to increase their number by this method. In view, however, of the Report on Constitutional Reforms, and as an earnest of Government's intentions in the direction of Indianising the services, the Secretary of State has under consideration the question of inviting Parliament to allow him to nominate about 40 more Indians under the Act. About 35 vacancies are expected to be filled by the open competitions of 1919 and 1920 and the residue, approximately 180, will be filled by nomination under the regulations reproduced in paragraph 2 above. Three qualifying examinations have been held already in London and one each in Edinburgh and Dublin. It is proposed to hold another at these centres and also in India and other oversea centres in October 1919.

THE INDIAN MEDICAL SERVICE.

The Medical Service under the control of the Government of India consists of some 803 medical men recruited in England by competitive examination; and has as its primary duty the care of the native troops and of the British Officers and their families, attached to them.

But in the course of rather more than a century and a half other duties and responsibilities have accrued to it, so that there are in addition the provision of medical aid to Civil Servants and their families, the administration of the civil hospitals of the large towns, and

the supervision of the numerous small dispensaries provided either by the Government or private charity for the inhabitants of the larger villages. Moreover, the Service provides for the sanitary control of large areas, dealing with the sanitation of towns, protection of water supplies and the prevention of epidemic disease. It is also represented in the Native States by the Residency Surgeon, and in Persia by the Medical Officers to the British Consulates. The Jail Department is also administered in great part by Indian Medical Officers, generally in the dual capacity of Medical Officer and Superintendent; and up to quite recently the Officers in the Mints have been recruited from members of the medical profession. Lastly, the Service provides the men who are engaged in original research on diseases of tropical importance at the Bacteriological Laboratories which have arisen in India during the last fifteen years, and others who as Professors at the large medical schools have had the task of creating an indigenous medical profession which will make permanent throughout the Indian Empire the civilising influence of Western Medicine.

This remarkable combination of duties and responsibilities in a single Service has slowly evolved from the system, initiated in quite early days by the old East India Company, of providing "Chirurgeons" from England, on the nomination of the Board of Directors in London, for the care of the people and soldiers in the Indian "Factories," and on the ships trading with the East. Besides these men the Company maintained several medical services, including those of St. Helena, the West Coast of Sumatra, Prince of Wales Island, and the China Coast. The Surgeons on the Company's Indiamen were frequently utilised for emergent work in India, as in the case of the Mahratta War of 1780 and other military operations of that time, for duty with troops, and sometimes to fill vacancies occurring among those who would now be styled "civil surgeons."

Organisation.—The Indian Medical Service practically dates from the year 1764 when the scattered medical officers serving in India were united into one body; later, this was divided into the three medical "Establishments" of Bengal, Madras, and Bombay. In 1766, the Medical Service was divided into two branches, military and civil, the latter being regarded as primarily army medical officers, lent temporarily for civil duties, in which they formed a reserve for the Indian Army, and were consequently liable to recall at any time. This position was confirmed by the Council of Lord Cornwallis in 1788; and has been in existence ever since with great advantage to the military authorities in times of military stress. In 1898, the officers of the Service were given military rank, and since 1906 all the names have been borne on one list, though men on entering the service are allowed to elect a Presidency in which they will serve on entering the Civil Department.

The Service was thrown open to Indians by the India Act of 1853, the first competitive examination being held in January 1855, when

the list was headed by a Bengalee student who subsequently attained distinction. It was calculated by Lt.-Col. Crawford, I.M.S.; (the talented historian of the Service) that from January 1855 to the end of 1910, eighty-nine men of pure Indian extraction had entered the Service. The proportion now shows signs of yearly increase. The total number of Indians at present in the Service is a little more than five per cent. of the whole: while, of the successful candidates during the past five years, 17.6 per cent. have been men born and bred in the country.

Method of Entry.—Entrance into the Service before 1914 was determined on the results of competitive examinations held twice a year in London, the Regulations regarding which, and the rates of pay, rules for promotion and pension relating thereto, may be obtained on application to the Military Secretary at the India Office. Candidates must be natural-born subjects of His Majesty, of European or East Indian descent, of sound bodily health, and, in the opinion of the Secretary of State for India in Council, in all respects suitable to hold commissions in the Indian Medical Service. They may be married or unmarried. They must possess, under the Medical Acts in force at the time of their appointment, a qualification registrable in Great Britain and Ireland. No candidate will be permitted to compete more than three times. Candidates for the January examination in each year must be between 21 and 28 years of age on the 1st February in that year, and candidates for the July examination must be between 21 and 28 years of age on the 1st August.

The candidate is examined by the Examining Board in the following subjects, and the highest number of marks obtainable will be distributed as follows:—

- | | |
|---|--------------|
| (1) Medicine, including Therapeutics | 1,200 Marks. |
| (2) Surgery, including diseases of the eye | 1,200 " |
| (3) Applied Anatomy and Physiology | 600 " |
| (4) Pathology and Bacteriology | 900 " |
| (5) Midwifery and Diseases of Women and Children .. | 600 " |
| (6) Materia Medica; Pharmacology and Toxicology .. | 600 ;; |

N.B.—The Examination in Medicine and Surgery will be in part practical, and will include operations on the dead body, the application of surgical apparatus, and the examination of medical and surgical patients at the bedside.

Having gained a place at the entrance examination, the successful candidates will be commissioned as Lieutenants on probation, and will be granted about a month's leave. They will then be required to attend two successive

courses of two months each at the Royal Army Medical College, and at Aldershot respectively.

Officers appointed to the Indian Medical Service will be placed on one list, their position on it being determined by the combined results of the preliminary and final examinations. They will be liable for military employment in any part of India, but with a view to future transfers to civil employment, they will stand posted to one of the following civil areas:—(1) Madras and Burma; (2) Bombay, with Aden; (3) Upper Provinces, *i.e.*, United Provinces, Punjab and Central Provinces; (4) Lower Provinces, *i.e.*, Bengal, Bihar and Orissa and Assam.

The allocation of officers to these areas of employment will be determined upon a consideration of all the circumstances, including as far as possible the candidate's own wishes.

The whole course lasts for four months, after which the duly gazetted Lieutenants proceed to India, and prior to December 1918 were attached to Indian regiments. In December 1918 Station Hospitals for Indian Troops were instituted, a much needed reform which has been under consideration for a number of years. Indian Medical service officers are now attached to these hospitals for duty, and for the first years of their service are attached to native regiments in any part of the country. The doctor is an officer of the regiment, as was the case in the old days of the Army Medical Department. Of late years it has been proposed to form the members of the Service into a corps on the lines of the British Medical Service, by forming station hospitals for native troops, thereby releasing the doctor from regimental life. This reform appears to have fallen through for the present, but is likely to be brought into operation within a very few years.

Organisation.—The Head of the Service is the Director General, who is an official of the Government of India and its adviser on medical matters. He is also concerned with questions of promotion of officers to administrative rank, and of the selection of men for admission to the civil department. Attached to his office and under his general supervision is the Sanitary Commissioner with the Government of India. In each Presidency or Province there is a local head of the civil medical service and medical adviser of the local administration, who is either a Surgeon General, or an Inspector of Civil Hospitals of the rank of Colonel. The medical service in each province consists of the Sanitary Branch and the purely professional. The former is composed of Sanitary Commissioners of Districts, who by keeping large tracts of country under observation are in a position to advise their respective governments of the existence of epidemics, and on the proper methods of dealing with them and of preventing their spread. It is, however, through the Civil Surgeon that the visitor to India will come in contact with the Service. This official is something more than a general practitioner, as he is expected to be the leading medical and surgical authority in a large district consisting of a million or more of souls. Owing to the varied experience obtained in India by

the members of the Civil Medical Department, this official is generally a man of the highest professional attainments, especially so in the case of those senior men holding appointments in the larger towns. His duties are to give medical aid to the civil servants and treat families, and to administer the hospital which has been provided by Government in each headquarter town. In many cases too he will have the additional charge of the local jail, and be the Sanitary Adviser of the Municipality. Accustomed to meet the most serious emergencies of his profession, and to rely entirely on his own skill and judgment, the Civil Surgeon in India has given to the Indian Medical Service a reputation for professional efficiency which cannot be excelled by any other public medical service. Travellers in India falling sick within call of any of the larger towns can therefore rely on obtaining the highest professional skill in the shape of the ordinary Civil Surgeon of the I. M. S. During the last few years the service has not been popular amongst graduates of the Medical Schools of the United Kingdom and a variety of disturbing factors have contributed towards this unpopularity. These have now been dealt with or are under consideration, and with the increased rates of pay which have been sanctioned the grant of better concessions in the matter of study, leave and facilities for research, etc. It is hoped that the service will soon regain its former popularity, and that it will attract men of the highest attainments. The Secretary of State for India has realised the necessity for an Indian Medical Service of the highest possible efficiency and has stated that he considered the I. M. S. the pivotal service of all services in India.

A Parliamentary Paper containing correspondence between the Government of India and the Secretary of State, on the promotion of an independent medical profession in India and the possibility of limiting or reducing the cadre of the Indian Medical Service, was published during 1914. Writing in 1910, the Government of India said that it was impracticable to make any reduction in the number of Indian Medical Service officers employed solely on civil duties, that is to say, those not belonging to the war reserve. An independent profession trained on western lines was growing up in India but had to overcome its universal rival in the shape of *hakims* and others trained in indigenous methods: Government could do much to encourage the growth of this profession by making provision for the registration of medical practitioners qualified according to western methods. The Secretary of State, replying in November 1912, said that he was unable to contemplate any substantial reduction in the Indian Medical Service. As for the independent profession, he trusted that the experience of the working of the Bombay Registration Act might justify the introduction of similar legislation for other Provinces. He considered that the Indian Medical Service should be restricted to the military needs of the country both on account of economy and in order to increase as far as possible the number of important posts held by Indians; he was prepared to consider each new appointment on its merits, but any proposal for an

increase in the civil posts included in the cadre of the Indian Medical Service would be subjected to the closest scrutiny. In reply to that despatch, the Government of India wrote in March, 1914:—"In view of the growing medical needs of the country which necessitate the employment of a larger staff of medical officers, some expansion of the Indian Medical Service is inevitable, and such expansion should not, in our opinion, be regarded from a different standpoint from the enlargement of any other cadre in response to the development of the work to be performed." In connexion with the

growing needs of the Service the Government of India appointed a Committee to examine and report on the question of the reorganization of the Medical Services in India, both Civil and Military. The Committee were to examine the question from the standpoint that it is desirable that there should be a unified Medical Service in India. The Report of the Medical Services Committee has been submitted and the recommendations made therein for the improvement of the various branches of the services are under the consideration of Government.

Pay and Allowance.—The following are the monthly rates of Indian pay drawn by officers of the Indian Medical Service when employed on the military side:—

RANK.		Grade Pay.
Lieutenant	Rs. 550
Captain	700
„	after 5 years' service	750
„	after 7 years' service	800
„	after 10 years' service	900
Major	1,000
„	after 3 years' service as Major	1,150
Lieutenant-Colonel	1,550
„	„ after 25 years' service	1,600
„	„ specially selected for increased pay	1,750

Pensions and Half-Pay.—Officers are allowed to retire on pension on completing 17 years' service, the amount they receive varying with the precise number of years they have served. The lowest rate for 17 years' service is £300 per annum, and the rate for 30 years £700 per annum. The increases in pension for each additional year's service over 17 are somewhat higher in the last 5 than in the first 8 of the 13 years between the shortest and longest periods of pensionable service. All officers of the rank of lieutenant-colonel and major are placed on the retired list on attaining the age of 55 years: the greatest age to which any officer can serve being 60.

In accordance with the orders received from the Right Honourable the Secretary of State for India, sanctioning an increase in the pay of officers of the Indian Medical Service in civil employment, the pay of the various appointments concerned will, when they are held by officers of that service, be fixed at the rates shown in the accompanying statement with effect from the 1st December 1918.

2. Exchange compensation allowance, when admissible, is payable in addition to the rates referred to above.

3. The present classification of Civil and Agency Surgeons as "1st class" and "2nd class" is abolished with effect from the 1st December 1918.

4. The object of the revision is to attract to the service European candidates with the highest professional qualifications, and the question whether Indian candidates entering permanent service after 1st December 1918, shall be eligible for these increased rates of pay, and, if so,

to what extent and under what conditions, has been reserved for further consideration. All Indian officers already in permanent service of 1st December 1918, will be eligible for the rates of pay now sanctioned.

Appointments.	Pay Consolidated.	—
	Rs.	
Director-General, Indian Medical Service	3,500	
Surgeon-General to the Government of Madras, Bombay and Bengal.	3,000

Surgeon to His Excellency the Viceroy	1,800	
Surgeons to Governors, Bombay, Madras and Bengal	1,200	
Police Surgeon, Rangoon	1,250	

Pilot Services.

Appointments to the Bengal Pilot Service are made by the Secretary of State for India and by the Government of Bengal; the latter appointments are limited to Anglo-Indians and Eurasians, and are made under separate regulations. In the case of appointments made by the Secretary of State, preference is given, *asteris paribus*, to candidates who have passed through one of the training ships " Worcester " and " Conway."

Candidates for the Secretary of State's ap-

When on the running list:—

	Rs.
Junior Leadsman107 a month
Second Mate Leadsman135 a month
First Mate Leadsman160 a month

pointments must not be less than 18 and not more than 22 years of age. They must produce a Board of Trade or Colonial Certificate of Competency as a Second Mate, or any higher grade, for a foreign-going ship, and evidence of having served at sea not less than two years in a square-rigged sailing vessel of over 300 tons. The rates of pay and allowances of Leadsman Apprentices while on duty are as follows, without exchange compensation allowance:—

} Plus 50 per cent. of the lead money collected from the ships on which they do duty.

When employed as Chief and Second Officer:—
Chief Officers of pilot vessels, Rs. 160 a month.

As Second Officers of pilot vessels .. Rs. 135 a month.

Plus a mess allowance of Rs. 40 a month.

After five years' service a **Leadsman** Apprentice is allowed to appear at an examination to qualify him for appointment as **Mate Pilot**, but if he shows exceptional ability, and has passed each previous examination on his first attempt, bears a very good character, and is otherwise well reported on, this period may, with the special sanction of Government, be reduced to 4½ years. After three years' service as **Mate Pilot**, he is permitted to go up for an examination to qualify for appointment as **Master Pilot**, and, if successful, is promoted to that grade on the occurrence of a vacancy. Vacancies which occur in the grade of **Branch Pilot** are filled by promotion from the **Master Pilots'** grade, of men who have passed the **Branch Pilots'** examination. If the Local Government has reason to believe that a **Pilot** is, owing to physical unfitness of any kind, incapable of discharging his duties properly, it arranges for his medical examination and takes such action as may seem desirable when the results of that examination are communicated. In particular, **Pilots** are medically examined after the occurrence of any accident to the vessel in their pilotage charge, if the circumstances tend to show that the accident was in any way attributable to physical unfitness on the part of the **Pilot**.

Pilots are not entitled to any salary while on pilotage duty, but receive as their remuneration a share, at present 50 per cent., but liable to alteration at the discretion of the Government of Bengal, of the pilotage dues paid by ships piloted by them. The Government of Bengal reserves to itself the right to require all **Pilots** to obtain a Home Trade **Master Mariner's Certificate** before they are promoted to be **Senior Master Pilots**. Every member of the **Pilot Service** is subject to such rules as the Government of India or as the Government of Bengal under the control of the Government of India, may from time to

time, respectively, make in regard to discipline, leave, leave allowances, number of officers in the service, distribution into grades, tonnage of ships to be allotted to the several grades, etc., and in all respects he is amenable to such orders as may be passed by the Government of Bengal, and is liable to degradation, suspension and dismissal by the Government of Bengal for any breach of such rules or orders, or for misconduct.

Other Pilot Services.—Bengal is the only province that has a covenanted pilot service: elsewhere pilotage is under the control of the local Port Trust. In **Bombay**, for example, the Port Trust have drawn up the following rules for entry into the service:

To be eligible for admission to the **Bombay Pilot Service**, candidates must be **British Subjects**, and at least 21 years of age but not more than 32. They must hold certificates of competency as **Master** and excellent testimonials as regards conduct, character and ability. They will be examined in the Port Office for form and colour vision as prescribed by the Board of Trade, and also an extra form vision test of each eye separately and must undergo an examination by, and produce a certificate from, the Medical Officer appointed by the Port Trustees that they are physically fit, and are of a sufficiently hardy or strong constitution to perform a **Pilot's** duty and that they, to all appearance, enjoy good health. Any **Probationer** may, with the sanction of the Port Officer, go before the Examining Committee, and if he passes he will be eligible for appointment as a **3rd Grade Pilot** when a vacancy occurs. A **Probationer**, not passing the required examination to qualify for performing a **Pilot's** duties within six months after the date of his appointment, is liable to be struck off the list. Promotion to the various grades in the **Pilot service** is generally given by seniority, but the Port Trustees reserve to themselves the right of passing over any **Pilot**. There are 18 **Pilots**, six in each grade, who are paid according to the number of vessels piloted. The average pay of a **1st Grade Pilot** is about Rs. 850, **2nd Grade** about Rs. 750 and **3rd Grade** about Rs. 650.

The Press.

The newspaper Press in India is an essentially English institution and was introduced soon after the task of organising the administration was seriously taken in hand by the English in Bengal. In 1773 was passed the Regulating Act creating the Governor-Generalship and the Supreme Court in Bengal and within seven years at the end of the same decade, the first newspaper was started in Calcutta by an Englishman in January 1780. Exactly a century and a third has elapsed since, not a very long period certainly, a period almost measured by the life of a single newspaper, *The Times*, which came into existence only five years later in 1785; but then the period of British supremacy is not much longer, having commenced at Plassey, only twenty-three years earlier. Bombay followed Calcutta closely, and Madras did not lag much behind. In 1789 the first Bombay newspaper appeared, *The Bombay Herald*, followed next year by *The Bombay Courier*, a paper now represented by the *Times of India* with which it was amalgamated in 1861. In Bombay the advent of the press may be said to have followed the British occupation of the island much later than was the case in Calcutta. In Calcutta the English were on sufferance before Plassey, but in Bombay they were absolute masters after 1665, and it is somewhat strange that no Englishman should have thought of starting a newspaper during all those hundred and twenty-five years before the actual advent of *The Herald*.

The first newspaper was called *The Bengal Gazette* which is better known from the name of its founder as *Hicky's Gazette* or *Journal*. Hicky like most pioneers had to suffer for his enterprising spirit, though the fault was entirely his own, as he made his paper a medium of publishing gross scandal, and he and his journal disappeared from public view in 1782. Several journals rapidly followed Hicky's, though they did not fortunately copy its bad example. *The Indian Gazette* had a career of over half a century, when in 1833 it was merged into the *Bengal Harkaru*, which came into existence only a little later, and both are now represented by *The Indian Daily News* with which they were amalgamated in 1866. No fewer than five papers followed in as many years, the *Bengal Gazette* of 1780, and one of these, *The Calcutta Gazette*, started in February 1784, under the avowed patronage of Government, flourishes still as the official gazette of the Bengal Government.

From its commencement the press was jealously watched by the authorities, who put serious restraints upon its independence and pursued a policy of discouragement and rigorous control. Government objected to news of apparently the most trivial character affecting its servants. From 1791 to 1799 several editors were deported to Europe without trial and on short notice, whilst several more were censured and had to apologise. At the commencement of the rule of Wellesley, Government promulgated stringent rules for the public press and instituted an official censor to whom everything was to be submitted before publication, the penalty for offending against these rules to be immediate deportation. These

regulations continued in force till the time of the Marquis of Hastings who in 1818 abolished the censorship and substituted milder rules.

This change proved beneficial to the status of the press, for henceforward self-respecting and able men began slowly but steadily to join the ranks of journalism, which had till then been considered a low profession. Silk Buckingham, one of the ablest and best known of Anglo-Indian journalists of those days, availed himself of this comparative freedom to criticise the authorities, and under the short administration of Adam, a civilian who temporarily occupied Hastings's place, he was deported under rules specially passed. But Lord Amherst and still more Lord William Bentinck were persons of broad and liberal views, and under them the press was left practically free, though there existed certain regulations which were not enforced, though Lord Clare, who was Governor of Bombay from 1831 to 1835, once strongly but in vain urged the latter to enforce them. Metcalfe who succeeded for a brief period Bentinck, removed even these regulations, and brought about what is called the emancipation of the press in India in 1835, which was the beginning of a new era in the history of the Indian press. Among papers that came into being, was the *Bombay Times* which was started towards the close of 1833 by the leading merchants of Bombay, and which in 1861 changed its name to the *Times of India*, *The Bombay Gazette*, founded in 1791, ceased publication in 1914.

The liberal spirit in which Lord Hastings had begun to deal with the press led not only to the improvement in the tone and status of the Anglo-Indian press, but also to the rise of the Native or Indian Press. The first newspaper in any Indian language was the *Samachar Durpan* started by the famous Serampore Missionaries Ward, Carey and Marshman in 1818 in Bengali, and it received encouragement from Hastings who allowed it to circulate through the post office at one-fourth the usual rates. This was followed in 1822 by a purely native paper in Bombay called the *Bombay Samachar* which still exists, and thus was laid the foundation of the Native Indian Press which at the present day is by far the largest part of the press in India, numbering over 650 papers.

From 1835 to the Mutiny the press spread to other cities like Delhi, Agra, Gwalior, and even Lahore, whereas formerly it was chiefly confined to the Presidency towns. During the Mutiny its freedom had to be temporarily controlled by the Gagging Act which Canning passed in June 1857 on account of the license of a very few papers, and owing still more to the fears of its circulating intelligence which might be prejudicial to public interests. The Act was passed only for a year at the end of which the press was once more free.

On India passing to the Crown in 1858, an era of prosperity and progress opened for the whole country in which the press participated. There were 19 Anglo-Indian papers at the beginning of this period in 1858 and 25 Native papers and the circulation of all was very small. The number of the former did not show a great rise in the next generation, but the rise in

influence and also circulation was satisfactory. Famous journalists like Robert Knight, James Maclean and Hurris Mookerji flourished in this generation. The *Civil and Military Gazette* was originally published in Simla as a weekly paper, the first issue being dated June 22nd, 1872. Prior to and in the days of the Mutiny the most famous paper in Northern India was the *Mofussilite*, originally published at Meerut, but afterwards at Agra and then at Ambala. After a lively existence for a few years in Simla the *Civil and Military Gazette* acquired and incorporated the *Mofussilite*, and in 1876 the office of the paper was transferred from Simla to Lahore, and the *Gazette* began to be published daily. During Lord Lytton's vicereignty a reactionary policy was pursued towards the vernacular press which was restrained by a special Act passed in 1878. With

the advent of Lord Ripon in 1880, the Press Act of Lytton was repealed in 1882. The influence of the native press especially grew to be very great, and its circulation too received a great fillip. This may be said to have gone on till 1897, when India entered upon a disastrous cycle of years during which plague and famine gave rise to grave political discontent which found exaggerated expression in the native press, both in the vernacular and in English. The deterioration in the tone of a section of the press became accentuated as years went on and prosecutions for sedition had little effect in checking the sinister influence. In 1910 Lord Minto passed a Press Act applicable, not like Lytton's Act, to the peccant part alone, but like Canning's measure, to the entire press. (*Vide infra* "The Indian Press Law.")

INDIAN PRESS LAW.

The Newspapers (Incitements to Offences) Act, 1908, was passed in view of the close connexion between the perpetration of outrages by means of explosives and the publication of criminal incitements in certain newspapers. The Act deals only with incitements to murder, to offences under the Explosive Substances Act, 1908, and to acts of violence. It gives power in such cases to confiscate the printing press used in the production of the newspaper, and to stop the lawful issue of the newspaper. The procedure adopted in the Act follows the general lines of that provided in the Code of Criminal Procedure for dealing with public nuisances, with the addition that the final order of the magistrate directing the forfeiture of the press is appealable to the High Court within 15 days. It is further provided that no action can be taken against a press save on the application of a Local Government. When an order of forfeiture has been made by the magistrate, but only in that case, the Local Government is empowered to annul the declaration made by the printer and publisher of the newspaper under the Press and Registration of Books Act, 1867, and thereafter neither that newspaper nor any other which is the same in substance can be published without a breach of the law.

The Indian Press Act, 1910, was a measure of wider scope, the main object of which was to ensure that the Indian press generally should be kept within the limits of legitimate discussion.

The Act deals, not only with incitements to murder and acts of violence, but also with other specified classes of published matter, including any words or signs tending to seduce soldiers or sailors from their allegiance or duty, to bring into hatred or contempt the British Government, any Native Prince, or any section of His Majesty's subjects in India, or to intimidate public servants or private individuals.

The different sections of the Act have in view (i) Control over presses and means of publication; (ii) control over publishers of newspapers; (iii) control over the importation into British India and the transmission by the post of objectionable matter; (iv) the suppression of seditious or objectionable newspapers, books, or other documents wherever found.

As regards the first of these objects, it is laid down that proprietors of printing presses making a declaration for the first time under section 4 of the Press and Registration of Books Act, 1867, shall give security, which may, however, be dispensed with by the magistrate at his discretion; that the proprietors of presses established before the passing of the Act may similarly be required to give security if and when they are guilty of printing objectionable matter of the description to which the Act

applies; and that, where security has been deposited, Local Governments may declare such security forfeit where it appears to them that the press has been used for printing or publishing such objectionable matter. When the initial security so deposited has thus been forfeited, the deposit of further security in a larger sum is required before a fresh declaration can be made under section 4 of the Press and Registration of Books Act, and, if thereafter, the press is again used for printing or publishing objectionable matter the further security deposited and the press itself may be declared forfeit.

Control over publishers of newspapers, the second main object of the Act, is provided for in a similar manner. The keeping of a printing press and the publishing of a newspaper without depositing security when required are punishable with the penalties prescribed for failure to make the declarations required by sections 4 and 5 of the Press and Registration of Books Act, 1867.

Other provisions deal with the cases of books or pamphlets printed out of India or secretly in India. The more efficient control over the importation and transmission by post of objectionable matter of the kind described in the Act is given by empowering the customs and post office authorities to detain and examine packages suspected of containing such matter, and to submit them for the orders of the Local Government.

The fourth object of the Act is attained by authorising the Local Government to declare forfeit any newspaper, book or other document which appears to it to contain matter of the prohibited description, and upon such a declaration the Act empowers the police to seize such articles and to search for the same.

In any case in which an order of forfeiture is passed by the Local Government, an application may be made to the High Court on the question of fact whether the matter objected to is, or is not, of the nature described in the Act. For the most part the object of the Act has been secured, as regards the local press, without recourse to the power of confiscating security.

Press Association of India.—At the end of 1915 this Association was formed in Bombay. According to the articles of constitution "Its objects shall be to protect the press of the country by all lawful means from arbitrary laws and their administration, from all attempts of the Legislature to encroach on its liberty or of the executive authorities to interfere with the free exercise of their calling by journalists and press proprietors, and for all other purposes of mutual help and protection which may be deemed advisable from time to time." Members pay a minimum subscription of Rs. 10 annually. The affairs of the Association are managed by a Council.

Societies : Literary, Scientific and Social.

AGRICULTURAL AND HORTICULTURAL SOCIETY OF INDIA (Calcutta).—Founded 1820. Annual subscription Rs. 32. Entrance fee Rs. 8. *Secretary*, S. Percy-Lancaster, F.R.H.S., 1, Alipore Road, Alipore.

AGRI-HORTICULTURAL SOCIETY OF BURMA.—*Secretary*, Capt. W. H. Allen, Victoria Park, Kandawgray.

AGRI-HORTICULTURAL SOCIETY OF MADRAS.—Established 1833. Quarterly subscription for members in Class A Rs. 7, in Class B Rs. 3. *Secretary*, R. S. F. Simpson, Teynampett, S. W., Madras.

ANTHROPOLOGICAL SOCIETY OF BOMBAY.—Founded 1886, to promote the prosecution of Anthropological research in India; to correspond with Anthropological Societies throughout the world; to hold monthly meetings for reading and discussing papers; and to publish a periodical journal containing the transactions of the Society. Annual subscription Rs. 10. *Secretary*, Shams-ul-Ulma Dr. Jivanji Jamshedji Modi, B.A., Ph. D., C.I.E., Town Hall, Bombay.

ASIATIC SOCIETY OF BENGAL (Calcutta).—*Secretary*, G. H. Tipper, M.A., 57, Park Street, Calcutta.

BHANDARKAR ORIENTAL RESEARCH INSTITUTE, POONA.—The Institute was inaugurated on the 6th of July 1917, the 80th birthday of Sir R. G. Bhandarkar, at the hands of H. E. Lord Willingdon who became its first President. Its objects are to provide an up-to-date Oriental Library, to train students in the methods of research and to act as an information bureau on all points connected with Oriental Studies. Sir R. G. Bhandarkar has already bequeathed to the Institute his valuable private library of Oriental books. Since the 1st of April 1918 the Government of Bombay have transferred to the Institute the unique collection of manuscripts at the Deccan College together with a maintenance grant of Rs. 3,000 a year. Government have likewise entrusted to the Institute for the next five years the sole administration of the Budget grant of Rs. 12,000 a year on account of publication. The Institute has undertaken to edit the *Mahabharata* critically at the request of the Chief of Aundh who has promised a grant of Rs. 6,000 annually for that purpose. Minimum membership dues Rs. 10 a year or Rs. 100 compounded for life. *Secretary*, Dr. P. D. Gune, Fergusson College Road, Poona City.

BOMBAY ART SOCIETY.—Founded 1888, to promote and encourage Art by exhibitions of Pictures and Applied Arts, and to assist in the establishment and maintenance of a permanent gallery for Pictures and other works of Art. Annual exhibition every February. Annual subscription Rs. 10; Life Member Rs. 100. *Secretary*, S. V. Bhandarkar, Bombay.

BOMBAY BRANCH OF THE CLASSICAL ASSOCIATION.—The Classical Association was started in 1903 in London, to promote the development and maintain the well-being of classical studies. The Bombay Branch was founded in 1910; it numbers over 100 members; holds

5 or 6 meetings a year; and publishes a yearly journal. Subscription Rs. 6 for ordinary and Rs. 2-8-0 for associate members.

Secretary, Mrs. Gray, 13, Marine Lines, Bombay.

BOMBAY BRANCH OF THE ROYAL ASIATIC SOCIETY.—Founded 1804, to investigate and encourage Oriental Arts, Sciences and Literature. Annual subscription Rs. 50. *Secretary*, The Rev. R. M. Gray, Town Hall, Bombay.

BOMBAY NATURAL HISTORY SOCIETY.—Founded 1883, to promote the study of Natural History in all its branches. The Society has a membership of about 1,700 and a small museum with a representative collection of the different vertebrates and invertebrates found in the Indian Empire and Ceylon. A Journal is published quarterly which contains articles on different natural history subjects as well as descriptions of new species and local lists of different orders. In the more recent numbers, serial articles on game birds, common snakes, and common butterflies have been appearing. Annual subscription Rs. 15. Entrance fee, Rs. 10. *Honorary Secretary*, W. S. Millard, *Curator*, N. B. Kinnear, Office and Museum, 6, Apollo Street, Bombay.

BRITISH AND FOREIGN BIBLE SOCIETY.—Since 1811 the British and Foreign Bible Society has been at work in this country. It has 6 Auxiliaries in India and an Agency in Burma. The first Auxiliary was established in Calcutta, in 1811, then followed the Bombay Auxiliary in 1813, the Madras Auxiliary in 1820, the North India Auxiliary in 1845, the Punjab Auxiliary in 1863, the Bangalore Auxiliary in 1875, while the Burma Agency was founded in 1899. The Bible or some portion of it is now to be had in nearly 100 different Indian languages and dialects and the circulation throughout India and Burma reached nearly 1½ million copies in 1918. The Bibles, Testaments, and Portions in the various Vernaculars are sold at rates which the very poorest can pay, and at considerable loss to the Society. Grants of English Scriptures are made to Students who pass the various University examinations, whose applications are countersigned by their Principals, as under:—

The 4 Gospels and the Book of Acts in 1 Vol. to Matriculates.

The New Testament and Psalms to Intermediates.

The Bible to Graduates.

Last year 8,559 volumes were so distributed. Portions of Scriptures in the important vernaculars have been prepared in raised type for the use of the Blind and large grants of money are annually given to the different Missions, to enable them to carry on Bible women's work and Colportage.

Besides the British and Foreign Bible Society, there is Bible work carried on in India, Assam and Burma in a much smaller way by the Bible Translation Society—which is connected with the Baptist Missionary Society—the American and Canadian Baptist Mission, the National Bible Society of Scotland, and the Tranquebar Tamil Bible Society,

The following table shows the growth in the British & Foreign Bible Society's work during the past few years in India & Burma :—

CIRCULATION OF THE B.F.B.S. IN INDIA.

Auxiliaries.	1918.	1917.	1916.	1915.	1914.
Calcutta	182,436	172,734	139,499	148,058	169,285
Bombay	230,499	202,407	189,594	184,937	181,452
Madras	290,650	275,802	275,264	233,420	263,805
Bangalore	Not to hand.	32,974	34,265	36,336	35,658
North India	213,460	226,546	189,564	172,172	210,754
Punjab	98,296	150,366	157,680	115,391	122,224
Burma	101,003	107,623	105,127	117,948	117,518
Total copies of Scriptures ..	1,116,344	1,168,452	1,090,993	1,008,262	1,100,696

These returns do not include the copies which any Auxiliary has supplied to London or to other Auxiliaries and agencies during the year.

BRITISH MEDICAL ASSOCIATION (Bombay Branch).—Founded 1886, to promote Medical and the Allied Sciences and the maintenance of the honour and interests of the Medical Profession. *Secretary*, Dr. D. R. Bardi, Bombay.

BOMBAY MEDICAL UNION.—Founded 1883 to promote friendly intercourse and exchange of views and experiences between its members and to maintain the interest and status of the medical profession in Bombay. The entrance fee for Resident members Rs. 5, monthly subscription Rs. 2. Absent members Re. 1, and non-resident members yearly subscription Rs. 5. *President*: Dr. F. N. Kapadia. *Secretaries*: Dr. R. D. Mody and Dr. A. K. Contractor. *Hon. Librarians*: Dr. K. P. Mody and Dr. V. G. Rele. *Treasurer*: Dr. M. P. Kerrawala, 123, Esplanade Road, Bombay.

BOMBAY SANITARY ASSOCIATION.—Founded to create an educated public opinion with regard to sanitary matters in general; (b) to diffuse the knowledge of sanitation and hygiene generally, and of the prevention of the spread of disease amongst all classes of people by means of lectures, leaflets and practical demonstrations and, if possible, by holding classes and examinations; (c) to promote sanitary science by giving prizes, rewards or medals to those who may by diligent application add to our knowledge in sanitary science by original research or otherwise; (d) to arrange for homely talk or simple practical lectures for mothers and girls in the various localities and different

chawls, provided the people in such localities or chawls give facilities. The Sanitary Institute Building in Princess Street, which has lately been built by the Association, at a cost of nearly Rs. 1,00,000 the foundation stone of which was laid by Lady Willingdon in March, 1914, and opened in March, 1915, is a large and handsome structure with a large Lecture Hall, Library, Museum, etc., and also provides accommodation for King George V. Anti-Tuberculosis League Dispensary and Museum and the Office of the Deputy Health Officer C. Ward and the Vaccination Station. *Hon. Secretary*: Dr. James Cairns, Senior Assistant. Health Officer, Bombay.

EUROPEAN ASSOCIATION.—The European Association was established in 1883 under the title of the European and Anglo-Indian Defence Association and was re-established in 1912 under the title of the European Defence Association, but the present title was adopted in 1913. The Association has for its objects the general protection of European interests and the promotion of European welfare. The Association numbers 8,261. The Head Offices are at Dalhousie Square, Calcutta. *President*, Mr. G. Morgan.

BRANCHES OF THE EUROPEAN ASSOCIATION.

ASSAM VALLEY, DIBRUGARH.—*Chairman*, Mr. L. A. Roffey. *Hon. Secretary*, Mr. A. L. Allum.

BIHAR, MOZUFFERPORE.—*Chairman*, Mr. P. Kennedy. *Hon. Secretary*, Mr. J. M. Wilson.

LONGHYR (Sub-Branch).—*Chairman*, Mr. J. C. Aguilar; *Secretary*, C. H. C. Havelock.

BOMBAY.—*Chairman*, Mr. W. A. Haig-Brown. *Hon. Secretary*, Mr. H. F. Weston.

BURMA, RANGOON.—*Chairman*, Mr. J. W. Richardson. *Hon. Secretary*, R. Thompson Stoneham.

DARJEELING.—*Chairman*, Mr. E. A. Scarth. *Hon. Secretary*, Mr. Kenneth Mackenzie.

DELHI.—*Chairman*, Mr. H. H. Yule. *Hon. Secretary*, Mr. R. Macpherson.

DOOARS, JALPAIGURI.—*Chairman*, Mr. H. B. Bradant Smith. *Hon. Secretary*, Mr. J. A. Polewhale.

MADRAS.—*Chairman*, Mr. H. P. E. Rae. *Joint Hon. Secretaries*, Messrs. A. D. Charles and P. Holt.

PUNJAB, LAHORE.—*Chairman*, Mr. Owen Roberts. *Secretary*, Mr. L. E. Banfield.

RAJPUTANA, AJMER.—*Chairman*, Mr. W. S. Fraser. *Hon. Secretary*, Mr. L. N. Lloyd.

SIND, KARACHI.—*Chairman*, Mr. W. D. Young. *Hon. Secretary*, Mr. E. J. McNulty.

BURMA VALLEY, SILCHAR.—*Chairman*, Mr. A. F. Stewart. *Hon. Secretary*, Mr. J. C. Henderson.

UNITED PROVINCES, CAWNPORE.—*Chairman*, Mr. S. H. Taylor. *Hon. Secretary*, Mr. J. G. Ryan.

INDIAN ASSOCIATION FOR THE CULTIVATION OF SCIENCE (Calcutta).—*Secretary*, Dr. Amrita Lal Sircar, 210, Bow Bazar Street, Calcutta.

INDIAN LIBERAL CLUB.—Started on 30th March 1917, to promote a systematic study of politics in general and Indian politics in particular, to organise free and well informed discussions on current political topics as well as on abstract questions to provide facility for collecting information in questions arising, or necessary to be raised, in the Imperial and Provincial Legislative Councils and to form and maintain a library.

Office: Servants of India Society, Sandhurst Road. *President*, Sir Narayan Chandavarkar. *Secretaries*, Mr. J. R. Gharpure, B.A., LL.B., and Mr. C. S. Deole, B.A.

INDIAN ECONOMIC SOCIETY (BOMBAY).—Started in 1915, with the object of affording facilities for an accurate and scientific study of economics, for the formation and dissemination of current economic ideas and for collecting first hand information regarding the industry and commerce of the country with a view to the removal of difficulties in the way of their promotion and development. The Society arranges periodical discussions and publishes pamphlets and it holds weekly Marathi Class in Economics. The Society also publishes a quarterly Journal entitled "The Journal of the Indian Economic Society." Subscription, a minimum of Rs. 6 a year. *President*, Mr. J. A. B. Petit. *Secretaries*, Mr. C. S. Deole of the Servants of India Society, Mr. N. M. Muzumdar, Mr. Gulabchand Devehand, Mr. M. D. Altekar. *Office*—Servants of India Society's Home, Sandhurst Road, Girgaon, Bombay.

INDIAN MATHEMATICAL SOCIETY.—Founded in 1907 for the advancement of Mathematical studies in India. It conducts a bi-monthly journal in which papers on mathematical sub-

jects are published and maintains a library with current mathematical periodicals in all languages and new books on the subject. The library is located in the Fergusson College, Poona, whence the journals and books are circulated to members by post. The journal of the Society is published in Madras. There are about 150 members from all parts of India. *President*, Principal A. C. L. Wilkinson, M.A., Elphinstone College, Bombay. *Secretaries*, Prof. D. D. Kapadia, Poona, and Prof. M. T. Naraningar, Bangalore. *Librarian*, Principal R. P. Paranjpye, Poona.

INDIAN SOCIETY OF ORIENTAL ART (Calcutta).—*Joint Secs. and Treasrs.*, N. Blount and B. C. Law, P. O. Box No. 8, Calcutta.

INDIA SUNDAY SCHOOL UNION.—The India Sunday School Union is a large indigenous interdenominational Society having the sympathy and co-operation of the greater number of Missionary Societies in India. The chief objects of the Union are the promotion of systematic and careful Bible study, and the increased efficiency of Sunday Schools in India. Its operations extend beyond the borders of India itself to Mesopotamia, Siam and Borneo. Approximately 750,000 Sunday School scholars and teachers and 13,944 Sunday Schools are connected with the Union, speaking 45 Vernaculars. One Central and 60 Provincial and Mission Committees control its Indian work, which forms part of a world-wide movement with a membership of 35,000,000. Her Excellency Lady Chelmsford, C.I., G.B.E., is the Patroness.

The India Union was founded in Allahabad in 1876. Yearly examinations are held for both teachers and scholars in thousands of centres, for which medals, prizes, scripture awards, and certificates are granted to successful candidates. Upwards of 260,000 candidates have been examined in six months' Bible study since 1896, no less than 200,000 granted illuminated certificates and in 1917 nearly 50 medals were awarded. Notes on the daily portions of the Interdenominational Bible Reading Association are published by the I. S. S. U. in English and 14 Vernaculars, and 50 editions of the S. S. Lesson Expositions are published in 20 Vernaculars. In addition, there is a large publication of literature dealing with all phases of child study and moral and religious training. The monthly publication of the Union is the *India Sunday School Journal*. The Teachers Training Department is under the care of Mr. E. A. Annett supported by the W. S. S. A. *General Secretary of the Union*, the Rev. R. Burges, India Sunday School Union, Jubbulpore.

MADRAS FINE ARTS SOCIETY.—*Secretary*, Edgar Thurston, Central Museum, Madras.

MADRAS LITERARY SOCIETY AND AUXILIARY OF THE ROYAL ASIATIC SOCIETY.—*Secretary*, W. F. Graham, I.C.S., College Road, Nungambakum.

NATIONAL INDIAN ASSOCIATION.—Founded in 1870. Its objects are:—(a) To extend in England, knowledge of India, and interest in the people of that country. (b) To co-operate with all efforts made for advancing Education

and Social Reform in India. (c) To promote friendly intercourse between English people and the people of India. In all the proceedings of the Association the principle of non-interference in religion and avoidance of political controversy is strictly maintained. It has branches in Bombay, Madras, Ahmedabad, Nagpur, Calcutta, Rangpur, Poona & Lahore. *Hon. Secretary*, Miss Beck, 21 Cromwell Road, London. Publication, *The Indian Magazine and Review*, a monthly Journal which chronicles the doings of the Association in England and in India, and takes note of movements for educational and social progress. It publishes articles about the East to interest Western readers, and articles about the West to interest readers in the East.

LIFE MEMBERS.—Ten Guineas Annual Subscriptions; Members one Guinea; County Members, Ten Shillings; Associates (Students), Five Shillings.

PHILATELIC SOCIETY OF INDIA.—Annual subscription Rs. 15. *Secretary*, Jno. Godinho, 15 Burrow's Street, Bombay.

PHOTOGRAPHIC SOCIETY OF INDIA (Calcutta).—Annual subscription Rs. 24 (Town Members) and Rs. 10 (Mofussil members). Entrance fee Rs. 20 and Rs. 10. *Secretary*, A. E. Harris, 40, Chowringhee Road, Calcutta.

POONA SEVA SADAN.—This institution was started in 1909 by Mrs. Ramabai Ranade, Mr. G. K. Devadhar and a few other ladies and gentlemen in Poona. It is now working independently though for a part of the intervening period it was conducted as a branch of the Bombay Seva Sadan. Its main object is to make women self-reliant and to train them for missionary work undertaking educational and medical work for their sisters and brethren, especially in backward areas and working on a non-sectarian basis. The instruction is free except for the Music Classes. There are seven different departments sub-divided into 43 classes. Arrangements are made for training nurses and midwives at the Sassoon Hospital, Poona, and a Hostel is maintained for them and also for those attending the Sub-Assistant Surgeons' Class. There is a Training College with 86 students for training Mistresses for Vernacular schools. This college is probably the only college in India maintained by a non-official, non-Christian missionary body teaching the full course. The results of the Certificate examinations held last year under the authority of the local Government Training College for Women were as follows, III year, 9 students passed out of 12, II years 6 out of 13, and I st year, 12 out of 22. The Practising School for little girls attached to the Training College has now 232 students reading up to the Marathi VI Standard. Primary Classes for grown up women teaching up to the Marathi Fifth Standard are attended by 115 women. It is here that poor women are recruited for the work of teacher, nurse or midwife. Special classes for teaching English, First Aid, and Home Nursing were attended by 84 students; the Music Classes by 77 students, and the Workroom Classes for teaching

Sewing, Embroidery, Hosiery and Weaving, by 105 students. Thus the total number of pupils is 730 to-day (including about 150 duplications). The Institution maintains a hostel with 42 inmates for the Training College and another with 25, for very poor women. In connection with the medical branch a Committee has recently been formed in England, with Lord Reay as President, which will enable the Society to send fully qualified Nurses there to undergo further training. Now Her Excellency Lady Lloyd is the Honorary Patroness along with Lady Willingdon and Lady Sydenham. The Institution is largely supported by public contributions and Government assistance. The annual expenditure roughly comes up now to Rs. 40,000 a year. *President*, Mrs. Ramabai Ranade; *Honorary General Secretary and Organiser*, Mr. Gopal Krishna Devadhar, M.A.; *Local Secretary and Treasurer*, Mrs. Yamunabai Bhat; *Lady Superintendent*, Mrs. Jankibai Bhat; *Secretary*, Nursing Committee, Rao Bahadur Dr. P. V. Shikhare, L.M. & S.

RANGOON LITERARY SOCIETY. *Secretary*, Mr. Hunter, 13, York Road.

ROYAL SOCIETY OF ARTS, INDIAN SECTION.—This Society was founded in London in 1754. Its recently published history by Sir Henry Trueman Wood, late Secretary of the Society, gives the following account of the Indian Section. In 1857, a proposition was made by Mr. Hyde Clarke, who wrote to the Council suggesting that "a special section be formed for India, another for Australia, one for English America and so on." It was suggested that the Indian Section should meet once a fortnight for the reading of papers. Nothing came of the suggestion until ten years later when Mr. Hyde Clarke returned to England, and in 1868 he renewed his proposal, but only proposing the formation of a committee which should organise conferences on Indian subjects. This time the suggestion was taken up more warmly. Mr. Hyde Clarke himself was placed on the Council, and the Indian Conferences, which soon developed into the Indian Section, were started. "The Indian Section thus established became a most important department of the Society. It has had great results in India by spreading information as to the directions which the development of Indian manufactures and Indian products could most usefully take, and in England by giving similar information as to the industrial resources and progress of India itself. The Section has received great help from the Indian press and it has in return been of service to the Indian press in supplying useful information to it. It has been of great value to the Society itself as the means by which many members have been added to its list, so that in fact, thanks to a very large extent to the work of the Indian Section and of the allied section for the Colonies, a large proportion of the present number of members come from the dependencies of the Empire abroad." *Secretary of the Society*, G. K. Menzies, M.A.; *Secretary of the Indian and Colonial Sections*, S. Digby, C.I.E., 18, John Street, Adelphi, London, W. C. 2.

SERVANTS OF INDIA SOCIETY.—The Servants of India Society which was founded by the late Hon'ble Mr. Gopal Krishna Gokhale, C.I.E., in 1905, has its Head-quarters in Poona and its objects are "to train national missionaries for the service of India and to promote by all constitutional means the true interests of the Indian people." Its government is vested in the First member or President and a Council. On the death of Mr. Gokhale in February, 1915, the Hon'ble Mr. V. S. Srinivasa Sastri was elected President. He has again been re-elected for a further term of three years. It has at present four branches, viz., (1) in Bombay, (2) in Madras, (3) in the United Provinces, (4) in Central Provinces. Each Branch consists of ordinary members, members under training and permanent assistants who work under the direction of a Senior Member. The branches engage both in propagandist and active work of political, educational, social, agricultural and philanthropic character in which they secure the help of a large number of voluntary workers both men and women. A fair idea of the work of a branch can be had from a brief description of the operations of the Bombay Branch whose members have so far undertaken activities in various fields. (1) Social purity like the Holika Sammelan of Bombay, (2) Social reform organization under the auspices of the National Social Conference, (3) rousing public opinion about elementary education, (4) promotion of the cause of elevation and education of Indian women by building up institutions like the Seva Sadan, Poona, (5) social service as carried out by the social service League of Bombay, (6) spread of co-operative movement among the agriculturists, compositors in the city of Poona and mill-hands in Bombay. The co-operative societies, as at Hadapsar in and other villages around Poona, started for the benefit of these poor people number over 35 with a total membership of over 1,800, capital of nearly one and half lakhs and a total turnover of three lakhs per year. Nineteen of these societies which are in Bombay for poor labouring classes are so conducted as to free their members entirely from their chronic indebtedness. Their membership consists of sweepers, scavengers, mill-hands numbering above 550 and debts amounting to nearly two lakhs of rupees have been cleared off. Moreover, educational work is organized by starting a Co-operative Secretaries Training Class in Bombay for 60 Secretaries from the various districts these three years. These two experiments on such a scale are the first of their kind in India, (7) relief work connected with wide-spread calamities by organizing the Plague Relief Committee of Poona, which succeeded in making inoculation popular in the Deccan, the Salumbra Fire Relief Committee which arranged for the relief to sufferers for five years and by undertaking a scheme of non-official relief during the famines of 1907-08 and 1914 in the United Provinces, the famine in Gujarat and Kathiawar of 1911-12 and the famine of 1913 in the district of Ahmednagar, and that of 1918-19 in Gujarat and the Deccan, (8) Influenza relief was well organised by mem-

bers of these associations in Bombay and Poona, (9) organising public opinion on the question of Indians in South Africa, (10) its political work is conducted strictly on constitutional lines and thus it was able to start District Congress Committees in several wards of the city of Bombay. These conducted a political quarterly, (11) it has started in Bombay an organisation called the Indian Economic Society with a view to promoting the study of Indian economics on right lines and also conducts a vernacular class, (12) A new association called the Liberal Club has been started to carry on political propaganda. Besides, the Society is now engaged in conducting a scheme of welfare work to supply cheap grain, cheap cloth and cheap credit at Jamshepur. Government help in this scheme. Quite recently the United Provinces Branch organised a band of volunteers who rendered assistance, in a manner that drew general approbation, to the pilgrims at the last Kumbha Mela in Hardwar and Allahabad, the ladies of the Poona Seva Sadan assisting in this work. The Society engages in journalistic work also, having in its control the *Uttarada* and English weekly in Nagpur, the *Dnyan Prakash*, a Marathi daily and weekly in Poona, and the *Hindustani*, an Urdu weekly in Lucknow. The Society has recently started an English Weekly called *The Servant of India*. The U. P. Branch has in addition undertaken the publication of pamphlets on public questions and has sent out three such publications together with a large quantity of leaflets.

The expenses incurred by the Central Home of the Society in Poona and its four branches exceed Rs. 45,000 a year and this amount is made up by contributions from Indians, rich as well as poor. The present number of workers enlisted by the Society is about 25, most of whom are University men of considerable standing. Besides there is a large number of devoted associates.

President.—The Hon'ble Mr. V. S. Srinivasa Sastri, B.A., L.T., Triplicane, Madras, Senior Member, Madras Branch. *Vice-President:* Mr. Gopal Krishna Devdhar, M.A., Senior Member, Bombay Branch. Mr. Natesh Appaji Dravid, M.A., Senior Member, Central Provinces Branch. Mr. Hirdayanath Kunzru, B.A., B. Sc., Senior Member, Upper India Branch. Mr. S. G. Vaze, B.A., Senior Member, Business Branch, Poona. Messrs. Joshi, Kunzru and Vaze together with the senior members constitute the Council of the Society with the Hon'ble Mr. Sastri as its President. Mr. Anant Vinayak Patwardhan is the Secretary of the Council and also of the Society.

SEVA SADAN.—The Seva Sadan Society was started on the 11th of July, 1908, by the late Mr. B. M. Malabari. It is the pioneer Indian ladies' society for training Indian sisters ministrant and serving (through them) the poor, the sick and the distressed. The society has a habitation in Gamdevi, Bombay. One-half of the Building and Endowment Fund of Rs. 82,000 has been spent mainly in building at Gamdevi, and partly in the purchase

of two acres of land at Santa Cruz for a "Sisters' Home" and other purposes.

The Society maintains the following institutions for training its probationers and for doing its other work. 1. A home for the Homeless. 2. An Industrial Home with various departments. 3. A Dispensary for Women and Children. 4. Ashrams. 5. Free educational classes and a Library and Reading-room. 6. Home-Classes in the quarters of the poor, and normal classes for training Marathi women for the teacher's profession. All these are for the benefit of poor women. *Secretary*, Miss B. A. Engineer, M.A., LL.B., *President*, Mrs. Ramabai Ranade, *Hon. Gen. Secretary*, the Hon. Mr. Lalubhai Samaldas, C.I.E., *Treasurers*, Sister Sushilabai and the Hon'ble Mr. Lalubhai Samaldas; *Trustees*, Sir Narayan Chandavarkar, Sir Bhalchandra Krishna, Sir V. D. Thackersey, the Hon. Mr. G. K. Parekh and the Hon. Mr. Lalubhai Samaldas, C.I.E.

CONSUMPTIVES' HOME SOCIETY.—This Society was started by the late Mr. B. M. Malabari on the 1st of June 1909. It was registered under Act XXI of 1860. It is an off-shoot of the Seva Sadan. Mr. Malabari secured a large grant of land in a Himalayan pine forest in Dharmpur (Simla Hills) from H. H. the Maharaja of Patiala, for a Sanatorium for Consumptives. The Sanatorium was started on June 1, 1909, and has been in existence ever since. Mr. Malabari collected an Endowment Fund of about Rs. 67,000 lodged with the Treasurer Charitable Endowments, under Act VI of 1890. Nearly Rs. 1,37,000 have been spent on buildings, etc., and the current annual expenditure is about Rs. 26,000. Dr. Nanavati, L. M. & S., and B.Sc., is in charge of the Sanatorium.

SOCIETY FOR THE PROMOTION OF NATIONAL EDUCATION.—This Society stands for an Indian education for Indian boys and girls, its general policy being embodied in "Principles of Education" by Mrs. Besant. *President*: Sir Rash Behari Ghose. *Treasurer*: Narottam Morarji Goculdas. *Registrar*: G. S. Arundale, Adyar, Madras.

SOCIETY FOR THE PROTECTION OF CHILDREN IN WESTERN INDIA.—*Office and Refuge*: Girgaon Back Road, Bombay.

Founded.—To prevent the public and private wrongs of children and the corruption of their morals; to take action for the enforcement of the laws for their protection, and, if necessary, to suggest new laws or amendments of the existing laws; to provide and maintain an organisation for these objects; and to do all other lawful things incidental or conducive to the attainment of the foregoing objects.

Subscription for annual membership, Rs. 10; for Life Membership, Rs. 100.

Honorary Secretaries: Mr. Mahomedbhoj Currimbhoj, Mr. N. V. Mandlik, B.A., LL.B., Mr. R. P. Masani, M.A.

WEST OF INDIA ANGLING ASSOCIATION.—The Association was started in 1912 at Poona, the headquarters were transferred to Bombay in 1915, and the membership has increased

considerably since then. The rights for stocking, preserving and angling in Lake Sydenham at Walwhan, near Lonavla, have been obtained by the Association from the Tata Hydro-Electric Power and Supply Co. and a commencement has been made with stocking the lake with sporting fish which as far as can be ascertained are doing well. Bottom fishing for indigenous fish is only allowed at present but it is hoped that the lake will be open this year for fly fishing and spinning. A journal is published which contains articles on fishing, experiences in the rivers and lakes and on the coasts of India, the sporting fishes of the country and notes of general interest to Indian anglers.

Entrance fee Rs. 15, Annual subscription Rs. 10. *Patron*, H. E. Lord Willingdon. *President*, E. Comber. *Hon. Secretary*: G. V. E. Wesche-Dart, Bombay Club, and *Hon. Treasurer*, G. B. Adamson, C/o Russo-Asiatic Bank, Bombay.

YOUNG WOMEN'S CHRISTIAN ASSOCIATION OF INDIA, BURMA AND CEYLON.—This was started in India in an organized and National way in 1896. The aim of the Association is to meet the needs of the girls and women who live in India from an Intellectual, Spiritual, Social and Physical standpoint. This is done in many ways in the local Associations that now flourish under the auspices of the National Young Women's Christian Association. The Associations in the big cities have a large membership and include all classes of the community. Clubs, Classes, Lectures, Commercial Courses, Music, Languages, Bible and Mission Study, Social Intercourse, Physical Training, and all kinds of physical recreation are carried on as need arises in these City Associations. Boarding Homes are established in all the principal cities where teachers, nurses, business girls, students, apprentices, etc., can have a comfortable home with good wholesome food and congenial companionship for Rs. 30 per month. Travellers' Aid work is done and many travellers, especially in the port cities, find accommodation as they pass through. Employment is also found for women and girls. A useful feature of the Association is the Holiday Homes that are conducted in the hills, where girls from the plains can find inexpensive accommodation and regain health and strength. Some of the homes accommodate as many as forty-five at one time and hundreds benefit during the season. The work of the Association in the large cities is managed by a staff of Y. W. C. A. Secretaries, who are fully trained and equipped to meet the many demands that are made on them. These Secretaries are supplied from America, Britain, Australia, Canada and India.

Many of the Associations are in small up country stations where a handful of members constitute the Branch, led by some lady in the station who is glad of this opportunity for service. The members of these small stations may be transferred, in the ever-changing life of India, into the larger cities and then they learn in a fuller way what the Association can do to help them in all-round development. In addition to the work of the City Department described above, the student department (which

is affiliated to the World's Christian Student Federation) has branches in schools and colleges, while the Vernacular Department is carrying on valuable work in co-operation with Missionary societies in five different languages. The National Headquarters are in Calcutta. The inter-denominational character of the Association is clearly kept in the forefront and ladies of many Christian denominations are on the Committee. The National Committee consists of resident and non-resident members, representative of the City, Student and Vernacular Departments in various sections of the country.

Two newer developments of the work are the Research Section conducted by Mrs. Sinclair Stevenson, M.A., D.S.C. (author of "The Heart of Jainism"), and the provincial organization of branches into District Committees. The Patroness of the Association is H. E. Lady Chelmsford, who is also President of the Simla Branch.

Copies of the annual report can be obtained from the National Office which is now at 5, Russell Street, Calcutta.

The Official Organ of the Association is "Woman's Outlook in India," which has circulation of over 1,500 copies monthly.

This supplies women living in India with a good review at the price of Rs. 2-0-0 post free a year.

YOUNG MEN'S CHRISTIAN ASSOCIATION.—This Association, which was founded by the late Sir George Williams on June 6, 1844, seeks to unite those young men who, regarding Jesus Christ as their God and Saviour according to the Holy Scriptures, desire to be His disciples, in their doctrine and in their life, and to associate their efforts for the extension of His kingdom among young men. The above is known as the "Paris Basis" and it is world-wide. It was adopted at the first World's Convention in Paris in 1855 and re-affirmed at the Jubilee World's Convention in Paris in 1905. The aim of the Association is through its religious, educational, and physical work to cater for the threefold—spiritual, mental and physical—needs of young men, and its policy is one of intense loyalty to the Church.

There are, as a rule, two classes of members. Any young man who is a member in full communion of any Protestant (including Anglican and Syrian) Christian church may be an active or voting member and any young man of good character may be an associate.

The Young Men's Christian Association though relatively new to India, is spreading rapidly. The local Associations are autonomous and governed by local Boards of Directors. These Associations in convention elect a National Council of European and Indian laymen, who are responsible for the supervision and expansion of all forms of the Association work. Both the National Council and the local Associations employ specially trained full time Secretaries. Over two-thirds of the Secretaries are supported from funds raised in India and Ceylon. The remaining Secretaries are supported by the Associations

of North America, Australasia, and Great Britain, but their work is directed by committees in India, to whom their services are loaned for the time-being. The first paid Secretary came to India over twenty-five years ago, in response to an appeal from Madras. Soon afterwards the National Council was organised, and has become increasingly an indigenous institution.

There are now approximately 250 Associations with 15,000 members. Of these about one quarter are Europeans and three quarters are Indians, of whom over half are non-Christians. The following Associations own one or more buildings which serve as the local headquarters:—Allahabad, 2; Bangalore, 3; Alleppey, 1; Bombay, 4; Calcutta, 5; Calicut, 1; Coimbatore, 1; Colombo, 1; Galle, 1; Hyderabad, 2; Jubbulpore, 2; Kandy, 1; Karachi, 1; Lahore, 1; Madras, 1; Mandalay, 1; Maymyo, 1; Nagpur 2; Naini Tal, 1; Rangoon, 3; Secunderabad, 1; Simla, 1.

In addition to buildings owned by the Association, bungalows have been rented to serve as headquarters in the following stations:—Ahmednagar, 1; Allahabad, 1; Bangalore, 2; Colombo, 2; Delhi, 1; Feroz-pore, 1; Hyderabad, 1; Jamalpur, 1; Jhansi, 1; Jubbulpore, 1; Lahore, 2; Lucknow, 1; Madras, 1; Madura, 1; Mhow, 1; Palamcottah, 1; Multan, 1; Poona, 1; Rangoon, 1; Trivandrum, 1.

The departments of the National Council are Student, Railway, Rural, Literary, Army High School, Architectural, Publication and Physical. The Student Christian Association, though an independent movement, is affiliated to the National Council and has branches in more than two score Colleges. The Railway Department is responsible for the development of work amongst railway employes. At Jamalpur the Railway Institute and Apprentices Engineers Club are operated by the Y. M. C. A. The Rural Department is organising village Y. M. C. A.'s and co-operative credit societies and promoting cottage industries. The Literary Department maintains two Secretaries:—J. N. Farquhar for Hinduism, K. J. Saunders for Buddhism. The object of the department is to promote a proper and sympathetic understanding of the non-Christian religions and show their relationship to Christianity. At the beginning of the war there were but three Army Associations and five Army Secretaries in the whole of India. Now Association privileges are provided for British and Indian Troops in twenty-nine cantonments under the direction of seventy Secretaries and Assistants. Eighty Secretaries are at work in Mesopotamia, ten serve the Indian Expeditionary Force in Europe and Egypt and 19 in British East Africa. In addition to organising school boys' Y. M. C. A.'s the High School Department arranges for holiday camps for boys and High School teachers. The National Council employs its own architects who plan and construct its buildings, hostels, and playgrounds. The Physical Department specialises on physical education and is promoting the playground movement. A Nation-

at Training School is established at Bangalore for the training of Indian Secretaries.

The "Association Press" is the Publication Department. A monthly magazine, the **YOUNG MEN OF INDIA**, is issued, and many books and pamphlets, both on Association subjects and on those of more general interest. Some of the latter, *e.g.*, the *Heritage of India Series*, have been issued in conjunction with the Oxford Press.

The Headquarters of the National Council is 5, Russell Street, Calcutta. The officers are :—

Patron:—His Excellency Lord Chelmsford, Viceroy and Governor-General of India.

Chairman:—Raja Sir Harnam Singh, K.C.I.E.

Chairman of Executive:—Sir Francis H. Stewart, Kt., C.I.E.

Treasurer:—W. R. Gourlay, Esq., C.I.E., I.C.S., 8, Government Place, Calcutta.

General Secretaries:—E. C. Carter, K. T. Paul, F. V. Slack.

The Bombay Association now possesses four well-equipped buildings:—Wodehouse Road, Lamington Road, Rebsch Street, and Reynolds Road. The President is the Hon'ble Mr. G. Carmichael, C.S.I., I.C.S., and the General Secretary is Mr. I. R. Lines. In connection with each building there is a well managed hostel, one for Anglo-Indian apprentices, one for Indian students, one primarily for European business men, and one for Indians. The Elton Hockey Tournament and the Condor Tennis Tournament are held annually under the auspices of the Bombay Association.

ASSOCIATION OF UNIVERSITY WOMEN IN INDIA.

The Association of University Women in India was established in 1913. Its objects are :—

(1) To facilitate intercommunication and co-operation between women belonging to the universities of the United Kingdom, resident in India.

(2) To provide a means of keeping in touch with the universities of the United Kingdom, by communication with the Federation of University Women, and otherwise as may seem expedient.

(3) To act as an organisation which shall afford opportunity for the expression of united opinion and for concerted action by university women on matters especially affecting them.

Membership is open only to those women who hold degrees in any university in the United Kingdom, or hold Oxford or Cambridge Honours Certificates. But as it was soon felt that a Society to include the many graduate women in India who have graduated elsewhere than in the United Kingdom, was desirable and could do useful work, a kindred association, to include Indian and colonial graduates, promptly sprang into existence in Bombay. This association is confined to Bombay Presidency and is known as the **Bombay Presidency Women Graduates' Union**.

Joint Secretaries:—Miss Schaeffer, Y. W. C. A., Bombay, and Miss Rustonjee, 162, Hornby Road.

The Association of University Women has four branches. The addresses of the Honorary Secretaries are as follows :—

Calcutta	.. Miss Kell, Diocesan College.
Bombay	.. Mrs. Houston, 41, Marine Lines
Allahabad	.. Mrs. Daniels, 11, Muir Road.
Delhi, Simla	.. Mrs. Moleworth, Penrose Hall, Simla.

The Delhi Branch only came into existence in 1918. The United Provinces Branch is somewhat scattered. The Calcutta and Bombay Branches are influential, and have repeatedly intervened with good effect to educate public opinion with regard to subjects affecting women. They

have, for instance, made investigations on behalf of the Education Department, Government of India, the Calcutta University Commission, etc. They have been the means of introducing women on to University Senates and Municipalities. The Calcutta Branch carried through an important exhibition of Food Products with the double object of discovering :—

(1) What were the exact resources of the country.

(2) How firms and individuals could be induced to develop these resources, to find substitutes for imported goods and to improve existing methods of preparation of indigenous food products.

The most valuable part of the work of the Association has been the establishment of **Women's Employment Bureaux** in Calcutta and Bombay. The work of mobilising women has been difficult in every country, not for want of good will on women's part but for want of machinery and organisation. The Association of University Women realised that, as the only body of educated Englishwomen in this country, it was called upon to provide the necessary organisation. Bureaux were formed and were the means of (1) helping many employers to get into touch with the available reserve of women labour; (2) showing trained women where their services were most needed and (3) training inexperienced workers who had nothing but their good will to offer. The Bureaux have been remarkably successful. In its last month's working, the Bombay Bureau was able to place as many as 40 per cent. of its fresh applicants, but in June 1918, it closed down as the National Service Bureau, a department of the War Purposes Board, Government of Bombay, was opened in order to mobilise more successfully the man-power of the Presidency.

As a means of promoting friendships between women from various parts of the United Kingdom, with widely differing tastes and interests and spheres of life in India, and as an instrument for affording opportunities for usefulness to educated women, the Association of University Women has a useful function to perform.

CONTROL OF COTTON CLOTH.

The circumstances which led to the passing of the Cloth Control Act were described in the last issue of the Indian Year Book. The Act became law on September 26th, 1918, and Mr. F. Noyce, I.C.S., who had previously been engaged in preliminary investigations, was immediately appointed Controller of Cotton Cloth under its provisions, with the assistance of an Advisory Committee of twelve members, of whom eight were mill-owners or mill agents from Bombay, Ahmedabad, Cawnpore and Madras. A fall in the price of cloth which, in August 1918, had reached the unprecedented height of Rs. 2-14-0 per pound in Bombay, had commenced when the intentions of Government in regard to Cloth Control were made public and had been accentuated by the announcement that a tax would be levied on excess profits, by a heavy fall in the price of raw cotton, by the prospects of peace and also by the diminished purchasing power of the people resulting from the influenza epidemic and the unfavourable agricultural conditions. The lowest price so far recorded since the passing of the Cloth Control Act was reached a few days after the signing of the Armistice on November 11th. The provisions of the Act were not, therefore, put formally into operation until the middle of January when the price of cloth had again reached Rs. 1-14-0 per pound. It had, however, been decided that the cloth to be standardized for the majority of the Provinces should be one of 20s. warp and 20s. weft, 32 reed and 32 picks. It is explained in the report recently issued by the Controller of Cotton Cloth that, as the cloth was intended for the poorest classes only, the reed and pick adopted for it were low and the cloth was consequently less closely woven and more open in appearance than the bulk of the cloth ordinarily manufactured by the mills. In order to meet the case of mills in Cawnpore and elsewhere which were only able to weave cloth of coarser counts and to provide a thicker cloth to suit the requirements of the Punjab and the adjacent provinces, it was also decided to provide a coarser cloth of 16s. warp and 14s. weft, 44 reed and 44 picks.

Standard Cloth :—Before the Act was brought into operation, 1,117 bales of standard and other cloth were supplied, mainly to Bihar and Orissa and the United Provinces. Two orders for standard cloth were placed with the mills, one at the end of January and one at the beginning of March. The output of 5 per cent. of the looms in each mill was taken up in both cases. In all, 9,651 bales of cloth were manufactured by 129 mills, 5,053 bales under the first order and 4,598 bales under the second order. This total is exclusive of 628 bales which were rejected. The price fixed for cloth of the first order was Rs. 1-7-6 per pound for shirting, Rs. 1-8-0 per pound for lhoties and Rs. 1-8-6 per pound for saris. That for cloth of the second order was two annas a pound less in all cases. Only shirting of the thicker quality was supplied and the prices fixed for this for the cloth of the two orders were Rs. 1-5-6 and Rs. 1-3-6 respectively. The "reasonable margin of profit" to the

millowners contemplated by the Act was placed at ten per cent.

Prices Fall :—Owing to the fall in the price of raw cotton and also the presence of standard cloth on the market, the price of ordinary cloth fell steadily from the commencement of the year until the end of April and the margin between the price of the latter and that of standard cloth practically vanished. In these circumstances, it was decided in the middle of April to place no further orders with the mills. The demand for the thicker cloth which had sprung up from the Punjab and the adjacent provinces was met as far as possible by obtaining standard and other cloth at favourable rates on a voluntary basis and 940 bales were obtained in this way for those Provinces and for Bengal, for which province a stock of cloth was required in order to prevent a possibility of profiteering during the Puja holidays. In all 11,708 bales of standard and other cloth were supplied, of which 4,274 bales were taken by the United Provinces, 3,905 bales by Bihar and Orissa, 2,079 bales by the Punjab, 461 bales by Bengal, 417 bales by Assam, 340 bales by the Central Provinces, 112 bales by Bombay, 61 bales by Baluchistan, 57 bales by the North-West Frontier Province, and one bale each by Delhi and Madras. This represented nearly 22½ million yards of cloth and the total amount paid for it to the mills amounted to Rs. 63,13,555. In spite of considerable fluctuations, the margin between the price of ordinary cloth and that at which it would have been possible to manufacture standard cloth continued from April onwards insufficient to justify the placing of fresh orders with the mills and the cloth operations were therefore closed down at the end of November 1919. The Cloth Control Act, however, remains in operation.

Agencies :—The agencies utilized for the sale of the cloth varied in the different Provinces. In the United Provinces, the cloth was disposed of at the outset by regular dealers in cloth who were selected in each district by the District officers. Their remuneration was fixed at 3½ per cent. for wholesale dealers and five per cent. for retail dealers. The dealers proved unequal to the work and the cloth was eventually taken over by District Boards and was also sold by Gazetted officers and Tahsildars with satisfactory results. Agents and retailers appointed on commission sale were also employed at the commencement in Behar and Orissa where also they proved a failure. A special agency working under the Provincial Controller was therefore substituted for them and effected an immediate improvement in sales which have since been satisfactory. In the Punjab, practically the whole of the cloth was disposed of very rapidly by co-operative societies. In the remaining provinces which took smaller quantities, the cloth was sold in the main by Government Officers, Municipalities or Local Boards.

The report shows that the indirect effects of the presence of standard cloth in stabilizing prices and in preventing any tendency to profiteer were great and beneficial.

The Church.

In the ordinary acceptance of the term there is no established Church in India. An Ecclesiastical Establishment is maintained for providing religious ministrations, primarily, to British troops, secondarily to the European civil officials of Government and their families. Seven out of the eleven **Anglican Bishops** in India are officers of the Establishment, though their episcopal jurisdiction far transcends the limits of the Ecclesiastical Establishment. The stipends of the three Presidency Bishops are paid entirely by Government, and they hold an official status which is clearly defined. The Bishops of Lahore, Lucknow, Nagpur and Rangoon draw from Government the stipends of Senior Chaplains only but their episcopal rank and territorial titles are officially recognised. The Bishops of Chota Nagpur, Tinnevely-Madura, Travancore-Cochin, Dornakal and Assam are not on the establishment. The new Bishopric of Assam was created in 1915. In its relations with Government it is subordinate to the see of Calcutta. But the maintenance of the Bishopric is met entirely from voluntary funds.

The **ecclesiastical establishment** includes four denominations—Anglican, Scottish, Roman and Wesleyan. Of these, the first two enjoy a distinctive position, in that the Chaplains of those denominations (and in the case of the first-named the Bishops) are individually appointed by the Secretary of State and rank as gazetted officers of Government. Throughout the Indian Empire there are 134 Anglican and 18 Church of Scotland chaplains whose appointments have been confirmed. The Roman Catholic and Wesleyans receive block-grants from Government for the provision of clergy to minister to troops and others belonging to their respective denominations. The Wesleyan Methodist Church has a staff of military chaplains in India who receive a fixed salary from Government and 25 chaplains working on a capitation basis of payment by Government. Churches of all four denominations may be built, furnished and repaired, wholly or partly at Government expense.

In the Anglican Communion a movement towards **Synodical Government** was making great progress, when, in the course of the year 1914, serious legal difficulties were encountered. The Bishops were advised that their relations with Canterbury and the Crown precluded the establishment of synods on the basis adopted by the Anglican Church in America, Japan, South Africa and other countries where it is not established by the State. It is stated that in course of time those relations may be modified so as to admit of the establishment of synodical government in India. Meanwhile Diocesan Councils are being adopted as a make-shift measure. These Councils possess synodical characteristics, but are devoid of any coercive power.

So far as the European and Anglo-Indian communities are concerned the activities of the Church are not confined to public worship and pastoral functions. The **education** of the children of those communities is very largely in the hands of the Christian denominations. There are a few institutions such as the La

Martiniere Schools, on a non-denominational basis; but they are exceptional. In all the large centres there exist schools of various grades as well as orphanages, for the education of Europeans and Anglo-Indians under the control of various Christian bodies. The Roman Catholic Church is honourably distinguished by much activity and financial generosity in this respect. Her schools are to be found throughout the length and breadth of the Indian Empire; and they maintain a high standard of efficiency. The Anglican Church comes next, and the American Methodists have established some excellent schools in the larger hill-stations. The Presbyterians are also well-represented in this field, particularly by the admirable institution for destitute children at Kalimpong, near Darjeeling. Schools of all denominations receive liberal grants-in-aid from Government, and are regularly inspected by the Education Departments of the various provinces. Thanks to the free operation of the denominational principle and its frank recognition by Government, there is no "religious difficulty" in the schools of the European and Anglo-Indian communities.

Christian Missions.

The tradition that St. Thomas, the Apostle was the first Christian missionary in India is by no means improbable. History, however, carries us no further back than the sixth century, when a community of Christians is known to have existed in Malabar. Since then the so-called **Syrian Church** in south-west India has had a continuous life. Except in its infancy this Church (or rather these Churches, for the Syrian Christians are now divided into four communions) has displayed little of the missionary spirit until quite recent times. Western Christianity was first introduced into India by the Portuguese, who established their hierarchy throughout their sphere of influence, Goa being the metropolitical see of the Indies. St. Francis Xavier, a Spaniard by race, took full advantage of the Portuguese power in Western India to carry on his Christian propaganda. His almost super-human zeal was rewarded with much success, but many of the fruits of his labour were lost with the shrinkage of the Portuguese Empire. It is really to the work of the missionaries of the **Propaganda** in the 17th century that the Papacy owes its large and powerful following in India to-day. The Roman Catholics in India number 1,904,006, of whom 379,251 were added during the decade 1901-1911. The total of "Syrian" Christians (exclusive of those who while using the Syrian liturgy, are of the Roman obedience) is 315,612, as against 248,741 in 1901. Protestant Christians (the term throughout this article includes Anglicans) number 1,636,731, an increase of 486,986 since 1901. Thus, the total number of Christians of all denominations in India is now close on four millions. In fact it probably exceeds that figure at the present moment, as these statistics are taken from the Census Report of 1911, and the rate of increase during the previous decade was nearly 100,000 per annum.

The Protestant Churches made no serious attempt to evangelise India till the beginning of the nineteenth century. They have thus been at work in the Indian mission field for something over 100 years, and the statistical results of their efforts are given above. It is now, however, generally recognised that Christian missions are producing indirect effects in India which lend themselves only incompletely to any sort of tabulation. The main agency of this more diffusive influence of Christianity is the missionary school and college. The **Protestant missions** fill a considerable part in the elementary education of the country. According to the *Year Book of Missions in India*, 1912, they are teaching 446,000 children in 13,204 elementary schools, mostly situated in villages. This represents one-ninth of the total of elementary schools and scholars throughout the Empire. The majority of children in these schools are non-Christians. The same is true also of the high schools and in a still greater degree of the colleges. The former number 283 with 62,600 male and 8,400 female pupils. There are 38 colleges affiliated to Universities, containing 5,488 male and 61 female students. Of these as many as 5,241 are non-Christians. From the standpoint of missionary policy much importance is attached to these agencies for the indirect propagation of the Christian faith. The statesman and the publicist are chiefly interested in the excellent moral effect produced by these institutions amongst the educated classes, and the higher educational ideals maintained by their staffs. The principal **University colleges** under Protestant auspices are the Madras Christian College; the Duff College, Calcutta; the Wilson College, Bombay; and the Foreman College, Lahore. All these are maintained by Presbyterian societies, either British or American. The Roman Catholics have a large number of educational institutions, ranging from small village schools to great colleges preparing students for University degrees. But the proportion of Christian students in their institutions is very much larger than in those of the Protestant bodies. The proportion of literates amongst native Roman Catholics is probably lower than amongst the Protestant converts; but compared with Hindus and Mahomedans it is conspicuously higher. The Roman Catholics have some 3,000 elementary schools in which 98,000 boys and 41,000 girls are receiving instruction. In middle and high schools they have 143,000 boys and 73,000 girls and in University colleges about 5,000 students of both sexes. These figures, however, include a large proportion of Europeans and Eurasians, who are an almost negligible quantity in Protestant mission schools and colleges.

More recent, but producing even more widespread results, is the **Philanthropic work** of Christian missions. Before the great famine of 1878, missionaries confined themselves almost exclusively to evangelistic and educational activity. The famine threw crowds of destitute people and orphan children upon their hands. Orphanages and industrial schools became an urgent necessity. But the philanthropic spirit is never satisfied with one kind of organisation or method. A great

stimulus was also given to medical missions. **Hospitals and dispensaries** have sprung up in all parts of the mission field; and leper asylums are almost a monopoly of Christian missionary effort. In 1911 the total number of medical missionaries working under Protestant societies in India was 118 men and 217 women, the majority of the former being also ordained ministers of religion. There are 184 industrial institutions in which 59 different arts and crafts are taught, ranging from agriculture to type-writing. In this department the **Salvation Army** hold a prominent place; and the confidence of Government in their methods has been shown by their being officially entrusted with the difficult work of winning over certain criminal tribes to a life of industry. The indirect effect of all this philanthropic activity under missionary auspices has been most marked. It has awakened the social conscience of the non-Christian public, and such movements as "The Servants of India" and the mission to the Depressed Classes are merely the outward and visible sign of a great stirring of the philanthropic spirit far beyond the sphere of Christian missionary operations.

Anglican Missionary Societies.

The Church Missionary Society carries on work in India in seven different missions—the United Provinces, South India, Travancore and Cochin, Bengal, Western India, Punjab and Sind and the Central Provinces and Rajputana. The names are in order of seniority. Work was begun in what are now called the United Provinces in 1813, in Bombay in 1820, in the Punjab in 1851, and in the Central Provinces in 1854. The Society has always kept Evangelistic work well to the fore; but it also has important medical missions, especially on the N.-W. Frontier, and many schools of the Primary, Middle and High standards. The Church of England Zenana Missionary Society is an offshoot of the C. M. S. controlling the work of 162 missionary ladies. The number of ordained European missionaries of the C. M. S. in India and Ceylon is 160, European laymen 30 and European laywomen 258. The Society claims a Christian community of 2,21,359 of whom 63,655 are adult communicants.

Society for the propagation of the Gospel. Statistics of the work of this Society are not easily ascertained, as much of it is done through Diocesan institutions, which, while financed and in many cases manned by the S. P. G., are entirely controlled by the Diocesan authorities. The best known of the S. P. G. missions is that at Delhi, commonly called the Cambridge Mission to Delhi, carrying on educational work at St. Stephen's College and School. At the College there are about 200 students under instruction, and at the High School 800. The College hostels accommodate 100 students. Missions to the depressed classes exist in Burma, in the Ahmednagar District and in several parts of South India, especially in the Diocese of Tinnevely-Madura. There are 1,16,000 Indian Christians under the aegis of the S. P. G.; 90 ordained European missionaries and 98 European lady workers.

Other Anglican Societies.—The Oxford Mission to Calcutta was started in 1880

It works in the poorest parts of Calcutta and also at Barisal. There are 11 missionaries of this Society, and 16 Sisters. In addition to its work amongst the poor, the Oxford Mission addresses itself to the educated classes in Bengal and issues a periodical called *Epiphany*, which is known all over India.

The Society of St. John the Evangelist (commonly known as the Cowley Fathers) has houses at Bombay and Poona, and small stations in the Bombay Konkan. In Bombay its missionary work centres round the Church of Holy Cross, Umarkhadi, where there is a school and a dispensary. The Christians are chiefly drawn from the very poorest classes of the Bombay

population. At Poona the Society co-operates with the Wantage Sisters and in Bombay with the All-Saints Sisters. Other Anglican sisterhoods represented in India are the Clewer Sisters at Calcutta and the Sisters of the Church (Kilburn) at Madras. The St. Hilda's Deaconesses' Association of Lahore carries on important educational work (chiefly amongst the domiciled community) in the Punjab. The mission of the Scottish Episcopal Church at Nagpur, the Dublin University Mission at Hazaribagh, and the Mission of the Church of England in Canada working at Kangra and Palampur (Punjab) should also be mentioned under the head of Anglican Missions.

Bengal Ecclesiastical Department.

Westcott, The Right Reverend Foss, D.D. Lord Bishop of Calcutta and Metropolitan of India.

Henry, Rev. W. E. Charles	On leave.

And 19 Junior Chaplains.

United Provinces Ecclesiastical Department.

Westcott, The Right Reverend George Herbert	Lord Bishop of Lucknow.
Chapman, The Ven'ble Percy Hugh, M.A., LL.D.	Archdeacon of Lucknow.
Pearson, H. G., Bar.-at-Law	Registrar of the Diocese of Lucknow. (On leave.)
Langford James, J. W...	Officiating Registrar of the Diocese of Lucknow.

SENIOR CHAPLAINS.

Canney, Rev. Duncan Arnold	On leave.
Menzies, Rev. Henry, M.A.	Landaur.
Ninis, Rev. Richard Duncan	Chanbattia.
Smith, Rev. H. T. P.	On Combined leave.
Bell, Rev. William Lachlan, M.A.	Benares.
Kitching, Rev. W. L. W.	Chakrata.
Molony, Rev. Percival John	Ranikhet.
Irwin, Rev. Benjamin Christopher Bultee, M.A.	Meerut.

And 15 Junior Chaplains with 6 Additional Clergy

CHURCH OF SCOTLAND.

Two Junior Chaplains.

THE ROMAN CATHOLIC CHURCH.

With regard to numbers, the *Catholic Directory of India*, 1913, gives the following discrepant tables:—

	Civil Census, 1911.	Ecclesiastical Estimate.
British India		
{ Latin rite	1,430,582	1,535,820
{ Syriac rite	413,142	364,660
<i>Total, British India and Prot. States</i>	1,843,724	1,900,480
Burma	60,282	88,447
Ceylon	339,300	322,163
<i>Total, India, Burma and Ceylon</i>	2,243,306	2,311,090
French India	25,918
Portuguese India	296,148
Ecclesiastical Grand Total	2,663,156*

* After trying to rectify discrepancies the *Directory* fixes as probable the following numbers:—
 European and Anglo-Indian Catholics 114,512
 Baptised Indian Catholics 2,423,286
Total 2,537,798

The Catholic community as thus existing is composed of the following elements:—

- (1) The "Syrian" Christians of the Malabar Coast, traditionally said to have been converted by the Apostle St. Thomas. They were brought under allegiance to the Pope by the Portuguese in 1599, and placed first under Jesuit bishops and then under Carmelite Vicars Apostolic. They are at present ruled by four Vicars Apostolic of their own Syriac rite.
- (2) Converts of the Portuguese missionaries from 1500 and onwards, starting from Goa and working in the south of the peninsula and up the west coast, Ceylon, Bengal, etc.
- (3) European immigrants at all times, including British troops.
- (4) Modern converts from Hinduism and Animism in recent mission centres.

The Portuguese mission enterprise starting after 1500, continued for about 200 years, after which it began to decline. To meet this decline fresh missionaries were sent out by the Congregation *de propaganda fide*, till by the middle of the 19th century the whole country was divided out among them except such portions as were occupied by the Goa clergy. Hence arose a conflict of jurisdiction in many parts between the Portuguese clergy of the "padroado" or royal patronage, and the propaganda clergy. This conflict was set at rest by the Concordat of 1886. At the same time the whole country was placed under a regular hierarchy, which after subsequent adjustments now stands as follows:—

Of the Portuguese Jurisdiction:—

The archbishopric of Goa (having some extension into British territory) with suffra-

gan bishoprics at Cochin; Mylapore and Damaun (all three covering British territory).

Of the Propaganda Jurisdiction:—

The archbishopric of Agra with suffragan bishoprics of Allahabad and Rajputana and the Prefecture Apostolic of Bettiah.

The archbishopric of Bombay, with suffragan bishoprics of Poona, Mangalore and Trichinopoly.

The archbishopric of Calcutta, with suffragan bishoprics of Dacca and Krishnagar, and the Prefecture Apostolic of Assam.

The archbishopric of Madras, with suffragan bishoprics of Hyderabad, Vizagapatam and Nagpur.

The archbishopric of Pondicherry (French) with suffragan bishoprics of Mysore, Coimbatore and Kumbakonam.

The archbishopric of Simla with suffragan bishopric of Lahore and the Prefecture Apostolic of Kashmere.

The archbishopric of Colombo (Ceylon) with suffragan bishoprics at Kandy, Galle, Jafna and Trincomalee.

The archbishopric of Verapoly, with suffragan bishopric of Quilon.

Four Vicariates Apostolic of the Syriac rite for the Syrian Christians of Malabar.

Three Vicariates Apostolic of Burma.

The European clergy engaged in India almost all belong to religious orders, congregations or mission seminaries, and with a few exceptions are either French, Belgian, Dutch; Swiss, Spanish or Italian by nationality. They

number about 1,000 besides which there is a body of secular clergy mostly native to the country, numbering about 2,000 and probably about 2,000 nuns. The first work of the clergy is parochial ministrations to existing Christians, including railway people and British troops. Second comes education, which is not confined to their own people; their schools being frequented by large numbers of Hindus, Mahomedans, Parsis, etc. Among the most important institutions are St. Xavier's College, Calcutta, St. Peter's College, Agra, St. Xavier's College, Bombay, St. Joseph's College, Trichinopoly, St. Aloysius College, Mangalore, teaching university courses; besides a large number of high schools and elementary schools. The education of girls is supplied for by numerous convent schools worked by religious congregations of nuns to say nothing of orphanages and other charitable institutions. The total number under education amounted in 1904 to 143,051 boys and 73,164 girls, later figures being unavailable. As to missionary work proper, the country is covered with numerous mission centres,

among which those in Chota Nagpur, Gujerati Orissa, the Nizam's Dominions, the Ahmednagar district and the Telugu coasts may be mentioned. (Full particulars on all points will be found in the Catholic Directory already quoted.) The mission work is limited solely by shortage of men and money, which if forthcoming would give the means to an indefinite extension. The resources of the clergy after the ordinary church collections and pay of a few military and railway chaplaincies are derived mainly from Europe, that is, from the collections of the *Society for the Propagation of the Faith* and of the *Holy Childhood*; helped out by private or other donations secured from home by the different local missionaries. In mission work the fathers count as enrolled only those who are baptised and persevering as Christians, and no baptism, except for infants or at point of death, is administered except after careful instruction and probation. This, while keeping down the record, has the advantage of guaranteeing solid results.

THE SCOTTISH CHURCHES.

The Church of Scotland.—The Chaplaincy work of the Church of Scotland dates from 1814, when the Rev. Dr. Bryce landed in Calcutta; and organised a congregation of his Scottish fellow countrymen. Since 1903 there have been eighteen chaplains on the staff, of whom nine belong to the Bengal Presidency, five to Bombay, and four to Madras. These minister both to the Scottish troops and to the civil population of the towns where they are stationed, but when there is a Scottish regiment the chaplain is attached to the regiment, instead of being posted to the station where the regiment happens to be placed and as a rule moves with the regiment. There are three Presidency senior Chaplains in charge of Bengal, Bombay, and Madras respectively. There are churches in the chief towns of the Presidencies, and churches have also been built, or are being built, in all considerable military stations, e.g., Chakrata, Lucknow, Peshawar, Ranikhet, Rawalpindi, Sialkot and Umballa. In addition to the regular establishment there are a number of acting Chaplains sent out by the Colonial Committee of the Church of Scotland, and these are serving in such stations as Rawalpindi, Cawnpore, Meerut, Mhow, and Quetta. The Additional Clergy Societies in India contribute towards the cost of this additional establishment. In other places such as Sialkot, Murree, Dalhousie, Darjeeling and Lahore, regular services are provided by Scottish Missionaries. Simla has a minister of its own sent out from Scotland.

The Mission work of the Church of Scotland dates from 1829, when Alexander Duff, one of the greatest of modern missionaries, was sent to Calcutta. He was the first to open schools where English was made the medium for instruction, and where religious teaching was given daily. Similar educational missions were soon afterwards started in Bombay and Madras. Educational work is still an important branch of the mission work of the Church, but the Bombay College was closed in 1891,

and in 1907 the College in Calcutta was united with the College of the United Free Church of Scotland, to form the "Calcutta Christian College." In the Punjab Evangelistic work is being carried on from eight centres under seventeen missionaries. The baptised Christian community now numbers almost 13,000. Work commenced in Darjeeling in 1870 is now carried on throughout the whole Eastern Himalayan district, and there is a Christian community there of over six thousand. In the five mission districts of Calcutta, the Eastern Himalayas, Madras, Poona, and the Punjab there were at the end of 1915 over 21,000 baptised Indian Christians. In connection with these missions the Women's Association of Foreign Missions does invaluable service in school, medical and zenana work, having in India 48 European missionaries, 145 teachers, over 50 schools, three hospitals and six dispensaries.

The Church of Scotland has also done much to provide education for European children in India. Together with the United Free Church St. Andrew's Church provides the governing body of the Bombay Scottish High Schools, which have always held a high place among such institutions, and exercises pastoral supervision over the Bombay Scottish Orphanage. In Bangalore there is the St. Andrew's High School, and both in Bangalore and in Madras the local congregation supports a school for poor children. The now well-known St. Andrew's Colonial Homes at Kalimpong, Bengal, though not directly part of the work of the Church of Scotland, were initiated by and are being locally managed by Missionaries of that Church. The homes exist for the benefit of the domiciled European Community, and are doing magnificent work. There are now fifteen cottages, and 437 children in residence. Further information may be found in "Reports of the Schemes of the Church of Scotland," Blackwood & Sons; "The

Church of Scotland Year Book" and "The Handbook of the Church of Scotland in India and Ceylon."

The United Free Church of Scotland.—This branch of the Scottish Church has only three purely European congregations in India, two in Calcutta, Wellesley Square, and Howrah and one in Bombay, Waudby Road. In Calcutta the Howrah Church is in the district of the mills, and every effort is made to minister to the Scottish Engineers and other workers in the mills. As noted above members of these congregations co-operate with the Established Church of Scotland in providing education for European children.

The Mission work of the Church is extended and varied. It is carried on in seven centres—in Bengal; in Santalia, with five stations; in Western India, including Bombay, Bombay District and Poona; in Hyderabad State including Jalna and Bethel; in Madras, with four stations; in the Central Provinces, including Nagpur, Nagpur District, Bhandara, Wardha and Amraoti; and in Rajputana where since 1860 missions have been established in eleven districts.

There are at work in these centres 212 Scotch missionaries, together with a native staff of 311. Of organised Indian congregations there are 41, comprising 4,813 communicant members, and representing a Christian community of 13,749. Of schools there are 336 with 815 teachers and 14,494 scholars. A large part of this work is organised and supported by the women of the Church who have sent out as many as 81 of these missionaries. In connection with the medical work of the mission there are 19 hospitals where in the year 480,090 out-patients and 8,435 in-patients are treated, all of whom are brought under Christian instruction. There are four great missionary Colleges. There is the Madras Christian College, with 839 students which reached its great success under the wise leadership of the Rev. Dr. William Miller, and which is now contributed to by five other Missionary Societies as well as that of the United Free Church. Representatives of these Missions, which include the C. M. S. and the Wesleyan Missionary Society, sit upon the College Board. There is the Scottish Churches College in Calcutta, with over 1,152 students, the Hislop College at Nagpur with 505 students, and the Wilson College in Bombay with 1,047 students.

BAPTIST SOCIETIES.

THE BAPTIST MISSIONARY SOCIETY OF GREAT BRITAIN.—Formed in 1792, largely through the efforts of Dr. Wm. Carey, operates mainly in Bengal, Bihar, the United Provinces, the Punjab, and Ceylon. The Baptist Zenana Mission has recently been united with this Society. The staff of the united Mission numbers 255 missionaries and about 1,000 Indian workers. Connected with the Society are 228 Indian Churches, 285 Day Schools, 19 Middle and High Schools, and 6 Theological Training Colleges. The Church membership at the close of 1918 stood at 14,697 and the Christian Community at 39,146. In the methods of the Society, the chief place is given to Bazaar and Village preaching. Increase in membership during the past ten years, about 60 per cent. and in the community 50 per cent. for the same period. Amongst the non-caste people great progress has been made in recent years, and Churches formed from amongst these peoples are self-supporting.

Special work amongst students is carried on in Calcutta, Dacca, Bankipore, Cuttack and Delhi, where Hostels have been erected for the prosecution of this form of work.

EDUCATIONAL WORK.—Ranges from Primary School to Colleges. Serampore College, the only College in India able to bestow a theological degree granted under Royal Charter by His Danish Majesty in 1827, and confirmed by the British Government in the Treaty of purchase of the Settlement of Serampore in 1845, and placed in 1856 by the College Council at the disposal of the Baptist Missionary Society to become a part of its Missionary Educational operations, Arts and

Theological. It was affiliated in 1857 to the newly-formed Calcutta University; reorganised in 1910 on the lines of its original foundation with the appointment of a qualified Theological Staff on an Interdenominational basis for the granting of Theological Degrees to qualified students of all Churches.

As the only College in India granting a Theological Degree a large number of students are now resident in the splendid College Buildings. In Arts, the College prepares for the Calcutta Arts Examinations. *Principal*: Rev. G. Howells, M.A., B.D., B.LITT., PH. D.

A Vernacular Theological Institute, and High School likewise attaches to Serampore, as also at Delhi and Cuttack, for the training of native preachers.

There are 9 or 10 purely English Baptist Churches connected with the Society, but English services are carried on in many of the stations where an European population obtains. Medical work connected with the Society reported 5 Hospitals, 8 Dispensaries, and about 39,000 out-patients for the year 1918. Two large Printing Presses for both English and Vernacular work are conducted at Calcutta and Cuttack. The Officiating Secretary of the Mission is the Rev. T. W. Norledge, 48, Ripon Street, Calcutta.

WOMEN'S MISSIONARY ASSOCIATION, B.M.S.—Extends over the same area practically as the above. The Indian General Secretary of the Women's Missionary Association of the Baptist Missionary Society is Miss Augus, 44, Lower Circular Road, Calcutta. .

THE CANADIAN BAPTIST MISSION.—Was commenced in 1873, and is located in the Eastern Telugu District to the north of Madras, in the Kistna, Godavari, Vizagapatam, and Ganjam Districts. There are 22 stations and 180 out-stations with a staff of 88 missionaries, including 7 qualified physicians, and 725 Indian workers, with Gospel preaching in villages. Organised Churches number 74, communicants 11,031 and adherents 20,409 for the past year. Thirteen Churches are entirely self-supporting. In the Educational department are 279 village Day schools, with 9,580 children, 11 Boarding schools, 2 High schools, a Normal Training school, a Theological Seminary providing in all for 700 pupils, and an Industrial school. There are 6 Hospitals and two leper asylums. The Mission publishes a Telugu newspaper. Village Evangelisation is the Central feature of the Mission, and stress is laid upon the work amongst women and children in particular. During the last decade membership has increased by 52 per cent., the Christian Community by 50 per cent., and scholars by 500 per cent. The Indian Secretary is the Rev. A. A. Scott, Tuni, Godavari District.

THE AMERICAN BAPTIST TELUGU MISSION.—Was commenced in the year 1836, and covers large parts of Nellore, Guntur, Kistna, and Kurnool Districts, and parts of the Deccan. Its main work is evangelism, but there is large Educational and Medical work in addition. There is an English Church in Madras. A large industrial Yerukala settlement is carried on at Kavali under the charge of one of the missionaries. Organized Telugu Churches, number 176, with 72,178 baptised communicants. There has been a net increase of 1,000 per annum for the past twenty years. There are 108 Missionaries and 2,051 Indian Workers. There is a large Theological Seminary at Ramapatnam for the training of Indian preachers and a Bible School at Vinukonda for training Bible Women. In ordinary educational work 848 primary schools, 26 Boarding Schools, 4 High Schools, 3 Training Schools and 1 Theological Seminary give training to 24,362. In Medical work 6 Hospitals report 2,187 in-patients and 19,583 out-patients for the year.

Secretary: A. M. Boggs, Narasaravupet, Guntur District.

AMERICAN BAPTIST FOREIGN MISSION SOCIETY, organized in 1814, has Missions in Burma begun 1814; Assam 1836; Bengal and Orissa 1836; South India 1840. It owes its rise to the celebrated Adoniram Judson. Until 1910 the Society was known as the American Baptist Missionary Union. There are 31 main stations in Burma, 13 in Assam, 10 in Bengal and Orissa, 29 in South India, besides hundreds of out-stations. All forms of missionary enterprise come within the scope of the Society.

The missionary staff numbers 401 in all, with an Indian workers' staff of 4,834. Communicants number 164,801. Organized churches number 1,359 of which 860 are self-supporting. Educational work is conducted on a large scale, the total number of schools of all grades being 1,952 with over 65,000 pupils. The Christian College has 74 students in college classes. There are ten High Schools with 3,562 pupils.

Medical work embraces 13 Hospitals and 35 Dispensaries, in which 78,020 out-patients and 1,832 in-patients were treated last year.

Indian Christians contribute annually more than Rs. 1,40,000 for religious and benevolent work within the Mission.

The great work of the Mission continues to be evangelistic and the training of the native preachers and Bible-women, and extends to many races and languages, the most important of which, in Burma, has been the practical transformation of the Karens, whose language has been reduced to writing by the Mission. The work in Assam embraces 9 different languages, and large efforts are made amongst the employers on the tea plantations. The Mission Press at Rangoon is the largest and finest in Burma.

Assam Secretary, F. W. Harding, Tura, Assam.

Burma Secretary, Rev. H. J. Marshall, Tharrawaddy, Burma.

Bengal and Orissa Secretary, Rev. Harold I. Frost, Balasore, Orissa.

South India (or Telugu) Secretary, Rev. A. H. Curtis, Bapatla, Guntur District.

THE TASMANIAN BAPTIST MISSION.—With 3 missionaries, is established at Siragunge, E. Bengal.

Secretary: Rev. E. T. Thompson, Mission House, Siragunge.

THE AUSTRALIAN BOARD OF BAPTIST FOREIGN MISSIONS.—Embracing the societies representing the Baptists of the States of the Australian Commonwealth. The field of operations is in East Bengal. The staff numbers 38 Australian workers. There are 1,484 communicants and a Christian community of 3,362.

Secretary Field Council: Rev. Hedley Sutton, M.A., Mission House, Mymensingh.

THE STRICT BAPTIST MISSION.—Has 11 Missionaries, and 95 Indian Workers in Madras, W. and the Salem District. Communicants number 200; organised Churches 4; Elementary schools 32, with 1,500 pupils.

Secretary: Rev. E. A. Booth, Kihpauk, Madras, W.

AMERICAN BAPTIST, BENGAL-ORISSA MISSION commenced in 1836. Area of operation, Midnapore and Balasore districts of Lower Bengal. Mission staff 32, Indian workers 264. One English Church and 24 Vernacular Churches, Christian Community 5,000. One hospital and two dispensaries. Educational: One Theological and one High School, and 150 Elementary schools, pupils 4,880. Two Industrial schools for weaving and carpentering, &c. The Vernacular Press of this mission printed the first literature in the Santali language.

Secretary: Rev. Harold I. Frost, Balasore, Orissa.

PRESBYTERIAN SOCIETIES.

THE IRISH PRESBYTERIAN CHURCH MISSION.—Operates in Gujerat and Kathiawar with a staff of 30 Missionaries of whom 2 are qualified doctors and an Indian staff of 479 including school teachers. There are 10 Organised Churches, a communicant roll of 1,626, and a Christian community of 6,342. In Medical work there are 3 Hospitals, 5 Dispensaries, with 738 in-patients and 15,426 out-patients. The Mission conducts 3 High schools, 1 Anglo-Vernacular school, and 128 vernacular schools affording tuition for 6,507 pupils, 4 Orphanages, a Divinity College at Ahmedabad, a Teachers' Training College for men, a Teachers' Training College for women, both at Ahmedabad, and a Mission Press at Surat. The Mission has made a speciality of farm colonies, of which there are about a score in connection with it, most of them thriving.

The Jungle Tribes Mission with 4 missionaries is a branch of the activities of the above, working in the Panch Mahals and Rewa Kantha districts, with farm colonies attached.

Secretary: Rev. H. Martin, B.A., Mission House, Anand.

THE UNITED PRESBYTERIAN CHURCH OF NORTH AMERICA. The Sialkot Mission of the above Church was opened at Sialkot, Punjab, in 1855. It is now carrying on work in eight districts of the province. Its missionaries number 73, and its Indian workers 767. Its educational work comprises one Theological Seminary, one College, five High Schools, one Industrial School, eight Middle Schools, and 193 Primary Schools. The total enrolment in all schools was 13,575 in 1918. The Mission is also carrying on Medical work through four hospitals and eight dispensaries. The total Christian Community in connection with the Mission is 59,098.

Secretary: Rev. J. A. McConneelee, D. D., Gujranwala, Punjab.

THE AMERICAN PRESBYTERIAN MISSION operates in 3 main sections known as the Punjab, North India and Western India Missions. The American Staff numbers 209 and Indian Staff 1,347. There are 31 main stations and 132 out-stations. Organized churches number 64, 20 of which are self-supporting. There are 10,758 communicants and a total baptized community of 74,672. Educational work as follows: 3 Christian Colleges, and an interest in two other Colleges for women; students 1,288; Theological Schools 2, students 45; Training Schools for village workers 2, High Schools 14, pupils 1,017, Industrial Schools 6, pupils about 150; Agricultural Demonstration Farms 4, students about 130; Teachers' Training Departments 8, students about 100; Medical students at Miraj 56, Elementary Schools 223; Schools of all grades 268; pupils 12,911. Medical Work: Hospitals 6; Dispensaries 13. Sunday Schools 335 with 12,132 pupils. Contributions for Church and Evangelistic work on the part of the Indian Church Rs. 29,361.

The Hospital at Miraj, under the care of Dr. W. J. Wanless and Dr. C. E. Vail is well known throughout the whole of S. W. India, and the Forman Christian College at Lahore under the principalship of Rev. E. D. Lucas, D.D., is equally well-known and valued in the Punjab. The Ewing Christian College (Dr. C. A. R. Janvier, Principal) is growing rapidly and its agricultural department has become increasingly prominent. Woodstock College for Women at Mussoorie, Principal Rev. E. E. Fife, D. D., is one of the largest and most valuable institutions of this description in Northern India.

Secretary of Council of A.P. Missions in India: Rev. J. C. R. Ewing, D. D., LL. D., Litt. D., C.I.E., Lahore.

Secretary, Punjab Mission: Rev. F. J. Newton, Moga.

Secretary, North India Mission: Rev. R. C. Smith, Fatehpur, Haswa.

Secretary, Western India Mission: Rev. H. K. Wright, B.A., Vengurla.

THE NEW ZEALAND PRESBYTERIAN MISSION.—Commenced as recently as 1910 at Jagadhri, Punjab.

Secretary: Miss A. E. Henderson, Jagadhri.

THE CANADIAN PRESBYTERIAN MISSION.—Commenced in 1877, has 14 main Stations in the Indore, Gwalior, Rutlam, Dhar, Alirajpur, Jaora, Sitamau, Banswara, &c. Native States—The Mission staff numbers 75, Indian workers 238, Organized Churches 13, Communicants (September 30, 1918) 1,160, Baptised non-communicants 2,494, Unbaptised infants and catechumens 193. Total Christian Community 3,859; Educational work comprises Elementary and Middle Schools, High Schools for boys and girls, College, Theological Seminary and Classes. Industrial teaching and work are done in three Girls' Orphanages, in the Women's Industrial Home, and at Rasal-pura which last includes the Mission Press and the School for the Blind. The Medical work is large, chiefly among women.

Secretary: Rev. J. Fraser Campbell, D.D., Rutlam C. I.

THE WELSH CALVINISTIC METHODIST MISSION (OR WELSH PRESBYTERIAN MISSION) established in 1840 with a staff of 32 Missionaries, 600 Native workers, occupies stations in Assam in the Khassia and Jaintia Hills, the Lushai Hills and at Sylhet and Cachar. The Khassia language has been reduced to writing, the Bible translated, and many books published in that language by the Mission. Communicants number 14,000, the total Christian community 42,000; organised Churches 450; self-supporting Churches 30. Elementary schools number 510, scholars 15,000; Boarding schools 3, scholars 820, in addition to 1 Industrial school, 4 Training institutions and 1 Theological Seminary. Two Hospitals and 3 Dispensaries provided for 10,000 patients in 1914.

Secretary: Rev. J. Ceredig Evans, Shillong.

THE ARCOT MISSION of the Reformed Church in America (Dutch), organised in 1853 occupies the Arcot and Chittoor districts in S. India with a staff of 29 Missionaries, and 504 Indian ministers and workers. Churches number 19, Communicants 3,936, total Christian community 11,298; Boarding schools 11, scholars 528; Theological school 1, students

37; High schools 4, scholars 1,219; Training schools 2, students 44; Industrial schools 2, pupils 95; Elementary schools 181, scholars 6,945. Three Hospitals, 7 Dispensaries with staff of 38, provided for 2,217 in-patients and 82,052 out-patients for the past year.

Secretary: Rev. H. J. Scudder, M.A., & B.D. Punganur, S. India.

CONGREGATIONAL SOCIETIES.

THE AMERICAN BOARD OF COMMISSIONERS FOR FOREIGN MISSIONS.—Has two large Missions, the American Marathi Mission, and the Madura Mission. The Marathi Mission includes a large part of the Bombay Presidency, with centres at Bombay, Ahmednagar, Satara and Sholapur, and was commenced in 1813, the first American Mission in India. Its activities are large and varied. The staff at the beginning of 1919 consisted of 45 missionaries and 655 Indian workers operating in 152 outstations exclusive of Bombay City. Organised Churches number 66 with 8,331 communicants, and 6,939 adherents. There is a Leper work at Sholapur. The Educational work embraces 14 training and secondary schools, with 800 pupils and 179 primary schools, with 6,397 pupils, three-fifths of whom are non-Christians. A large Theological Seminary at Ahmednagar trains for the Indian Ministry. Zenana work and Industrial work are vigorously carried on, the latter embracing carpentry, metal hammering, lace work, carpet weaving and extensive work on an improved hand loom. A school for the blind is conducted on both Educational and Industrial lines. 51,973 patients were treated in the Hospitals and Dispensaries of the Mission last year. The Mission has for 70 years published the "Dnyanodaya," the only combined English and Marathi Christian weekly newspaper. Special evangelistic work is carried on amongst the tribes known as the Bhills and Mangs. This Mission was the first to translate the Christian Scriptures into the Marathi tongue. At Sholapur, a settlement for Criminal Tribes is carried on, under the supervision of Government. *Secretary:* Rev. William Hazen, Byculla, Bombay.

THE MADURA MISSION.—In the S. Madras District, commenced in 1834, has a staff of 49 missionaries and 897 Indian workers, operates in the Madura and Ramnad districts and has a communicant roll of 9,350 with 27,210 adherents and 33 organised churches, many of which are entirely self-supporting and self-governing. Schools number 240 with 13,491 pupils. There is a Christian College at Madura, as also Hospitals for men and women; at Pasumalai are a High School, Theological Institution, Industrial School, Teachers' Training School and Printing Press. The Secretary of the Marathi Mission is the Rev. A. H. Clark, Ahmednagar; and of the Madura Mission, the Rev. C. S. Vanghan, Manamadura.

The Arcot Mission commenced under the American Board was transferred to the Reformed Church of America in 1851.

THE SCANDINAVIAN ALLIANCE MISSION OF NORTH AMERICA.—Embraces two Branches, one in Bengal and the other in Khandesh. The total mission staff is represented by 10 missionaries and 27 Indian workers. There are 62 communicants and a Christian community of 158. Ten Elementary Schools provide for 160 pupils.

Secretaries: Rev. O. A. Dahlgren, Navapur, Khandesh, and Miss H. Abrahamson, Domar, Bengal. The Branch in Khandesh co-operates with the Swedish Alliance Mission, and both missions having a united yearly conference.

THE SWEDISH ALLIANCE MISSION.—Working among the Bhills in West Khandesh has 19 missionaries and 37 Indian workers. There are 5 congregations with a total membership of 502, of whom 189 are communicants. There are 10 Elementary Schools, and 2 Boarding Schools. The pupils in Aid Schools are 355.

Secretary: Miss. Emma Johanson, Nandurbar West Khandesh.

THE SCANDINAVIAN ALLIANCE MISSION, HIMALAYAS.—(Finnish Branch). The total mission staff is represented by six missionaries and twelve native workers. There are about 100 Communicants, five churches and a Christian community of about 120. One Orphanage with 15 orphans, one Kindergarten school, one Middle School and two Day schools.

Acting Secretary: Miss Kronguist, Lachung via Gangtok, Sikkim.

THE LONDON MISSIONARY SOCIETY.—Commenced work in India in 1793 and occupies 10 centres in N. India, 12 in S. India and 7 in Travancore. The Mission engages in every form of Missionary activity. The European staff numbers 223, Indian workers 2,004; Organised Churches 490; Communicants 13,748 and Christian community 116,575. There are 4 Christian Colleges, students 159; 3 Theological Institutions, students 41; 4 Training Institutions, pupils 114; 22 High schools, pupils 4,849; 25 Boarding schools, scholars 1,167; 9 Industrial schools, pupils 116 and 862 Elementary schools with 36,775 scholars. In Medical work Hospitals number 15, Dispensaries 15, qualified doctors 10, and 3,997 in-patients and 130,220 out-patients for the year.

The main centres of the Mission in N. India are at Calcutta, Benares and Almora. The Bhowanipur Institution at Calcutta is now a Teacher Training College. Evangelistic work is carried on amongst the thousands of pilgrims visiting Benares, and Almora is noted for its

Hospital and Leper Asylum. Special efforts are made amongst the Nama Sudras and the aboriginal tribes known as the Majhwars, Cheros and Pankas. The S. India district is divided into the Kanarese, Telugu and Tamil areas, with 12 stations and 472 outstations. At Nagercoil, (Travancore) is the Scott Memorial College with 985 students, a Church and congregation

said to be the largest in India, and a large Printing Press, the centre of the S. Travancore Tract Society.

N. India Secretary: Rev. J. H. Brown, B.A., B.D., Calcutta.

S. India Secretary: Rev. E. P. Rice, B.A., Bangalore.

ALL-INDIA MISSIONS.

THE CHRISTIAN AND MISSIONARY ALLIANCE—Dates from the year 1893 under the name of the International Missionary Alliance, but a number of its missionaries were at work in Berar Province much earlier. The work is confined to the provinces of Berar, Khandesh and Gujerat. There is a staff of 72 missionaries and 132 Indian workers. The number of Mission stations is 19, with additional outstations. There is a Christian community of 2,870 people. There are 4 orphanages, 2 for boys and 2 for girls; 3 training schools for Indian workers, and 1 English congregation at Bhusawal. *Secretaries:* for Gujerat: Rev. J. N. Culver, Viramgam, Gujerat; for Berar and Khandesh: Rev. S. H. Auernheimer, Malkapur, Berar.

THE CHURCH OF THE BROTHERS (AMERICAN)—Opened work in 1895, and operates in the Southern part of Gujerat, Khandesh, and Thana Districts. Its staff numbers 29 including missionaries' wives, and 105 Indian workers. The baptised (immersed) membership stands at 1,125; education is carried on in 2 Girls' Boarding schools, 4 Boarding schools for boys, and 81 Village Day schools. Industrial work is connected with four of the schools, and a Farm Colony is established at Umballa.

THE POONA AND INDIAN VILLAGE MISSION—Founded in 1893 operates in the Poona, Satara and Sholapur Districts, with 23 European and 32 Indian workers. The number of Indian Christians is 45. The main work is evangelism of the villages, with Women's Zenana work, and Village schools. There are 4 Village Dispensaries, including a hospital and a large medical work in the great pilgrimage city of Pandharpur, and a hospital at the head-quarters of the Mission, Nasrapur, in the Bhor State. *Secretary:* Mr. J. W. Stothard, Nasrapur, Poona District.

THE AMERICAN CHURCHES OF GOD MISSION—Has two missionaries at Bogra, Bengal.

THE INDIAN CHRISTIAN MISSION—Founded in 1897, has 31 Organised Churches, 10 Missionaries, 24 stations, 41 out-stations, 1,392 Communicants, and 30 Primary schools in the Ellore district, S. India, stations also in Berenag, Kumaon, N. India, and Nuwara Eliya, Ceylon. *Secretary:* A. S. Paynter, Nuwara Eliya, Ceylon.

There are 3 **PENTECOSTAL MISSIONS** at work. The Pentecostal Mission in W. Khandesh and Thana Districts; the Pentecostal Church of the Nazarine Mission at Buldana, Berar, and the Pentecost Bands of the World Mission with a Boys' Orphanage at Dondi Lohara, C. P., a Girls' Orphanage at Raj Nandgaon, and a Leper Home at Raj Nandgaon. The staff consists of 14 missionaries and 28 native preachers and Bible women.

THE SANARPUR AND LOHAGHAT DISTRICT BIBLE AND MEDICAL MISSION—Was established at Lohaghat, 48 miles from Almora, in 1910. Amongst the faith missions are the Vanguard Mission at Sanjan, Thana District, with 6 Missionaries; and the Church of God Mission with 7 Missionaries at Lahore. The Burning Bush Mission has a staff of 8 Missionaries at Allahabad. The Tehri Border Village Mission is the only Christian enterprise in the Himalayan Native State of that name, its agents are stationed at Landour, and have translated portions of the New Testament into the Tehri-Garhwali language. *Secretary:* Miss A. N. Budden.

THE HEPHZIBAH FAITH MISSIONARY ASSOCIATION has six missionaries. *Agent:* D. W. Zook, Adra, B. N. Ry.

THE TIBETAN MISSION—Has 4 Missionaries with headquarters at Darjeeling, and Tibet as its objective. *Secretary:* Miss J. Ferguson, Darjeeling.

THE INDIAN MISSIONARY SOCIETY OF TINNEVELLY (DORNAKAL MISSION)—Opened in 1904 operates in the Warangal District of the Nizam's Dominions. It is the missionary effort of the Tamil Christians of Tinnevely. There are now 2,406 Christians in 69 villages. *Secretary* Mr. J. Anbudaiyan, B.A., L.T., Palamcottah.

THE MISSION TO LEPERS—Founded in 1874, is an interdenominational and international Society for the establishment and maintenance of Asylums for Lepers and Homes for their untainted children, working largely in India, China, and Japan. Its work in India is carried on through co-operation with 29 Missionary Societies. The Mission now has 39 Asylums of its own with over 4,223 inmates, and is aiding or has some connection with work for lepers at 21 other places in India. In the Mission's own and aided Asylums there are about 3,100 Christians. The total number of lepers reached by the Mission in India is about 5,000.

An important feature of the work of the Mission is the segregation of the untainted or healthy children of lepers from their diseased parents. Nearly 600 children are thus being segregated and saved from becoming lepers.

The Mission very largely relies on voluntary contributions for its support. *Patroness:* The Dowager Duchess of Dufferin and Ava. *President:* The Primate of Ireland. *Head Office,* 28, North Bridge, Edinburgh. *Mr. Wellesley C. Bailey,* General Superintendent. *General Secretary:* Mr. W. H. P. Anderson, 20, Lincoln Place, Dublin. *Secretary for India:* The Rev. Frank Oldrieve, Comely Bank, Simla, to whom communications and subscriptions may be sent,

THE REGIONS BEYOND MISSIONARY UNION.—An interdenominational Society commenced work at Motihari, Behar, in 1900, and now occupies 4 stations and 7 outstations in the Champaran and Saran Districts, with a staff of 13 Europeans, and 34 Indian workers. There are 21 Elementary schools, with 517 pupils, a Girls' and a Boys' Orphanage and Boarding school, communicants number 50.

THE NATIONAL MISSIONARY SOCIETY OF INDIA—Established 1905, it has a staff of 21 Indian Missionaries and 20 helpers operates in Montgomery District (the Punjab), Nukkar Thasil (U. P.), North Kanara (Bombay), Karjat-Karmala Talukas (Bombay), Omalur (Madras) and Bhagalkund Agency (C.I.). Christian community 2,000. Twelve schools. Two Dispensaries, Organ: *The National Missionary Intelligencer* (a monthly journal in English sold at 12 as. per year post free).

General Secretaries: Mr. K. T. Paul, B.A., O. B. E. Calcutta and Mr. P. O. Philip, B.A., M. M. S. Office, Vepery, Madras.

THE SEVENTH DAY ADVENTISTS.—Established in India in 1895. Work carried on in English, Hindi, Urdu, Punjabi, Bengali, Santali, Tamil, Telugu, Malayalam, Marathi, Gujerati, Burmese and Karen: including schools, dispensaries and evangelical stations. *President:* W. W. Fletcher., 17, Abbott Road, Lucknow: *Secretary and Treasurer:* A. H. Williams.

THE AMERICAN MENNONITE MISSION.—Established 1899, works in the C. Provinces. Mission staff numbers 20, Indian workers 80, Church members 581, 1 Industrial Training Institution, 1 High School, 1 Bible School, 2 Orphanages, 1 Widows' Home, 1 Leper Asylum; Elementary Schools, 8; Dispensaries, 3; Hospital, 1. *Superintendent:* Rev. P. A. Friesen, P. O. Jamgaon, via Drug, C. P.

THE GENERAL CONFERENCE—MENNONITE MISSION—Started in 1901 in the C. Provinces. Workers number 12; Leper, Medical, Orphan, Zenana, Evangelistic and educational work carried on. *Secretary:* Rev. E. B. Sterner, Janjgir, C.P.

THE KURKU AND CENTRAL INDIA HILL MISSION—Established 1890 in the C. P. and Berar, has a mission staff of 14, Indian workers 20; Churches 6, Communicants 105; Christian community 209; 2 Boarding and 5 Elementary schools, with 74 pupils. *Secretary:* Rev. Carl Wydner, Ellichpur, Berar.

THE CEYLON AND INDIA GENERAL MISSION—Established 1893, occupies stations in India in the Coimbatore and Anantapur Districts. Mission staff 23; Indian workers 76; Churches 10, with Communicants 271, and Christian community 750; Orphanages 3; Elementary schools 29; pupils 682.

Secretary: Pastor W. Mallis, Coonoor, Nilgiris.

THE BOYS' CHRISTIAN HOME MISSION—Owes its existence to a period of famine, was commenced in 1889. Mission staff 11, Indian workers 22. There are elementary schools with 52 children, two orphanages and a Widows' Home, where Industrial training is given. There are three Mission Stations—At Dhond, and at Bahrach, and Benares in United Provinces. *Director:* Rev. Albert Norton, Dhond, Poona District.

Ladies' Societies.

ZENANA BIBLE AND MEDICAL MISSION.—This is an interdenominational society, with headquarters 33 Surrey Street, London, working among women and girls in seven stations in the Bombay Presidency, fourteen in United Provinces, and five in the Punjab. There are 76 European Missionary ladies on the staff and 28 Assistant Missionaries, 151 Indian workers, teachers and nurses and 140 Bible women. During 1917 there were 1,453 in-patients in the five hospitals supported by the Society (Nasik, Benares, Jaunpur, Lucknow and Patna), but the Victoria Hospital, Benares, was practically closed in 1917. There were 18,208 out-patients 75,395 attendances at the Dispensaries in their 44 schools were 3,700 pupils, and there is a University Department at Lahore. The evangelistic side of the work is largely done by house to house visitations and teaching the women in Zenanas; 3,189 women in 2,778 houses were so taught. The 140 Bible women visited 542 villages; the number of houses was 1,230.

THE LUDHIANA ZENANA AND MEDICAL MISSION has removed its headquarters to Lahore leaving one Bible woman working in the city of Ludhiana. Four missionaries are in Lahore and work is being carried on in the Lahore District in connection with the American Presbyterian Mission.

THE MISSIONARY SETTLEMENT FOR UNIVERSITY WOMEN was founded in Bombay in 1895 to reach the higher class of Indian ladies, its activities now include a hostel for women students, in addition to educational, social, and evangelistic work. *Warden,* Miss Dobson, Girgaum, Bombay.

THE MUKTI MISSION, the well-known work of Pandita Ramabai, enables upwards of 350 widows, deserted wives and orphans to earn a comfortable living by means of industrial work organised by the Pandita, supported by a good staff of Indian helpers. A large staff of European Missionary Ladies do evangelistic work in the surrounding Kedgaon, Poona District.

Disciple Societies.

The India Mission of the Disciples of Christ (Foreign Christian Missionary Society of Cincinnati, Ohio, and Christian Women's Board of Missions of Indianapolis combined) commenced work in 1882; its area Central and United Provinces; number of Indian Churches 14, and immersed communicants 18,450. The Christian Constituency numbers 2,945. Its staff, including Missionaries' wives, 76; Asst. missionaries 2 and Indian Workers' staff 319. There are 8 Hospitals, 13 Dispensaries, with 109,994 in-patients and out-patients for the past year. Two Orphanages and an Industrial Home show 536 inmates, and one Boarding School for girls and two hostels for boys, 664 inmates. Two leper asylums with 95 inmates. Tubercular Sanatorium at Pindra Road: 44 inpatients during year. In connection with the industrial work a farm of 400 acres has been taken at Damoh, an industrial School at Damoh which teaches carpentry, needle work industry at Kulpahar which did Rs. 6,200 worth of business last year. Printing work at Jubbulpore 3,000,000 pages of Christian Literature

last year. There are 8 Middle schools, 34 Primary schools with 2,917 scholars; 2 Boarding schools, with 300 students. An active zenana work is carried on, and there is a home for women and children.

The Australian branch has three Mission stations in Poona District. The Great Britain and Ireland branch has two mission stations, one in Mirzapur District, U. P., and one in alamau District, Orissa. These have no organic connection with the India Mission of the Disciples of Christ.

Secretary: Rev. W. B. Alexander, Jubbulpore, C. P.

Udenominational Missions.

THE CENTRAL ASIAN MISSION, with a Church, Dispensary and School is found on the N.-W. Frontier, conducted on the lines of the China Inland Mission, and has Kafristan as its objective.

The Friends' Foreign Missionary Association with Headquarters at Hoshangabad, Central Provinces, commenced in 1874. Work has recently been opened up in the Gwalior and Bhopal States. There are 6 Churches, 24 Missionaries, 197 members, Orphanages for Boys and Girls, 1 Anglo-Vernacular school, 15 Day Schools, one High School and one Zenana Hospital with a general dispensary connected with the Mission, in addition to a self-supporting weaving community at Itarsi, and a Farm Colony near Hoshangabad. *Secretary:* Mr. B. H. Backhouse, Hoshangabad, C. P.

The American Friends' Mission with 5 Missionaries is working at Nowgong. *Secretary:* Miss D. Fistler, Nowgong, C. I.

The Old Church Hebrew Mission was established in 1858, in Calcutta, and is said to be the only Hebrew Christian Agency in India. *Secretary:* J. W. Pringle, Esq., Calcutta.

THE OPEN BRETHREN—Occupy 46 stations in the U. Provinces, Bengal, S. Mahratta, Godaveri Delta, Kanarese, Tinnevely, Malabar Coast, Coimbatore and Nilgiri Districts. They hold an annual Conference at Bangalore.

Lutheran Societies.

THE AMERICAN EVANGELICAL LUTHERAN MISSION. General Council, founded in 1844 for the Godaveri and Kistna Districts, has its Headquarters at Rajahmundry. Its staff consists of 27, including Missionaries' wives and Lady Doctors, with 504 Indian Workers. The membership is 25,800. There are Boys' and Girls' Central Schools, Mission Press, a well-equipped hospital and Book Depot at Rajahmundry, and a High School at Peddapur and another at Bhimavaram, since November 1918 the two American Lutheran Missions at Guntur and Rajahmundry have been amalgamated, existing as two Conferences now. *Chairman:* The Rev. E. Neudoeffe, Bhimavaram.

The 'General Synod' Section of the above, has its headquarters in Guntur, founded in 1842. Its Christian community numbers 46,594, with 16,242 communicants, 27 missionaries inclusive of wives, and 815 Indian workers, shewing an increase of 61 per cent. during the past ten years. The following

institutions are connected with the Mission, a second grade College, High School for Girls, Hospital for women and children, Normal Training School, and Industrial School. *Secretary:* The Rev. Victor McCauley, Guntur.

THE EVANGELICAL NATIONAL MISSIONARY SOCIETY OF SWEDEN, founded in 1856, occupies the districts of Betul, Chhindwara and Saugor in the Central Provinces. There are 1,619 Church members and 11 Indian Congregations. The staff numbers 27, including women, with an Indian staff of 168. Schools number 36 with 1,517 children. Only two of the schools are Secondary, all the rest are Primary Schools. There are small dispensaries at most of the stations. There are three Christian Colonies, 1 Workshop with an aided Carpentry School, 1 Female Industrial School, 1 Widows' Home, 5 Orphanage and Boarding Schools for Christian children. *Secretary:* Rev. P. E. Froberg, Chhindwara, C. P.

THE BASEL MISSION was commenced in 1834, and occupies 26 main stations and 128 out-stations in the Coorg, S. Mahratta, Nilgiris, and N. and S. Canara districts of S. W. India. The total European Staff numbers 41 with 1,110 Indian workers. There are 66 organised Churches, with a membership of 19,762. Educational work embraces 204 schools (including 2 Theological, 9 Boarding and 4 High schools) with 16,970 Elementary and 3,150 Secondary school pupils and 831 scholars in Boarding Institutions and Orphanages. There are good Hospitals at Betgiri and Calicut under European doctors with 3 branch hospitals and 4 Dispensaries connected; 66,804 patients were treated last year. There is a Leper Asylum at Chevayur.

The industrial work of the Mission comprises 17 establishments, embracing one mechanical establishment of a first rate order at Mangalore, 2 Mercantile branches, 7 Weaving and 7 Tile work establishments in the Kanara and Malabar districts; employes number 3,633. A large Printing Press at Mangalore issues publication in the Kanarese, Malayalam, Tulu and English languages.

Secretary: Rev. B. Luthi, Mangalore.

THE CHURCH OF SWEDEN MISSION—Was founded in 1874. Operated till 1915 in the Madura, Tanjore, Trichinopoly and Ramnad Districts. Since 1915 the Mission having taken full charge of the former Leipzig Evangelical Lutheran Mission field, works also in the Madras, Chingleput, Coimbatore, Salem and S. Arcot Districts with diaspora congregations in Rangoon, Penang and Colombo. European staff numbers 21, Ordained Indian Ministers 32, Indian workers 104, Organised Churches 41, Baptised Membership 20,847. Schools 261, Pupils 12,825 (9,750 boys, 3,079 girls). Teaching staff 655. *Secretary:* Rev. E. Heutman, D. D., Trichinopoly.

THE MISSOURI EVANGELICAL LUTHERAN MISSION—is located in North Arcot, Salem, Tinnevely and Travancore with a staff of 5 Missionaries. Three Training Institutions, 155 pupils, 65 Elementary schools with 2,789 pupils are connected with the Mission. *Secretary:* Rev. Henry Hamann, Ambur, N. Arcot District.

THE DANISH EVANGELICAL LUTHERAN MISSION.—Established 1863 in South Arcot, working there and in North Arcot, on the Shevaroy Hills and in Madras, has a total staff of 44 Missionaries and 211 Indian workers, Communicants 1,050, Christian community 3,000, 1 High School, 2 Boarding Schools, 4 Industrial Schools, Elementary Schools 58, total scholars 3,484; Dispensary patients 21,849.

Chairman: Rev. J. Bittmann, 38, Broadway, Madras.

THE SANTAL MISSION OF THE NORTHERN CHURCHES (formerly known as the India Home Mission to the Santals)—Founded in 1867, works in the Santal Parganas, Goalpara (Assam), Malda and Dinajpur. Work is principally among the Santals. The mission staff numbers 25; Indian workers 342; communicants 3,000; Christian community 20,300; organised churches 36; boarding schools 3; pupils 368; elementary schools 31; pupils 535; industrial school, 1. *Secretary*: Rev. P. O. Bodding, Dumka, Santal Parganas.

MISSIONS AND ENEMY TRADING ACT.—In May 1918, the following notice regarding Missions was published in the "Gazette of India":—"The following missions or religious associations are declared companies under Act 2 (the Enemy Trading Act) of 1916:—The Leipzig Evangelical Lutheran Mission, Madras, the Hermansberg Evangelical Lutheran Mission, Madras, the Schleswig Holstein Evangelical Lutheran Mission, Madras, the Gossner Evangelical Lutheran Mission, of the United Provinces, and Behar and Orissa, the German Evangelical Lutheran Mission of Ranchi, Bihar and Orissa. The Governor-General in Council notifies that the powers conferred under Section 7 of the said Act shall extend to the property, movable and immovable, of these missions or religious associations."

In June, 1919, the Government of India stated:—"Effect is already being given to the suggestion that enemy missions in India should be taken over by British societies. The properties and undertakings of hostile missions have been vested in the Provisional Custodian of Enemy Property with a view to their transfer to boards of trustees composed partly of non-official members nominated by the National Missionary Council of India with the approval of the Government of India and partly of Government officials, and those Boards of Trustees will in due course transfer the undertakings and properties to a missionary society to be selected by them with the approval of the Governor-General in Council.

Methodist Societies.

The Methodist Episcopal Church began its Indian Mission in 1857, and with the exception of Assam, and the N. W. Frontier Provinces is now established in all the political Divisions of India. Its number of baptised Christians stands at 266,275, under the supervision of 240 ordained and 900 unordained Ministers. Schools of all grades number 1,569 with 39,087 students, Sunday School scholars stand at 126,000, and young peoples' societies at 604, generally known as Epworth Leagues. Thirty

Anglo-Indian Congregations are found in the larger Cities, with one College, 6 High schools, and numerous Middle schools for this class. For Anglo-Vernacular Education the mission has 3 Colleges, 12 High schools and 62 schools of Lower grade. The net increase from the non-Christian races has been at the rate of 15,000 per annum, for the last decade. The Isabella Thoburn Training College at Lucknow is a large Institution. There are large printing presses at Calcutta, Madras and Lucknow.

In Burma there are 9 schools, with 1,484 pupils, a large Boarding and Day school for European girls at Rangoon, a hill station Boarding school for girls at Thandaung, and an Anglo-Indian Church at Rangoon.

While financially supported by the Board of Foreign Missions of the American Methodist Episcopal Church, ecclesiastically the Church in India is independent of foreign control, being under the supervision of its own bishops, viz., *Bishop*, F. W. Warne, Lucknow. *Bishop*, J. E. Robinson, Bangalore, and *Bishop*, J. W. Robinson, Bombay.

The American Wesleyan Mission, Sanjan, Thana District and Pardi, Surat District, has seven Missionaries on the field and three more under appointment, two main stations, six outstations, nine Schools, one orphanage and an industrial farm. *Superintendent*: C. B. Harvey, Sanjan, Thana District.

The Reformed Episcopal Church of American (Methodist) at Lalitpur and Lucknow U. P. has 2 Missionaries, 4 Outstations, 2 Orphanages and a membership of nearly 100.

THE WESLEYAN METHODIST MISSIONARY SOCIETY commenced work in India in 1817 (Ceylon in 1814). The Mission in India is organised into 10 District Synods with 3 Provincial Synods. There is a large English work connected with the Society, 20 ministers giving their whole time to Military work and English churches.

The districts occupied include 64 main stations in Bengal, Madras, Mysore, Bombay, Punjab, Central Provinces, Hyderabad (Nizam's Dominions), Trichinopoly and Burma. The European staff numbers 148 with 3,150 Indian workers; Communicants 19,633, and total Christian community 58,253. Organised Churches 93.

Educational work comprises 7 Christian Colleges, students, 3,807; 9 Theological Institutions, pupils, 129; 21 High Schools, pupils, 5,548; 10 Industrial schools, pupils, 602; 1,163 Elementary schools, with 58,460 scholars. In Medical work there are 12 hospitals, 22 dispensaries, 18 qualified doctors, 4,757 in-patients and 285,806 attendances at the dispensaries.

The above particulars are those published for 1915.

Vice-Chairman of General Synod: Rev. D. A. Rees, Bangalore.

The Women's Foreign Missionary Society of the M. E. Mission is divided into 6 Conferences and is co-extensive with the main work of the Mission. 110 Lady Missionaries are engaged in Educational, Zenana, and Evangelistic

and Medical work. The Secretary for the Bombay Conference is Miss C. H. Lawson, Talegaon-Dabhada, Poona District.

THE FREE METHODIST MISSION of North America—Established at Yeotmal, 1893, operates

in Berar with a staff of 16 Missionaries and 24 Indian workers. Organised church 1, Communicants 70; 1 Industrial and 6 Elementary schools, with 175 pupils. *Secretary*: Miss Grace E. Barnes, Yeotmal, Berar.

ROYAL ARMY TEMPERANCE ASSOCIATION.

In 1862 there was started among the British troops in Agra a small Society, under the leadership of Rev. G. Gregson, Baptist minister, which after a short time took the name of the Soldiers' Total Abstinence Society.

For some ten years the Society struggled with varying success, spreading to other Garrison Stations, but at the end of that time, though it had obtained recognition from the Horse Guards, and was the first Society whose Pledge was so recognised, the membership was not more than 1,200. In the year 1873, however, through the influence of the then Commander-in-Chief, the work was placed on a firmer footing, the Rev. Gelson Gregson gave up his whole time to it, and by accompanying the troops through the Afghan War, making an extended tour through Egypt, and bringing the work into close touch with troops, both during peace and war, in the year 1886, when he left the Society, it numbered about 11,000 members. He was followed by a Madras Chaplain, who after two years gave place to the Rev. J. H. Bateson. In 1886, the late Lord Roberts, Commander-in-Chief, organised his Scheme for Regimental Institutes, which have had a wonderful effect on the life of British soldiers in the East; and the Total Abstinence Society was so far incorporated into the scheme as to be allowed ample accommodation, and many practical benefits, in every Unit. At the same time the name was changed to that of the Army Temperance Association, and the work of various societies thus linked together, under one organisation. The effect has been more than even the inaugurator himself ever hoped for. The membership rose steadily from that date and still increases.

Growth of the Society.—In 1889 there were 12,140 members; in 1899, 20,688; in 1909, 30,220, while in 1913-14, the total was 35,000, or over 45 per cent. of the total garrison in India. In 1908, the Secretary having retired after 20 years' work, the Rev. H. C. Martin, M.A., a Chaplain in Bengal, was selected by H. E. Lord Kitchener, to the post of Secretary. Twenty years ago, the Association, which has now for some years been the Royal Army Temperance Association, with the Patronage of King Edward VII, and later of the King Emperor, George V., organised a similar Society in Great Britain, with headquarters in London, from which the troops in South Africa, the Mediterranean, etc., are controlled, so that the whole British Army receives the attention of the Association.

Varied Activities.—What primarily has been the effort of the Association, namely, the decrease of Intemperance, and promotion of sobriety among soldiers has gradually grown

into work of every kind, in the interests of soldiers; promotion of sport, occupation of spare time, assistance towards employment in Civil Life, advice and information on the subject of Emigration, provision of Furlough Homes, all tend to enlist the support of officers and men in the Association, and add to its value to them, and to the efficiency of its work, generally. The wonderful change that in late years has taken place in the character of the British Army, in India especially, is due to various causes, including the increased interest in games and sports, the spread of education, the different class of men enlisted, and so on, but the R. A. T. A. has always been given its due share among other causes, by all authorities and Blue Books, and particularly by Officers Commanding Divisions, Brigades and Units. These changes in conduct are seen most plainly in the increased good health of the Army in India.

Effect in the Army.—In the year 1889, 1,174 British soldiers died in India, and 1,800 were invalidated unfit for further duty; in 1910, only 330 died, and 484 were invalidated. In 1889, 688 underwent treatment for Delirium tremens, in 1910, only 37. In conduct the same difference is to be found; as late as 1901 as many as 545 Courts Martial were held on men for offences due to excessive drinking; in 1906 only 217. In 1904, 2,231 good conduct medals were issued; in 1910, there were 4,581. In regard to the character of the men themselves, who become members of the Association, during their service, we find that in 1912, 59 per cent. on transfer from the Colours obtained Exemplary characters, and 93 per cent. either Exemplary or Very Good; the remainder were for the most part men who, after some years of heavy drinking, had towards the end of their service been persuaded to try and reform themselves, but not soon enough to avoid the consequences of previous excess.

Organisation.—The War has necessarily brought increased work upon this society, the results of which were very quickly apparent. Capacious reception sheds fitted up in the Docks at Bombay and Karachi, proved of the greatest value to troops moving from India, and to the large number coming in; special arrangements aided by a loan from the Government of India, enabled the R. A. T. A. to organise branches in every Territorial unit immediately on arrival, special attention being paid to small detachments and to the Hill stations. In consequence there were, within a month of the completion of the Garrison, over 70 Territorial Branches, containing nearly 50 per cent. of the new arrivals, and this has increased consistently ever since. In addition to covering all troops from

Aden to Singapore, the R. A. T. A. is the only Society working in Mesopotamia. Institutes have been opened and the cordial good will of the authorities enables the R. A. T. A. to provide many amenities to the very trying experiences of this Force. The men relieved, and sent back to India for periodic rest, in addition, receive a warm welcome and entertainment at the hands of the Association. The following is the organisation of the Council and management:—

Patron: His Majesty the King Emperor.

President: His Excellency the Commander-in-Chief.

Council:

The General Officers, Heads of Departments, Army Headquarters.

The General Officers Commanding Division.

Two Officers Commanding Regiments.

Officers of the R. A. M. C. and I. M. S.

Two Regimental Quartermasters.

Representatives of the various Churches.

Executive Committee.

General Secretary: Miss I. M. Villiers.

Auditor: Neison, King and Simson.

Bankers: Bank of Bengal and Alliance Bank of Simla.

Head Office: Talbot House, Simla.

THE ANGLO-INDIAN TEMPERANCE ASSOCIATION—Founded in 1888 by the late Mr. W. S. Caine, M.P., is a Home Association which has been the means of establishing a net work of Temperance Societies throughout the Indian Empire, and has provided a common platform upon which Christians, Hindus, Mahomedans and Parsis unite for the moral elevation of the Indian peoples. There are 280 Indian Societies affiliated with the Association. The President is Sir J. Herbert Roberts, Bart., M.P., and Secretaries, Sir Bhalchandra Krishna, Kt., L.M. (Bombay), and Mr. John Turner Rae (London). The interests of the Association are especially represented in Parliament by the President, and the Rt. Hon. T. R. Ferens, M.P., Mr. J. Herbert Lewis, M.P., and the Rt. Hon. Sir Thos. Whitaker, M.P., all of whom are members of the Association's Council. The Association publishes a quarterly journal *Abkari*, edited by Mr. Frederick Grubb. Officers—Arkbrook, Home Park Road, Wimbledon.

THE ALL-INDIA TEMPERANCE CONFERENCE.—Growing out of the Association mentioned above and in closest relation with it is the

All-India Temperance Conference, formed in 1903, which meets every year, as a matter of convenience, at the same time and place as the Indian National Congress, but having no official connection with it. The President is elected annually. The President for 1914 was the Rev. Herbert Anderson. The membership of the Conference is the 280 Indian Temperance Societies affiliated with the Anglo-India Temperance Association as above, from each of which delegates are sent to the Annual Meeting of the Conference. Special Councils embracing Presidency Societies are established at Bombay, Allahabad, Calcutta and Madras, each of which has its own local President, Secretary and Committee. The Bombay Temperance Council was inaugurated in 1897. It consists of delegates elected by about 23 different temperance, religious and philanthropic societies at work in Bombay, Poona, Ahmedabad and Surat, including several of the Christian churches, the International Order of Good Templars, the International Order of Rechabites and the Women's Christian Temperance Union. The medium of communication between the Societies composing the Conference is the *Abkari*, published quarterly from England by the A. I. T. A. Amongst the general aims of the Conference may be mentioned:—

The separation of the licensing from the revenue;

The doing away with the present system of license auctioneering;

The reduction of the present number of liquor shops and the prevention of the formation of new ones in important positions especially in the crowded areas

The later opening and the earlier closing of liquor shops, and the entire closing of them on public holidays;

The introduction of Temperance Teaching in the Government Elementary Schools and Colleges, which despite the desire of Government expressed in their Circular letter No. 730-37 of 12th Sept. 1907 to "deal with the subject of intemperance in a few sensible lessons in the sanctioned Readers," has not yet been adequately treated and as in the corresponding schools in England.

The general spread of Total Abstinence principles depends more largely upon the individual Societies constituting the Conference than upon the official body. Amongst the methods are lantern addresses, dramatic representations and singing by itinerant preachers. Twelve paid Lecturers travel through various districts holding public meetings and addressing the masses wherever possible. Educational work is especially to the front in the Punjab district through the Amritsar Society.

Warrant of Precedence.

(Brought up to 1st January 1919.)

VICTORIA, by the Grace of God of the United Kingdom of Great Britain and Ireland Queen, Defender of the Faith, Empress of India,—

To all to whom these presents shall come :

WHEREAS it hath been represented unto Us that it is advisable that the rank and precedence of persons holding appointments in the East Indies as regulated by Our Royal Warrant, dated the 18th day of October 1876, should be altered, We do therefore hereby declare that it is Our will and pleasure that in lieu of the table laid down in Our said recited Warrant, the following table be henceforth observed with respect to the rank and precedence of the persons hereinafter named, *viz.* :—

1. Governor-General and Viceroy of India.
2. Governors of Madras, Bombay and Bengal.
3. President of the Council of the Governor-General.
4. Lieutenant-Governor when in his own territories.
5. Commander-in-Chief in India; and officers in charge of the Zhoib, Quetta-Pishin and Thal-Chotiaii Districts, throughout their respective charges, whether British or Agency territory.
6. Lieutenant-Governor.
7. Chief Justice of Bengal.

FOURTH CLASS.

74. Members of the Indian Civil Service of years' standing, and Majors and Vice-nsuls.

75. Lieutenants of over 8 years' standing, and Chief Engineers of the Royal Indian Marine.

76. Government Solicitors.

77. Inspectors-General of Registration; Sanitary Commissioners; and Directors of Land Records and Agriculture under Local Administrations; Registrars of Co-operative Credit Societies and Excise Commissioner under Local Administration.

78. Officers in the Third Class Graded List of Civil Offices not reserved for Members of the Indian Civil Service.

The entries in the above table apply exclusively to the persons entered therein, and, while regulating their relative precedence with each other, do not apply to the non-official community resident in India, the members of which shall take their place according to usage.

Officers in the above table will take precedence in the order of the numbers of the entries. Those

included in one number will take precedence *inter se* according to the date of entry into that number.

When an officer holds more than one position in the table, he will be entitled to the highest position accorded to him.

Officers who are temporarily officiating in any number in the table will rank in that number below permanent incumbents.

All officers not mentioned in the above table, whose rank is regulated by comparison with rank in the army, to have the same rank with reference to civil servants as is enjoyed by Military Officers of equal grades.

All other persons who may not be mentioned in this table, to take rank according to general usage, which is to be explained and determined by the Governor-General in Council in case any question shall arise.

Nothing in the foregoing Rules to disturb the existing practice relating to precedence at Native Courts, or on occasions of intercourse with Natives, and the Governor-General in Council to be empowered to make rules for such occasions in case any dispute shall arise.

All ladies to take place according to the rank herein assigned to their respective husbands, with the exception of wives of Peers, and of ladies having precedence in England independently of their husbands, and who are not in rank below the daughters of Barons; such ladies to take place according to their several ranks, with reference to such precedence in England, immediately after the wives of Members of the Council of the Governor-General.

Given at Our Court at Windsor this tenth day of December, in the year of Our Lord One thousand eight hundred and ninety-eight, and in the sixty-second year of Our Reign.

By Her Majesty's Command.

(Signed) GEORGE HAMILTON.

Salutes of 17 guns.

Jodhpur. Honorary Lieut.-General His Highness Maharaja Bahadur Sir Pratap Singh, G.C.B., G.C.S.I., G.C.V.O., A.D.C., late Regent of.

Orchha. His Highness Maharaja Mahindra Sawai Sir Partap Singh Bahadur, G.C.S.I., G.C.I.E., Maharaja of.

Sirohi. His Highness Maharajadhiraja Maharao Sir Kesri Singh Bahadur, G.C.I.E., K.C.S.I., Maharao of.

Salutes of 15 guns.

Benares. His Highness Maharaja Sir Parbhu Narayan Singh Bahadur, G.C.I.E., Maharaja of.

Bhavnagar. His Highness Krishna Kumarsinhji Maharaja of.

Jind. Honorary Lieutenant-Colonel His Highness Maharaja Sir Ranbir Singh, Rajendra Bahadur, G.C.I.E., K.C.S.I., Maharaja of.

Junagadh (or Junagarh). His Highness Vali Ahad Mohabat Khanji, Rasulkhanji, Nawab of.

Kapurthala. Honorary Lieutenant-Colonel His Highness Maharaja Sir Jagatjit Singh Bahadur, G.C.S.I., Maharaja of.

Navanagar (or Nawanager). Honorary Lieutenant-Colonel His Highness Maharaja Shri Sir Ranjitsinhji Vibhaji, K.C.S.I., Maharaja of.

Rampur. Honorary Colonel His Highness Nawab Sir Muhammad Hamid Ali Khan, Bahadur, G.C.I.E., G.C.V.O., A.D.C., Nawab of.

Salute of 13 guns.

Janjira. His Highness Sidi Sir Ahmad Khan Sidi Ibrahim Khan, G.C.I.E., Nawab of.

Salutes of 11 guns.

Barwani. His Highness Rana Sir Ranjit Singh, Rana of.

Bhor. His Highness Mcherban Shanker Rav Chinnaji, Pant Sachiv of.

His Highness Aga Sir Sultan Muhammad Shah Aga Khan, G.C.S.I., G.C.I.E., of Bombay.

Sachin. Honorary Captain His Highness Nawab Sidi Ibrahim Mohamed Yakub Khan, Nawab of.

Shehr and Mokalla. His Highness Sultan Sir Ghalib bin Awadth Al-Kayti, K.C.I.E., Sultan of.

Vankaner (or Wankaner). Honorary Captain Raj Saheb Sir Amarsinhji Banesinhji, K.C.I.E., Raj Saheb of.

Salutes of 9 guns.

Danta. Maharana Shri Hamirsinhji Jaswatsinhji, Maharana of.

Dthala. Amir Nasr bin Shaif bin Sef bin Abdul Hadi, Amir of.

Jamkhindi. Honorary Captain Meherban Sir Parashrainav Ratchandrarav, K.C.I.E., Chief of.

Kanker. Maharajadhiraja Kamal Deo, Chief of. Las Bela. Mir Kamal Khan, C.I.E., Jam of.

Tawngpeng. H. Kun Hsang Awn, K. S. M., Sawbwa of.

Local Salutes.

Salutes of 21 guns.

Bhopal. The Begam (or Nawab) of. Within the limits of her (or his) own territories, permanently.

Indore. The Maharaja (Holkar) of. Within the limits of his own territories, permanently.

Jammu and Kashmir. The Maharaja of. Within the limits of his own territories, permanently.

Salutes of 13 guns.

His Excellency the Governor of Bushire. At the termination of an official visit.

Salutes of 12 guns.

His Excellency Shaikh Sir Khaz'al Khan, G.C.I.E., K.C.S.I., Shaikh of Muhammerah. Fired by British Ships of War in the Persian Gulf at the termination of an official visit by this Chief.

Salute of 11 guns.

His Excellency Shaikh Isa bin Ali al Khalifah, C.S.I., Shaikh of Bahrain. Fired by British Ships of War in the Persian Gulf on the termination of an official visit by this Chief.

Salutes of 5 guns.

The Shaikh of Kuwait. Fired by British Ships of War in the Persian Gulf at the termination of an official visit by this Chief.

The Shaikh of Bahrain. Fired by British Ships of War in the Persian Gulf after the termination of an official visit by this Chief.

The Shaikh of Abu Dhabi. Fired by British Ships of War in the Persian Gulf at the termination of an official visit by this Chief.

Eldest son of the Shaikh of Muhammerah. Fired on occasions when he visits one of His Majesty's Ships as his father's representative.

Eldest son of the Shaikh of Kuwait. Fired on occasions when he visits one of His Majesty's Ships as his father's representative.

The Governor of Muhammerah. At the termination of an official visit.

The Governor of Bunder Abbas. At the termination of an official visit.

The Governor of Lingah. At the termination of an official visit.

Salutes of 3 guns.

The Shaikh of Dibai. Fired by British Ships of War in the Persian Gulf at the termination of an official visit by this Chief.

The Shaikh of Shargah. Fired by British Ships of War in the Persian Gulf at the termination of an official visit by this Chief.

The Shaikh of Ajman. Fired by British Ships of War in the Persian Gulf at the termination of an official visit by this Chief.

The Shaikh of Umm-ul-Qaiwain. Fired by British Ships of War in the Persian Gulf at the termination of an official visit by this Chief.

The Shaikh of Ras-al-Kheima. Fired by British Ships of War in the Persian Gulf at the termination of an official visit by this Chief.

Eldest son of the Shaikh of Bahrain. Fired on occasion when he visits one of His Majesty's Ships as his father's representative.

SALARIES OF CHIEF OFFICERS.

The following are the tables of salaries sanctioned for the Chief Officers of the Administration of India. The tables are liable to variation, and it should be noted that the pay of members of the Indian Civil Service is subject to a deduction of 4 per cent. for subscription towards annuity :—

	Pay per Annum Rs.
Viceroy and Governor-General	2,56,000
Private Secretary to Viceroy	27,000
Military Secretary and Aide-de-Camp to Viceroy	18,000
Commander-in-Chief of the Forces in India	1,00,000
Military Secretary to Commander-in-Chief in India	18,000
Members (6) of the Governor-General's Council	80,000
President, Railway Board	60,000
Member, Railway Board	48,000
Secretaries to the Government of India in the Army and Public Works and Legislative Departments	42,000
Secretaries to the Government of India in the Finance, Foreign, Home, Revenue and Agriculture, Commerce and Industry and Education Departments	48,000
Educational Commissioner	33,000 to 36,000
Comptroller and Auditor-General	54,000
Controller of Currency	36,000 to 42,000

	Pay per Annum. Rs.
2 Accountants-General, Class I	33,000
3 " " " II	30,000
4 " " " III	27,000
1 Commissioner of Excise and Salt	30,000
1 Director-General of Posts and Telegraphs	42,000 to 48,000
2 Postmasters-General	30,000
2 " " "	27,000
3 " " "	24,000
3 " " "	21,000
1 Director, Geological Survey of India	24,000
Deputy Secretaries to the Government of India in the Finance and Foreign Departments	27,000
Deputy Secretaries to the Government of India in the Legislative and Home Departments	24,000
Superintendent of Port Blair	30,000 to 36,000
1 Chief Commissioner of Delhi	36,000
1 Director, Criminal Intelligence	36,000
1 Deputy Director, Criminal Intelligence	18,000 to 24,000
Inspector-General of Forests	31,800
Surveyor-General, Survey of India	36,000
1 Chief Inspector of Mines in India	21,000 to 24,200
1 Director-General, Indian Medical Service	36,000
1 Director-General of Archæology in India	20,400
1 Director-General of Commercial Intelligence	24,000
Controller of Stationery and Printing	18,000 to 27,000
Governors of Madras, Bombay, and Bengal	1,28,000
Private Secretaries to Governors of Madras, Bombay, and Bengal	18,000
Surgeons to Governors of Madras, Bombay, and Bengal	12,000
Military Secretary and Aide-de-Camp to Governors of Madras, Bombay, and Bengal	12,000
Bishop of Calcutta	45,975
Bishop of Madras	25,600
Bishop of Bombay	25,600
Chief Justice of Bengal	72,000
Chief Justices of Madras, Bombay, and the United Provinces of Agra and Oudh	60,000
Puisne Judges of the High Courts of Calcutta (15), Madras (6), Bombay (6), and the United Provinces (6)	48,000
Chief Judge of the Chief Court, Punjab	48,000
" " " " " Burma	48,000
Judges of the "Chief Court," Punjab (4), and Burma (4), except Chief Judges	42,000
7 Political Residents, 1st class	48,000
8 " " " " " 2nd class	33,000
Political Officers on time scale	5,400 to 28,800

Provincial Salaries.

N.B.—Acting and other allowances are not included in the salaries shown.

Bengal.

Governor	1,20,000
3 Members of Council	64,000
1 Member of the Board of Revenue	45,000
5 Commissioners of Divisions	35,000
1 Chief Secretary to Government	45,000
3 Secretaries to Government	33,000
3 Under Secretaries to Government	12,000
1 Excise Commissioner	24,000
1 Chairman of Corporation of Calcutta	30,000
1 Deputy ditto	12,000 to 18,000
11 Collector of Customs, Calcutta	24,000
12 Magistrates and Collectors, 1st grade	27,000
3 " " " " " 2nd "	21,600
4 " " " " " 3rd "	18,000

1	Director of Public Instruction	24,000	to	30,000		

Industries Commission.

A resolution issued by the Government of India in May, 1916, announced the appointment of a Commission to examine and report upon the possibilities of further industrial development in India and to submit its recommendations with special reference to the following questions:—(a) Whether new openings for the profitable employment of Indian capital in commerce and industry can be indicated; (b) Whether and if so in what manner Government can usefully give direct encouragement to the industrial development; (1) By rendering technical advice more freely available; (2) by the demonstration of the practical possibility on a commercial scale of particular industries; (3) by affording directly or indirectly financial assistance to industrial enterprises, or (4) by any other means which are not incompatible with the existing fiscal policy of the Government of India.

Subjects Excluded.—The original Resolution expressly directed that certain matters should be excluded from consideration. In framing the terms of reference, said the Resolution, it has been found necessary to exclude two matters from the scope of the Commission's labours. In the first place any consideration of the present fiscal policy of the Government of India has been excluded from its enquiries. In the next place it was not proposed that the Commission should re-examine those aspects of technical and industrial education which have recently been dealt with by a committee working in England and India, whose reports are at present under the consideration of the Government of India.

Personnel.—The Commission, as originally appointed, consisted of the following gentlemen: President Sir T. H. Holland. Members:—Mr. Chatterton, Sir Fazulbhoj Currimbhoy Ebrahim, Mr. E. Hopkinson, Mr. C. E. Low, C.S., Pandit Madan Mohan Malaviya, Sir R. N. Mukerjee, the Rt. Hon. Sir Horace Plunkett, Mr. F. H. Stewart and Sir D. J. Tata.

Sir Horace Plunkett was unable to serve on account of ill-health.

Mr. E. Hopkinson was compelled for the same reason to retire.

The commission met in October 1916 and proceeded on tour, but in February 1917, the appointment of Sir Thomas Holland to the presidency of the newly constituted Indian Munitions Board necessitated an interruption of the Commission's work for some months. The tour was resumed in November, 1917. Sir Thomas Holland presided over the opening session in Bombay, after which he left the Commission and returned to his duties on the Munitions Board. The presidency of the commission was assumed by Sir Rajendranath Mukerji.

The Report.

The Report of the Commission, which was issued in October 1918, is summarised:—

It is important to note that the constructive proposals depend on the acceptance of two principles:—(1) that in future Government must play an active part in the industrial development of the country, with the aim of making

India more self-contained in respect of men and material, and (2) that it is impossible for Government to undertake that part, unless provided with adequate administrative equipment and forearmed with reliable scientific and technical advice.

With these principles in mind, it will be convenient first to glance at the administrative machinery which the Commission proposes and then to examine the work which it is intended to do. The administrative proposals include the creation of imperial and provincial departments of Industries and of an Imperial Industrial Service. The imperial department would be in charge of a member of the Viceroy's Executive Council, assisted by a board of three members entitled the Indian Industries Board and be responsible for the industrial policy of Government and the inauguration and carrying out of a uniform programme of industrial development throughout the country. The actual administrative work would be almost entirely decentralised and would devolve on Local Governments. The performance of these duties would necessitate the employment of a large staff of officers whose qualifications would primarily depend upon a knowledge of mechanical engineering; and the formation of an Imperial Industrial Service is suggested in order to safeguard Government against the dangers and difficulties of casual recruiting. This service would consist mainly of mechanical engineers and engineering technologists the majority of whom would be employed under the Local Governments. The headquarters of the Department and of the Board should be with the Government of India.

The provincial departments would be administered by Directors of Industries, assisted by specialists and technical advisers who would usually be seconded from imperial services for work under the Local Government. A provincial Director would thus be able to develop the industries of his province with the help of competent engineers and scientists. He would be advised by a provincial Board of Industries composed mainly of non-officials and he should hold the post of a secretary to Government to secure expeditious and effective despatch of work.

Future Possibilities.—It now remains to consider the work which this organisation is to carry out and the conditions of India which render essential a policy of active intervention on the part of Government in the industrial affairs of the country. The first chapters of the report deal with India as an industrial country, her present position and her potentialities. They show how little the march of modern industry has affected the great bulk of the Indian population, which remains engrossed in agriculture, winning a bare subsistence from the soil by antiquated methods of cultivation. Such changes as have been wrought in rural areas are the effects of economic rather than of industrial evolution. In certain centres the progress of western industrial methods is discernible; and a number of these are described in order to present a picture of the conditions

under which industries are carried on, attention being drawn to the shortage and to the general inefficiency of Indian labour and to the lack of an indigenous supervising agency. Proposals are made for the better exploitation of the forests and fisheries. In discussing the industrial deficiencies of India, the report shows how unequal the development of our industrial system has been. Money has been invested in commerce rather than industries, and only those industries have been taken up which appeared to offer safe and easy profits. Previous to the war, too ready reliance was placed on imports from overseas, and this habit was fostered by the Government practice of purchasing stores in England. India produces nearly all the raw materials necessary for the requirements of a modern community; but is unable to manufacture many of the articles and materials essential alike in times of peace and war. For instance, her great textile industries are dependent upon supplies of imported machinery and would have to shut down if command of the seas were lost. It is vital, therefore, for Government to ensure the establishment in India of those industries whose absence exposes us to grave danger in event of war. The report advocates the introduction of modern methods of agriculture and in particular of labour-saving machinery. Greater efficiency in cultivation, and in preparing produce for the market would follow, labour now wastefully employed would be set free for industries, and the establishment of shops for the manufacture and repair of machinery would lead to the growth of a huge engineering industry. After examining the resources for generating power, the report says the coal of India is generally of a poor quality and the radius within which it can be economically used is accordingly limited. Moreover, the extension of metallurgical industries already started involves a severe attack on our visible supplies of cooking coal. The Commission recommends a special survey of the coal position in India. The oil fields of Burma are being rapidly drained and no others of equal value have been proved. Wind power is too intermittent for industrial use. Attention should be directed to more economical methods of using wood fuel, and new materials for industrial alcohol should be investigated. The harnessing of water power appears, however, to afford a more reliable source of energy, especially with a view to the development of thermo-electric industries; and Government is urgently enjoined to undertake a hydrographic survey in order to determine the places which offer possibilities for the establishment of hydro-electric installations.

The Indian in Industries.—The next chapters deal with "The Indian in Industries." They discuss measures designed to improve the efficiency of the Indian artisan and to encourage the educated Indian to take part in industrial enterprise. It is shown that the relative lowness of wages paid to Indian labour is counter-balanced by the comparative inefficiency of the individual Indian workman. The Commission assigns three causes for this inefficiency, viz., the absence of education, the prevailing low standard of comfort and the effects of preventable disease. The Commission expressed itself in favour of universal primary

education, but considers that it would be unfair and unjust to impose upon employers this duty, which devolves rather upon the State and local authorities. But education of a technical kind is also required and the method of instruction to be followed will vary for workers in organised and for workers in cottage industries, the latter of whom, it may be remarked, considerably exceed the former in numbers. For cottage industries the Commission proposes an efficient system of education in industrial schools administered by head masters with practical knowledge of the industries taught, and controlled by the Departments of Industries. The extension of marketing facilities must go hand in hand with the teaching of improved processes. In the case of organised industries mechanical engineering is taken as a typical instance, and the proposals include the establishment of a system of organised apprenticeship for a period of four or five years, with practical training in the workshops and theoretical instruction in attached teaching institutions.

The Commission places better housing in the forefront of its recommendations to raise the standard of comfort of the Indian artisan. Subject to certain safeguards, Government should use its powers under the Land Acquisition Act to acquire sites for industrial dwellings, and land so acquired should be leased to employers on easy terms. Special remedies are proposed in the case of Bombay, where the problems of congestion are unique. General measures of welfare work among factory employees are also suggested and special attention should be paid to the improvement of public health. The elimination of such diseases as hookworm and malaria, which are prevalent almost everywhere in India, would add enormously to the productive capacity of the Indian labourer.

The general aversion from industrial pursuits of the educated Indian is ascribed to hereditary predisposition accentuated by an unpractical system of education. A complete revolution in the existing methods of training is proposed. For manipulative industries, such as mechanical engineering, an apprenticeship system, similar to that suggested for artisans should be adopted. The youth who aspires to become a foreman or an engineer, must learn to take off his coat at the start and should serve a term of apprenticeship in the workshops, supplemented by courses of theoretical instruction. At the conclusion of this period of training he may be allowed to specialise in particular subjects. For non-manipulative or operative industries, on the other hand, the teaching institution should be the main training ground, though practical experience is also necessary. Special proposals are made for commercial and mining education; and the future establishment of two imperial colleges is adumbrated, one for the highest grade of engineering and the other for metallurgy. To ensure the maintenance of close relations between the training institutions and the world of industry the general control of technical education should be transferred to the Department of Industries.

Government intervention.—The remaining chapters of the report deal more specifically with Government intervention in

industries. Government clung long to the tradition of *laissez faire* in industrial matters; but when in recent years it attempted to play a more active part in industrial development, its efforts were rendered futile by the absence of scientific and technical advice to assist it in estimating the value of industrial propositions, and by the lack of any suitable agency to carry out approved proposals. To remedy the first of these defects, a reorganisation of the existing scientific services is advocated, in such a way as to unite in imperial services, classified according to science subjects, all the scattered workers now engaged in the provinces on isolated tasks. Rules are suggested to govern the relations between the members of these services and private industrialists seeking advice. The situation of research institutes and the conditions and terms of employment of these services are questions for the decision of which the Commission considers that the appointment of a special committee is necessary.

The administrative machinery with which Government must be equipped and some of the functions which that machinery will enable it to perform have already been described; but there are many other directions in which the development of industries can be stimulated. Useful and up-to-date information on commercial and industrial matters is essential both for Government and for private merchants and industrialists. A scheme is propounded for collecting such information and for making it available to the public through officers of the Department of Industries. The purchase of Government stores in the past has been conducted in such a way as to handicap Indian manufactures in competing for orders and to retard industrial development in India. The Commission proposes that the Department of Industries should be in charge of this work and that orders should not be placed with the Stores Department of the India Office until the manufacturing capabilities of India have first been exhausted. A chapter is concerned with the law of land acquisition and enunciates principles in accordance with which Government might compulsorily acquire sites for industrial undertakings; in another, the various methods by which Government might render direct technical aid to industries are explained. The Commission considers that ordinarily Government itself should undertake manufacturing operations only for the production of lethal munitions. The administration of the Boiler Acts, the Mining Rules and the Electricity Act, the employment of jail labour, the prevention of adulteration, patents, and the registration of business names, of trade marks and of partnerships, are matters which are specifically dealt with. In the opinion of the Commission the compulsory registration of partnerships is practicable and the question should be examined by Government with a view to legislation.

Small and Cottage Industries.—Industrial co-operation is discussed with reference to small and cottage industries; and the vexed question of railway rates on industries is considered. The Commission thinks that reduced rates to and from ports have been prejudicial to industrial development and that the position requires careful examination with a view to the removal of existing anomalies.

In particular it should be possible to increase the rates on raw produce for export and on imports other than machinery and stores for industrial use. The addition of a commercial member to the Railway Board and the better representation of commercial and industrial interests at the Railway Conference would help to secure a more equitable system of rating. The improvement of waterways and the formation of a Waterways Trust at Calcutta are also proposed.

The Commission lays emphasis on the disorganisation of Indian capital and its shyness in coming forward for industrial development. There is no lack of money in the country, yet the industrialist cannot obtain the use of it except on terms so exorbitant as to devour a large part of his profits. There is a crying necessity for the extension of banking facilities in the mofussil. The Commission is disposed to favour the establishment of an industrial bank or banks; but it considers that the appointment of an expert committee is necessary to deal with this subject and ask Government to take action at an early date. As an 'interim' measure, a scheme is propounded for the provisions of current finance to middle class industrialists, by which the banks would open cash credits in favour of applicants approved by the Department of Industries on the guarantee of Government. Various other methods of financial assistance by Government are suggested, in particular the provision of plant for small and cottage industries on the hire-purchase system.

Position summed up.—To sum up, the Commission finds that India is a country rich in raw materials and in industrial possibilities, but poor in manufacturing accomplishment. The deficiencies in her industrial system are such as to render her liable to foreign penetration in time of peace and to serious dangers in time of war. Her labour is inefficient, but for this reason capable of vast improvement. She relies almost entirely on foreign sources for foremen and supervisors; and her *intelligentsia* have yet to develop a right tradition of industrialism. Her stores of money lie inert and idle. The necessity of securing the economic safety of the country and the inability of the people to secure it without the co-operation and stimulation of Government impose, therefore, on Government a policy of energetic intervention in industrial affairs, and to discharge the multifarious activities which this policy demands, Government must be provided with a suitable industrial equipment in the form of imperial and provincial departments of Industries.

The recurring cost of the proposals is estimated at Rs. 86 lakhs; they involve a capital expenditure of Rs. 150 lakhs, mainly on educational institutions, and a further capital outlay of Rs. 66 lakhs is anticipated for future developments. The Commission considers that this expenditure may be worked up to at the end of a period of 7 years.

Pandit Malaviya appended a minute of dissent objecting to the appointment of an Industrial Service and recommending the enlistment of the necessary staff for a term of years.

Pending the formal constitution of the Industries Department the work is being carried on by Sir Thomas Holland, President of the Munitions Board.

Indian Orders

The Star of India.

The Order of the Star of India was instituted by Queen Victoria in 1861, and enlarged in 1866, 1876, 1897, 1902, and 1911, and the dignity of Knight Grand Commander may be conferred on Princes or Chiefs of India, or upon British subjects for important and loyal service rendered to the Indian Empire; the second and third classes for services in the Indian Empire of not less than thirty years in the department of the Secretary of State for India. It consists of the Sovereign, a Grand Master (the Viceroy of India), the first class of forty-four Knights Grand Commanders (22 British and 22 Indian), the second class of one hundred Knights Commanders, and the third class of two hundred Companions, exclusive of Extra and Honorary Members, as well as certain additional Knights and Companions.

The Insignia are (i) the Collar of gold, composed of the lotus of India, of palm branches tied together in satire, of the united red and white rose, and in the centre an Imperial Crown; all enamelled in their proper colours and linked together by gold chains. (ii) The Star of a Knight Grand Commander is composed of rays of gold issuing from a centre, having thereon a star of five points in diamonds resting upon a light blue enamelled circular riband, tied at the ends and inscribed with the motto of the Order, *Heaven's Light our Guide*, also in diamonds. That of a Knight Commander is somewhat different, and is described below. (iii) The Badge, an onyx cameo having Her Majesty Queen Victoria's Royal Effigy thereon, set in a perforated and ornamental oval, containing the motto of the Order surmounted by a star of five points, all in diamonds. (iv) The Mantle of light blue satin lined with white, and fastened with a cordon of white silk with blue and silver tassels. On the left side a representation of the Star of the Order.

The ribbon of the Order (four inches wide for Knights Grand Commanders) is sky-blue, having a narrow white stripe towards either edge, and is worn from the right shoulder to the left side. A Knight Commander wears (a) around his neck a ribbon two inches in width, of the same colours and pattern as a Knight Grand Commander, and pendent therefrom a badge of a smaller size, (b) on his left breast a Star composed of rays of silver issuing from a gold centre, having thereon a silver star of five points resting upon a light blue enamelled circular ribbon, tied at the ends, inscribed with the motto of the Order in diamonds. A Companion wears from his left breast a badge of the same form as appointed for a Knight Commander, but of a smaller size pendent to a like ribbon of the breadth of one and a half inches. All Insignia are returnable at death to the Central Chancery, or if the recipient was resident in India, to the Secretary of the Order at Calcutta.

Sovereign of the Order:—H. I. M. The King.

Grand Master of the Order:—His Excellency the Viceroy and Governor-General of India, the Right Honourable Baron Chelmsford.

Honorary Knights Grand Commanders (G. C. S. I.)

Prince Louis d'Arenberg
Hon. General His Majesty Chowfa Maha Vajiravudh, King of Siam.

Extra Knights Grand Commanders (G. C. S. I.)

H. M. the Queen Empress
H. R. H. The Duke of Connaught

Knights Grand Commanders (G. C. S. I.)

H. H. the Gaekwar of Baroda
H. H. the Maharana of Udaipur

OFFICERS OF THE ORDER.

Secretary, Sir John Wood

Registrar, Col. Sir Douglas F. R. Dawson

The Most Eminent Order of the Indian Empire.

This Order, instituted by H. M. Queen Victoria, Empress of India, Jan. 1st, 1878, and extended and enlarged in 1886, 1887, 1892, 1897, and 1902 is conferred for services rendered to the Indian Empire, and consists of the Sovereign, a Grand Master, thirty-two Knights Grand Commanders (of whom the Grand Master is first and principal), ninety-two Knights Commanders, and an indefinite number of Companions (not exceeding, without special statute, 20 nominations in any one year); also Extra and Honorary Members over and above the vacancies caused by promotion to a higher class of the Order, as well as certain Additional Knights and Companions appointed by special statute Jan. 1st, 1909, commemorative of the 50th Anniversary of the assumption of Crown Govt. in India.

The Insignia are: (i) The COLLAR of gold formed of elephants, lotus flowers, peacocks in their pride, and Indian roses, in the centre the Imperial Crown, the whole linked together with chains; (ii) The STAR of the Knight Grand Commander, comprised of five rays of silver, having a small ray of gold between each of them, the whole alternately plain and scaled, issuing from a gold centre, having thereon Her Majesty Queen Victoria's Royal Effigy, within a purple circle, edged and lettered gold, inscribed *Imperatrix Auspiciis*, and surmounted by an Imperial Crown gold; (iii) The BADGE, consisting of a rose, enamelled gules, barbed vert, and having in the centre Her Majesty Queen Victoria's Royal Effigy, within a purple circle, edged and lettered gold, inscribed *Imperatrix Auspiciis*, surmounted by an Imperial Crown, also gold; (iv) The MANTLE is of Imperial purple satin, lined with and fastened by a cordon of

white silk, with purple silk and gold tassels attached. On the left side a representation of the Star of the Order.

A Knight Commander wears: (a) around his neck a ribbon two inches in width, of the same colour (purple) and pattern as a Knight Grand Commander, pendent therefrom a badge of smaller size: (b) on his left breast a star, similar to that of the first class, but the rays of which are all of silver.

The above mentioned Insignia are returned at death to the Central Chancery, or if the Knight was resident in India to the Secretary of the Order at Calcutta.

A Companion wears from the left breast a badge (not returnable at death) of the same form as appointed for a Knight Commander, but of smaller size, pendent to a like ribbon of the breadth of one and a half inches.

Sovereign of the Order:—The King, Emperor of India.

Grand Master of the Order:—Baron Chelmsford.

Honorary Knights Grand Commanders
(G. C. I. E.)

The *ex*-Emperor of Korea

Shaikh Sir Khazal Khan, Shaikh of Mohammerah and Dependencies.

OFFICERS OF THE ORDER.

Secretary, Sir J. B. Wood
 Registrar, Col. Sir Douglas Dawson

The Imperial Order of the
 Crown of India.

This Order was instituted Jan. 1, 1878 and for a like purpose with the simultaneously created Order of the Indian Empire. It consists of the Queen and Queen Mother with some Royal Princesses, and the female relatives of Indian Princes or of persons who have held conspicuous offices in connection with India. Badge, the royal cipher in jewels within an oval surmounted by an Heraldic Crown and attached to a bow of light blue watered ribbon, edged white. Designation, the letters C. I.

Sovereign of the Order.

THE KING-EMPEROR OF INDIA,

Ladies of the Order (C. I.)

Her Majesty The Queen
 H. M. Queen Alexandra

 Alice, Baroness Northcote

Nora Henrietta, Countess Roberts
 Amelia Maria, Lady White
 Mary Katherine, Lady Lockhart
 Baroness Amptill
 The Lady Willingdon
 Countess of Minto
 Marchioness of Crewe
 H. H. Begum of Bhopal

THE KAISAR-I-HIND MEDAL.

This decoration was instituted in 1900, the preamble to the Royal Warrant—which was amended in 1901 and 1912—being as follows:—"Whereas We, taking into Our Royal consideration that there do not exist adequate means whereby We can reward important and useful services rendered to Us in Our Indian Empire in the advancement of the public interests of Our said Empire, and taking also into consideration the expediency of distinguishing such services by some mark of Our Royal favour: Now for the purpose of attaining an end so desirable as that of thus distinguishing such services aforesaid, We have instituted and created, and by these presents for Us, Our Heirs and Successors, do institute and create a new Decoration." The decoration is styled "The Kaisar-i-Hind Medal for Public Service in India" and consists of two classes. The Medal is an oval shaped Badge or Decoration—in gold for the First Class and in silver for the Second Class—with the Royal Cypher on one side and on the reverse the words "Kaisar-i-Hind for Public Service in India;" it is suspended on the left breast by a dark blue ribbon.

Indian Names and Titles.

There is a bewildering multiplicity of Indian titles, made all the more difficult inasmuch as here is a difference of nomenclature between the titles of Hindus and Mahomedans. Some titles are hereditary and represent ruling chiefs or those nominally such (and of these there are no less than some 620, whilst of the titles themselves some 200 are known); others are personal honours conferred on individuals by the Indian Government, and even then sometimes made hereditary. Yet again, there are numerous complimentary titles, or specifications of office, expressed in Hindu phrases, of which we have occasionally supplied the interpretations. It must be added that though *caste* is often figuring in the names it has nothing whatever to do with the titles. Amir, Khan, Mir, Sultan, Sri, &c., are confusingly used as both titles and names.

The order of rank is thus given by Sir R. Keithbridge in "The Golden Book of India."

Hindu—Maharaja Bahadur, Maharaja, Raja Bahadur, Raja, Rai Bahadur, Rai Saheb, Rai.

Mohammedan—Nizam, Nawab Bahadur, Nawab, Khan Bahadur, Khan Saheb, Khan.

Parsis and Bene-Israelites—Khan Bahadur, Khan Saheb.

Afsur—a corruption of the English "officer."

Ahluwalia—name of a princely family resident at the village of Ahlu, near Lahore.

Akhundzada—son of a Head Officer.

Alijah (Sindhi)—of exalted rank.

Ali Raja—Sea King (Laccadives).

Amir (corruptly *Emir*)—a Mohammedan Chief often also a personal name.

Asaf—a Minister.

Baba—lit. "father;" a respectful "Mr." Irish "Your Honour."

Babu—strictly a 5th or still younger son of a Raja, but often used of any son younger than the heir, whilst it has also grown into a term of address—Esquire. There are, however, one or two Rajas whose sons are known respectively as—1st, Kunwar; 2nd, Diwan; 3rd, Thakur; 4th, Lal; 5th, Babu.

Bahadur—lit. "brave" or "warrior;" a title used by both Hindus and Mohammedans, often bestowed by Government; added to other titles it increases their honour, but alone it designates an inferior ruler.

Bakhshi—a revenue officer or magistrate.

Begum or **Begam**—the feminine of "Nawab" combined in Bhopal as "Nawab Begum."

Besar—apparently a large land-owner.

Bhonsle—name of a Maratha dynasty.

Bhup—title of the ruler of Cooch Behar.

Bhugti—name of a Baluch tribe.

Chhatrapati—one of sufficient dignity to have an umbrella carried over him.

Dada—lit. "grandfather" (paternal); any venerable person.

Dawla and **Dawat**—State, also one in office.

Deb—a Brahminical priestly title; taken from the name of a divinity.

Dhiraj—"Lord of the Lands;" added to "Raja," &c., it means "paramount."

Diwan—a Vizier or other First Minister to a native Chief, either Hindu or Mohammedan, and equal in rank with "Sardar," under which see other equivalents. The term is also used of a Council of State.

Elaya Raja—title given to the heir of the Maharaja of Travancore.

Farzand (with defining words added)—"favorite" or "beloved."

Fateh—"victory."

Fath Jeang—"Victorious in Battle" (a title of the Nizam).

Gaekwar (sometimes *Guicowar*)—title with "Maharaja" added of the ruler of Baroda. It was once a caste name and means "cowherd, i.e., the protector of the sacred animal; but later on, in common with "Holkar" and "Sindhia," it came to be a dynastic appellation and consequently regarded as a title. Thus, a Prince becomes "Gaekwar" on succeeding to the estate of Baroda; "Holkar," to that of Indore; and "Sindhia," to that of Gwalior.

Hafiz—guardian.

Haji—one who has made pilgrimage to Mecca.

Hiera Lal—"diamond ruby."

Holkar—see "Gaekwar."

Jah—a term denoting dignity.

Jam (Sindhi or Baluch)—Chief.

Kazi—(better written *Qazi*)—a Mohammedan magistrate.

Khan—originally the ruler of a small Mohammedan State, now a nearly empty title though prized. It is very frequently used as a name, especially by Afghans and Pathans.

Khawaja—a Persian word for "master," sometimes a name.

Kunwar or **Kumar**—the heir of a Raja.

Lal—a younger son of a Raja (strictly a 4th son, but see under "Babu").

Lokenara or **Lokindra**—"Protector of the World," title of the Chiefs of Dholpur and Dattia.

Mahant—a feudal title borne by the heads of a Hindu religious body.

Maharaja—the highest of hereditary rulers among the Hindus, or else a personal distinction conferred by Government. It has several variations as under "Raja," with the addition of *Maharaj Rana*; its feminine is *Maharani* (*maha*=great).

Malik—master, proprietor.

Mian—title of the son of a Rajput Nawab resembling the Scottish "Master."

Mir—a leader, an inferior title which, like "Khan," has grown into a name. It is especially used by descendants of the Chiefs of Sind.

Mirza—if prefixed, "Mr." or "Esquire."

Mong, Moug, or Maung (Arakanese)—leader.

Mouvi or *Maulvi*—a learned man or teacher.

Mudaliyar or *Mud-liar*—a personal proper name, but implying "steward of the lands."

Mumtaz-ud-Daula—distinguished in the State *Mulk*, in the country).

Munshi—president, or presiding official.

Myowun—"Mr."

Nawab—originally a Viceroy under the Moghal Government, now the regular leading title of a Mohammedan Prince, corresponding to "Maharaja" of the Hindus.

Nazim—a ruler (not to be confused with following).

Nizam—the title of the ruler of Hyderabad, the one Mohammedan Prince superior to Nawab.

Nono (Thibetan)—the ruler of Spitta.

Pandi or *Pundi*—a learned man.

Peshkup—manager or agent.

Prince—term used in English courtesy for "Shahzada," but specially conferred in the case of "Prince of Arcot" (called also "Armini-Arcot").

Raja—a Hindu Prince of exalted rank, but inferior to "Maharaja." The feminine is *Rani* (Princess or Queen), and it has the variations *Raj*, *Rana*, *Rao*, *Rai*, *Rawal*, *Rawat*, *Raikwar*, *Raikbar*, and *Raikat*. The form *Rai* is common in Bengal, *Rao* in S. & W. India.

Raj Rajeshwar—King of Kings.

Risaldar—commander of a troop of horses.

Sahab—the Native Hindu term used to or of a European ("Mr. Smith" would be mentioned as "Smith Sahab," and his wife "Smith Mem-Sahab," but in *addressing* it would be "Sahab," fem. "Saheba," without the name); occasionally appended to a title in the same way as "Bahadur," but inferior (=master). The unusual combination "Nawab Sahab" implies a mixed population of Hindus and Mohammedans.

Sahibzada—son of a person of consequence.

Said, *Sayid*, *Saiyid*, *Sidi*, *Syed*, *Syud*—various forms for a title adopted by those who claim direct male descent from Mohammed's grandson Husain.

Sardar (corrupted to *Sirdar*)—a leading Government official, either civil or military, even a Grand Vizier. Nearly all the Punjab Barons bear this title. It and "Diwan" are like in value and used by both Hindus and Mohammedans. So, but Mohammedans only, are "Wali," "Sultan," "Amir," "Mir," "Mirza," "Mian," and "Khan."

Sawai—a Hindu title implying a slight distinction (lit. one-fourth better than others).

Sawbwa (Burmese)—a Chief.

Shahzada—son of a King.

Shaikh or *Sheikh* (Arabic)—a Chief.

Shams-ud-Ulama—a Mohammedan title denoting "learned."

Shamshir-Jang—"Sword of Battle" (a title of the Maharaja of Travancore).

Sidi—a variation of "Said."

Sindhia—see under "Gaekwar."

Sri or *Shri*—lit. fortune, beauty: a Sanscrit term used by Hindus in speaking of a person much respected (never addressed to him; nearly—"Esquire"); used also of divinities. The two forms of spelling are occasioned by the intermediate sound of the *s* (that of *s* in the German *Stadt*).

Subadar—Governor of a province.

Sultan—like "Sardar."

Syed, *Syud*—more variations of "Said."

Talukdar—an Oudh landlord.

Talpur—the name of a dynasty in Sind.

Thakur—a Hindu term equivalent to "Bahadur," whether as affix or alone.

Tumandar—a Persian word denoting some office.

Umara—term implying the Nobles collectively.

Wali—like "Sardar." The Governor of Khe-lat is so termed, whilst the Chiefs of Cabul are both "Wali" and "Mir."

Zemindar or *Zamindar*—a landowner; orig. a Mohammedan collector of revenue.

Distinctive Badges.—An announcement was made at the Coronation Durbar in 1911, that a distinctive badge should be granted to present holders and future recipients of the titles of 'Diwan Bahadur', 'Sardar Bahadur', 'Khan Bahadur', 'Rai Bahadur', 'Rao Bahadur', 'Khan Sahib', 'Rai Sahib' and 'Rao Sahib'. Subsequently the following regulations in respect of these decorations were issued:—(1) The decoration to be worn by the holders of the titles above mentioned shall be a badge or medallion bearing the King's effigy crowned and the name of the title, both to be executed on a plaque or shield surrounded by a five-pointed star surmounted by the Imperial Crown, the plaque or shield being of silver gilt for the titles of Diwan, Sardar, Khan, Rai and Rao Bahadur, and of silver for the titles of Khan, Rai, and Rao Sahib. (2) The badge shall be worn suspended round the neck by a ribbon of one inch and a half in width, which for the titles of Diwan and Sardar Bahadur shall be light blue with a dark blue border, for the titles of Khan, Rai and Rao Bahadur light red with a dark red border, and for the titles of Khan, Rai and Rao Sahib dark blue with light blue border.

A Press Note issued in November, 1914, states:—The Government of India have recently had under consideration the question of the position in which **miniatures** of Indian titles should be worn, and have decided that they should be worn on the left breast fastened by a brooch, and not suspended round the neck by a ribbon as prescribed in the case of the Badge itself. When the miniatures are worn in conjunction with other decorations, they should be placed immediately after the Kaiser-i-Hind Medal.

Indian Distinguished Service Medal.—This medal was instituted on June 28th, 1907, by an Army Order published in Simla as a reward for both commissioned and non-commissioned officers of the regular and other forces in India. It bears on the obverse the bust of King Edward VII, and on the reverse a laurel wreath encircling the words For Distinguished Service. The

medal, $1\frac{3}{8}$ inches in diameter, is ordered to be worn immediately to the right of all war medals suspended by a red ribbon $1\frac{1}{2}$ in. wide, with blue edges $\frac{3}{8}$ in. wide. This medal may be conferred by the Viceroy of India.

Indian Order of Merit.—This reward of valour was instituted by the H. E. I. Co. in 1837, to reward personal bravery without any reference to length of service or good conduct. It is divided into three classes and is awarded to native officers and men for distinguished conduct in the field. On the advancement from one class to another the star is surrendered to the Government, and the superior class substituted, but in the event of the death of the recipient his relatives retain the decoration. The order carries with it an increase of one-third in the pay of the recipient, and in the event of his death the allowance is continued to his widow for three years. The First Class consists of a star of eight points, $1\frac{3}{8}$ in. in diameter, having in the centre a group of dark blue enamel bearing crossed swords in gold, within a gold circle, and the inscription Reward of Valour, the whole being surmounted by two wreaths of laurel in gold. The Second Class star is of silver, with the wreaths of laurel in gold; and the Third Class entirely of silver. The decoration is suspended from a simple loop and bar from a dark-blue ribbon $1\frac{1}{2}$ in. in width with red edges, bearing a gold or silver buckle according to class.

Order of British India.—This order was instituted at the same time as the Order of Merit, to reward native commissioned officers for long and faithful service in the Indian Army. Since 1878, however, any person European or native, holding a commission in a native regiment, became eligible for admission to the Order without reference to creed or colour.

The First Class consists of a gold eight-pointed radiated star $1\frac{1}{2}$ in. in diameter. The centre is occupied by a lion statant gardant upon a ground of light-blue enamel, within a dark-blue band inscribed Order of British India, and encircled by two laurel wreaths of gold. A gold loop and ring are attached to the crown for suspension from a broad ornamental band $\frac{5}{8}$ in. in diameter, through which the ribbon, once blue, now red, is passed for suspension from the neck. The Second Class is $1\frac{1}{10}$ in. in diameter with dark-blue enamelled centre: there is no crown on this class, and the suspender is formed of an ornamental gold loop. The reverse is plain in both classes. The First Class carries with it the title Sirdar Bahadur, and an additional allowance of two rupees a day: and the Second the title of Bahadur, and an extra allowance of one rupee per day.

Indian Meritorious Service Medal.—This was instituted on July 27th, 1888, and on receipt of the medal the order states "a non-commissioned officer must surrender his Long Service and Good Conduct medal": but on being promoted to a commission he may retain the M. S. medal, but the annuity attached to it will cease. On the obverse is the diademed bust of Queen Victoria facing left, with a veil falling over the crown behind, encircled by the legend Victoria Kaiser-i-Hind. On the reverse is a wreath of lotus leaves enclosing a wreath of palm tied at the base, having a star beneath; between the two wreaths is the inscription for meritorious service. Within the palm wreath is the word India. The medal, $1\frac{3}{8}$ in. in diameter, is suspended from a scroll by means of a red ribbon $1\frac{1}{2}$ in. wide. The medals issued during the reigns of Queen Victoria's successors bear on the obverse their bust in profile with the legend altered to EDWARDVS or GEORGIVS.

Laws and the Administration of Justice.

The indigenous law of India is personal and divisible with reference to the two great classes of the population, Hindu and Mahomedan. Both systems claim divine origin and are inextricably interwoven with religion, and each exists in combination with a law based on custom. At first the tendency of the English was to make their law public and territorial, and on the establishment of the Supreme Court at Calcutta in 1773 and the advent of English lawyers as judges, they proceeded to apply it to Europeans and Indians alike. This error was rectified by the Declaratory Act of 1780, by which Parliament declared that as against a Hindu the Hindu law and usage, and as against a Mahomedan the laws and customs of Islam should be applied. The rules of the Shastras and the Koran have been in some cases altered and relaxed. Instances can be found in the Bengal Sati Regulation Act of 1829; the Indian Slavery Act, 1843; the Caste Disabilities Removal Act of 1850; the Hindu Widows' Remarriage Act, 1856; and other Acts and Codes. To quote the Imperial Gazetteer, "A certain number of the older English statutes and the English common law are to a limited extent still in force in the Presidency Towns as applicable to Europeans, while much of the old Hindu and Mahomedan law is everywhere personal to their native fellow subjects; but apart from these, and from the customary law, which is as far as possible recognised by the Courts, the law of British India is the creation of statutory enactments made for it either at Westminster or by the authorities in India to whom the necessary law-giving functions have from time to time been delegated."

Codification.

Before the transfer of India to the Crown the law was in a state of great confusion. Sir Henry Cunningham described it as "hopelessly unwieldy, entangled and confusing." The first steps toward general codification were taken in 1833, when a Commission was appointed, of which Lord Macaulay was the moving spirit, to prepare a penal code. Twenty-two years elapsed before it became law, during which period it underwent revision from his successors in the Law Membership, and especially by Sir Barnes Peacock, the last Chief Justice of the Supreme Court of Calcutta. The Penal Code, which became law in 1860, was followed in 1861 by a Code of Criminal Procedure. Substantially the whole criminal law of British India is contained in these two Codes. One of the most eminent lawyers who ever came to India, Sir James Stephen, said "The Indian penal code may be described as the criminal law of England freed from all technicalities and superfluities, systematically arranged and modified in some few particulars (they are surprisingly few) to suit the circumstances of British India. It is practically impossible to misunderstand the code." The rules of Civil Procedure have been embodied in the Code of Civil Procedure. The Indian Penal Code has from time to time been amended. The Code of Civil Procedure was remodelled in 1908 and the Code of Criminal Procedure in 1898. These Codes are now in force.

European British Subjects.

Whilst the substantive criminal law is the same for all classes, certain distinctions of procedure have always been maintained in regard to criminal charges against European British subjects. Until 1872 European British subjects could only be tried or punished by one of the High Courts. It was then enacted that European British subjects should be liable to be tried for any offences by magistrates of the highest class, who were also justices of the peace, and by judges of the Sessions Courts; but it was necessary in both cases that the magistrate or judge should himself be a European British subject. In 1883 the Government of India announced that they had decided "to settle the question of jurisdiction over European subjects in such a way as to remove from the code at once and completely every judicial disqualification which is based merely on race distinctions." This decision, embodied in the Ilbert Bill, aroused a storm of indignation which is still remembered. The controversy ended in a compromise which is thus summarised by Sir John Strachey ("India"). "The controversy ended with the virtual, though not avowed, abandonment of the measure proposed by the Government. Act III of 1884, by which the law previously in force was amended, cannot be said to have diminished the privileges of European British subjects charged with offences, and it left their position as exceptional as before. The general disqualification of native judges and magistrates remains; but if a native of India be appointed to the post of district magistrate or sessions judge, his powers in regard to jurisdiction over European British subjects are the same as those of an Englishman holding the same office. This provision however is subject to the condition that every European British subject brought for trial before the district magistrate or sessions judge has the right, however trivial be the charge, to claim to be tried by a jury of which not less than half the number shall be Europeans or Americans.....Whilst this change was made in the powers of district magistrates, the law in regard to other magistrates remained unaltered." Since 1836 no distinctions of race have been recognised in the civil courts throughout India.

High Courts.

The highest legal tribunals in India are the High Courts of Judicature. These were constituted by the Indian High Courts Act of 1861 for Bengal, Bombay and Madras, and later for the United Provinces and the Punjab superseding the old supreme and Sudder Courts. The Judges are appointed by the Crown; they hold office during the pleasure of the Sovereign; at least one-third of their number are barristers, one-third are recruited from the judicial branch of the Indian Civil Service, the remaining places being available for the appointment of Indian lawyers. Trial by jury is the rule in original criminal cases before the High Courts, but juries are never employed in civil suits in India.

For other parts of India High Courts have been formed under other names, the chief

ference being that they derive their authority from the Government of India, not from Parliament. In Burma there is a Chief Court, with three or more judges; in the other provinces the chief appellate authority is an officer called the Judicial Commissioner. In Sind the Judicial Commissioner is termed Judge of the Sudder Court and has two colleagues.

The High Courts are the Courts of appeal from the superior courts in the districts, criminal and civil, and their decisions are final, except in cases in which an appeal lies to His Majesty in Council and is heard by the Judicial Committee of the Privy Council in England. The High Courts exercise supervision over all the subordinate courts. Returns are regularly sent to them at short intervals and the High Courts are able, by examining the returns, by ending for proceedings, and by calling for explanations, as well as from the cases that come before them in appeal, to keep themselves to some extent acquainted with the manner in which the courts generally are discharging their duties.

Lower Courts.

The Code of Criminal Procedure provides for the constitution of inferior criminal courts styled courts of session and courts of magistrates. Every province, outside the Presidency towns, is divided into sessions divisions, consisting of one or more districts, and every sessions division has a court of session and a sessions judge, with assistance if need be. These stationary sessions courts take the place of the English Assizes, and are competent to try all accused persons duly committed, and to inflict any punishment authorised by law, but sentences of death are subject to confirmation by the highest court of criminal appeal in the province. Magistrates' courts are of three classes with descending powers. Provision is made and largely utilised in the towns, for the appointment of honorary magistrates; in the Presidency towns Presidency magistrates deal with magisterial cases and benches of Justices of the Peace or honorary magistrates dispose of the less important cases.

Trials before courts of session are either with assessors or juries. Assessors assist, but do not bind the judge by their opinions; on juries the opinion of the majority prevails if accepted by the presiding Judge. The Indian law allows considerable latitude of appeal. The prerogative of mercy is exercised by the Governor-General-in-Council and the Local Government concerned without prejudice to the superior power of the Crown.

The constitution and jurisdiction of the inferior civil courts varies. Broadly speaking, one district and sessions judge is appointed for each district: as District Judge he presides in its principal civil court of original jurisdiction; his functions as Sessions Judge have been described. For these posts members of the Indian Civil Service are mainly selected though some appointments are made from the Provincial Service. Next come the Subordinate Judges and Munsiffs, the extent of whose original jurisdiction varies in different parts of India. The civil courts, below the grade of District

Judge; are almost invariably presided over by Indians. There are in addition a number of Courts of Small Causes, with jurisdiction to try money suits up to Rs. 500. In the Presidency Towns, where the Chartered High Courts have original jurisdiction, Small Cause Courts dispose of money suits up to Rs. 2,000. As Insolvency Courts the chartered High Courts of Calcutta, Bombay and Madras have jurisdiction in the Presidency towns. In the mofussil similar powers were conferred on the District Courts by the Insolvency Act of 1906.

Coroners are appointed only for the Presidency Towns of Calcutta and Bombay. Elsewhere their duties are discharged by the ordinary staff of magistrates and police officers unaided by jurors.

Legal Practitioners.

Legal practitioners in India are divided into Barristers-at-Law, Advocates of the High Court, Vakils and Attorneys (Solicitors) of High Courts, and Pleaders, Mukhtiaris and revenue agents. Barristers and Advocates are admitted by each High Court to practise in it and its subordinate courts; and they alone are admitted to practise on the original side of some of the chartered High Courts. Vakils are persons duly qualified who are admitted to practise on the appellate side of the chartered High Courts and in the Courts subordinate to the High Courts. Attorneys are required to qualify before admission to practise in much the same way as in England. The rule that a solicitor must instruct counsel prevails only on the original side of certain of the High Courts. Pleaders practise in the subordinate courts in accordance with rules framed by the High Courts.

Organisation of the Bar.

At Calcutta, Madras, and Bombay there is a Bar Committee presided over, *ex officio*, by the Advocate-General. This body is elected by the barristers practising in each High Court, and its functions are to watch the interests of the Bar and to regulate its etiquette. At Allahabad, Lahore, Nagpore, and Rangoon a similar Bar Committee exists, but the electorate is extended to include the vakils or native pleaders, and the president is either the senior practising member of the Bar or the Government Advocate. In the larger Districts and Sessions Courts, an organisation representing the Bar is usually to be found, and in the subordinate Courts, including the Revenue Courts, similar machinery is generally in use. Pending an opportunity of detailed inquiries in India these general descriptions must suffice.

Composition of the Bar.

A considerable change is occurring in the composition of the Indian Bar. The following extract from an informing article in the *Times* (May 25, 1914) indicates the character and incidence of this development: "During the last forty years, a striking change has taken place in the professional class. The bulk of practice has largely passed from British to Indian hands, while, at the same time, the profession has grown to an enormous extent. One typical illustration may be quoted. Attached to the Bombay High Court in 1871 there

were 38 solicitors, of whom 10 were Indian and 28 English, and 24 advocates, of whom 7 were Indian and 17 English. In 1911, attached to the same High Court, there were 150 solicitors, of whom more than 130 were Indian and the remainder English, and 250 advocates, of whom 16 only were English and the remainder Indian."

Law Officers.

The Government of India has its own law colleague in the Legal Member of Council. All Government measures are drafted in this department. Outside the Council the principal law officer of the Government of India is the Advocate-General of Bengal, who is appointed by the Crown, is the leader of the local Bar, and is always nominated a member of the Provincial Legislative Council. In Calcutta he is assisted by the Standing Counsel and the Government Solicitor. There are Advocates-General and Government Solicitors for Bombay and Madras, and in Bombay there is attached to the Secretariat a Legal Remembrancer and an Assistant Legal Remembrancer, drawn from the Judicial Branch of the Indian Civil Service. The Government of Bengal consults the Bengal Advocate-General, the Standing Counsel and the Government Solicitor, and has besides a Legal Remembrancer (a Civil Servant) and a Deputy Legal Remembrancer (a practising barrister); the United Provinces are equipped with a civilian Legal Remembrancer and professional lawyers as Government Advocate and Assistant Government Advocate; the Punjab has a Legal Remembrancer, Government Advocate and a Junior Government Advocate; and Burma a Government Advocate, besides a Secretary to the Local Legislative Council.

Sheriffs are attached to the High Courts of Calcutta, Madras and Bombay. They are appointed by Government, selected from non-officials of standing, the detailed work being done by deputy sheriffs, who are officers of the Court.

Law Reports.

The Indian Law Reports are published in four series—Calcutta, Madras, Bombay, and Allahabad, under the authority of the Governor-General in Council. They contain cases determined by the High Court and by the Judicial Committee on appeal from the particular High Court. These appeals raise questions of very great importance, and the Council of Law Reporting for England and Wales show their appreciation by printing the Indian Appeals in a separate volume, and have also compiled a digest of Indian Appeals covering the period 1874-1893. The other Provinces and States have series of reports issued under the authority (either of the Judiciary or the State,

Legislative Power.

The supreme power of Parliament to legislate for the whole of India cannot be questioned. In practice, however, this power is little used, there being a majority of officials on the Imperial Legislative Council—a majority deliberately reserved in the India Councils Act of 1909—the Secretary of State is able to impose his will on the Government of India and to secure the passage of any measure he may frame, regardless of the opinion of the Indian authorities. Legislative Councils have been established both for the whole of India and for the principal provinces. Their constitution and functions are fully described in detailing the powers of the Imperial and Provincial Councils (q. v.). To meet emergencies the Governor-General is vested with the power of issuing ordinances, having the same force as Acts of the Legislature, but they can remain in force for only six months. The power is very little used. The Governor-General-in-Council is also empowered to make regulations, having all the cogency of Acts, for the more backward parts of the country, the object being to bar the operation of the general law and permit the application of certain enactments only.

Bengal Judicial Department.

Sanderson, Sir Lancelot	Chief Justice.
Teunon, The Hon'ble Mr. William, I.C.S.	Puisne Judge.
Woodroffe, The Hon'ble Sir John George, M.A., Bar-at-Law.	Ditto.
Mukharji, The Hon'ble Sir Ashutosh, Kt., C.S.I., M.A., D.L.	Ditto.
Richardson, The Hon'ble Mr. Thomas Willata, I.C.S., Bar-at-Law.	Ditto.
Walmsley, The Hon'ble Mr. Hugh, I.C.S.	Ditto.
Rankin, The Hon. Mr. George Claus, Bar-at-Law. ..	Ditto.
Fletcher, The Hon'ble Mr. Ernest Edward, Bar-at-Law	Ditto.
Greaves, The Hon'ble Mr. William, Ewart	Ditto.
Syed Shamsul-Huda, Hon'ble Nawab Sir, K.C.I.E. ..	Ditto.
Chatarji, The Hon'ble Mr. Nalini Ranjan, M.A., B.L. ..	Ditto.
Chaudhuri, The Hon. Sir Asutosh, Bar-at-Law ..	Ditto.
Newbould, The Hon'ble Mr. B. B.	Ditto.
Beachcroft, The Hon'ble Mr. Charles Porten, I.C.S. ..	Ditto.
Ghosh, The Hon. Mr. Charn Chander, Bar-at-Law ..	Ditto.

Bengal Judicial Department—contd.

Gibbons, The Hon'ble Mr. Thomas Clarke Pilling, K.C.	Advocate-General.
Satish Ranjan Das, Bar-at-Law.	Standing Counsel.
Kesteven, The Hon'ble Mr. Charles Henry	Government Solicitor.
Duval, The Hon. Mr. H. P., I.C.S.	Superintendent and Remembrancer of Legal Affairs.
Orr, John Williams, Bar-at-Law.. .. .	Deputy Superintendent and Remembrancer of Legal Affairs.
Ram Charan Mitra	Senior Government Pleader.
Hume, J. T.	Public Prosecutor, Calcutta.
Hechle James, Herbert	Registrar, Keeper of Records, Taxing Officer, Accountant-General, and Sealer, etc., Original Jurisdiction.
Remfry, Maurice	Registrar in Insolvency, Original Side.
Nalini Mohan Chatarji, Bar-at-Law	Master and Official Referee.
Ryper, George	Dy. Registrar.
Bonnaud, William Augustus, Bar-at-Law	Clerk of the Crown for Criminal Sessions.
Kirkham, Joseph Alfred	Secretary to the Chief Justice and Head Clerk, Decree Department.
Edgley, Norman George Armstrong, I.C.S.	Registrar and Taxing Officer, Appellate Jurisdiction.
Counsell, Frank Bertram	Deputy Registrar. (On leave).
Paulit, Peter Sydenham	Assistant Registrar.
Grey, Charles Edward, Bar-at-Law	Administrator-General and Official Trustee.
Bonnerjee, K. K. Shelly, Bar-at-Law	Official Receiver, sub. <i>pro tem</i> .
Dobbin, F. K., Bar-at-Law	Coroner of Calcutta.
Falkner, George McDonald	Official Assignee.
Bose, B.D., Bar-at-Law	Editor of Law Reports.

Bombay Judicial Department.

Macleod, The Hon. Sir Norman Cranstoun, Bar-at-Law.	Chief Justice.
Shah, The Hon'ble Mr. Lallubhai Asharam, M.A., LL.B.	Puisne Judge.
Marten, The Hon. Mr. A. B.	Ditto.
Pratt, The Hon. Mr. Edward Millard, I.C.S.	Ditto.
Heaton, The Hon'ble Sir Joseph John, I.C.S.	Ditto.
Hayward, The Hon'ble Mr. Maurice Henry Weston, LL.B.	Ditto.
Abdeali Muhammadali Kaziji, The Hon. Mr.	Ditto.
Strangman, the Hon'ble Mr. T. J.	Advocate-General.
French, George Douglas	Remembrancer of Legal Affairs.
Milne, Robert Blair, M.A., I.C.S.	Assistant Remembrancer of Legal Affairs.
Bowen, J. C. G.	Government Solicitor and Public Prosecutor.
Campbell, Henry.	Clerk of the Crown.
Weldon, Walton Langford, Bar-at-Law.	Reporter to the High Court.
Mitchell, H. C. B.	Administrator-General and Official Trustee.
Phirozshah Behramji Malbari, Bar-at-Law	Prothonotary, Testamentary and Admiralty Registrar.
Hirjibhai Hormasji Wadia, M.A.	Master and Registrar in Equity and Commissioner for taking Accounts and Local Investigations, and Taxing Officer.
Purshottamdas Thakordas, the Hon. Mr.	Sheriff.
Allison, Frederick William, B.A., I.C.S.	Registrar, Appellate Side.
Nasarwanji Dinshahji Gharda, B.A., LL.B.	Deputy Registrar and Sealer, Appellate Side.
King, A. R.	Acting Coroner.

Bombay Judicial Department—contd.

COURT OF THE JUDICIAL COMMISSIONER OF SIND.

Fawcett, Charles Gordon Hill, I.C.S.	Judicial Commissioner. (On combined leave.)
Kincaid, The Hon. Mr. Charles Augustus, C.V.O., I.C.S.	Acting Judicial Commissioner.
Crouch, Henry Newton, LL.B., Bar.-at-Law	Additional Judicial Commissioner. (On furlough).
Crump, The Hon. Mr. Louis Charles, I.C.S.	Additional Judicial Commissioner.
DeSouza, Dr. Francis Xavier, Bar.-at-Law, I.C.S.	Ditto.

THE INDIAN POLICE.

The Indian Government employ 203,471 Officers and men in the Indian Police. The total cost of maintaining the Force is Rs. 4,330,890 according to the latest figures available, but this total has been considerably raised in the past year or two on account of increases of pay and allowances made on account of the increased cost of living. In large cities, the Force is concentrated and under direct European control; in the mofussil the men are scattered throughout each District and located at various Outposts and Police Stations. The smallest unit for administrative purposes is the Outpost which generally con-

sists of 3 or 4 Constables under the control of a Head Constable. Outpost Police are maintained to patrol roads and villages and to report all matters of local interest to their superior, the Sub-Inspector. They have no powers to investigate offences and are a survival of the period when the country was in a disturbed state and small bodies of Police were required to keep open communications and afford protection against the raids of dacoits. It is an open question whether they are now of much use. Each Outpost is under a Police Station which is controlled by an officer known as a Sub-Inspector.

Distribution of Police.—The area of a Police Station varies according to local conditions. The latest figures available are :—

Police Station varies according to local conditions.

		Average area per Police Station.	Average number of Regular Civil Police per 10,000 of Population.
		Square miles.	
Bengal *	126	4·8

Bombay *	252	15·0

* Excluding the towns of Calcutta, Bombay and Rangoon. The figures include the Railway police, but not Military police.

Organisation of Police.

The Police Station Officer (the Sub-Inspector) is responsible for the investigation of all cognisable crimes, that is to say, all offences in which the Police can arrest without a warrant from a Magistrate, which occur within his jurisdiction; he is also held responsible for the maintenance of the public peace and the prevention of crime. From the point of view of the Indian Ryot, he is the most important Police Officer in the District and may rightly be considered the backbone of the Force.

Districts, is divided into 2 Sub-divisions—one of which is given to an Assistant Superintendent of Police, a European gazetted Officer. The Police Force in each District is controlled by a District Superintendent of Police, who is responsible to the District Magistrate (Collector or Deputy Commissioner) for the detection and prevention of crime and for the maintenance of the public peace, and, to his Deputy Inspector-General and Inspector-General, for the internal administration of his Force. Eight or ten Districts form a Range administered by a Deputy Inspector-General, an officer selected from the ranks of the Superintendents. At the head of the Police of each Province is the Inspector-General who is responsible to the Local Government for the administration of the Provincial Police.

Superior to the Sub-Inspector is the Inspector who holds charge of a Circle containing 4 or 5 Police Stations. His duties are chiefly those of supervision and inspection. He does not ordinarily interfere in the investigation of crime unless the conduct of his subordinates renders this necessary.

Separate but recruited from the District Force is the Criminal Investigation Department, which is under the control of a specially selected European Officer of the rank and

The Inspector is usually a selected and experienced Sub-Inspector. Each District contains 3 or 4 Circles, and in the case of large

standing of a Deputy Inspector-General. The Criminal Investigation Department, usually called the C. I. D., is mainly concerned with political inquiries, sedition cases and crimes with ramifications over more than one District or which are considered too important to leave in the hands of the District Police. It is a small force of Sub-Inspectors and Inspectors who have shown their ability and intelligence when working in the mofussil and forms in each Province a local Scotland Yard.

The larger Cities of Calcutta, Bombay, and Madras have their own Police Force, independent of the Inspector-General of Police, and under the control of a Commissioner and 2 or more Deputies. For Police purposes each city is divided into divisions; in Calcutta each division is in charge of a Deputy Commissioner of Police; in Bombay and Madras of a Superintendent, these officers being selected from the European ranks of the City Force. In Bombay, however, the Superintendents are Gazetted Officers. Each division is sub-divided into a small number of Police Stations, the station being in charge of an Inspector assisted by Indian Sub-Inspectors and European Sergeants.

The Supreme Government at Delhi and Simla keeps in touch with the Provincial Police by means of the Director of Criminal Intelligence and his Staff. The latter do not interfere in the Local Administration and are mainly concerned with the publication of information regarding international criminals, inter-provincial crime and Political inquiries in which the Supreme Government is interested.

Recruitment.—The constable is enlisted locally. Certain castes are excluded from service and the formation of cliques by filling up the Force from any particular caste or locality is forbidden. In some Provinces a fixed percentage of foreigners must be enlisted. Recruits must produce certificates of good character and pass a medical test. They must be above certain standards of physical development. The constable rises by merit to the rank of Head Constable and, prior to the Police Commission, could rise to the highest Indian subordinate appointments. Since 1906, his chances of promotion have been greatly curtailed; this has certainly lowered the standard coming forward for service in the Force in the lower ranks.

The Sub-Inspector, until 1906, was a selected Head Constable, but Lord Curzon's Commission laid down that Sub-Inspectors should be recruited direct from a socially better class of Indians. In most Provinces, eighty per cent. of the Sub-Inspectors are selected by nomination, trained for a year or 18 months at a Central Police

School, and, after examination, appointed direct to Police Stations to learn their work by actual experience. It is too early to judge this system by results, but it has no doubt great disadvantages and undetected crime in India is increasing rapidly.

An Inspector is generally a selected Sub-Inspector. Direct nomination is the exception, not the rule.

The Deputy Superintendent, a new class of officer; instituted on the recommendation of the Commission, is an Indian gazetted officer and is the native Assistant to the District Superintendent of Police. He is either selected by special promotion from the ranks of the Inspectors or is nominated direct, after a course at the Central Police School.

Prior to 1893, the gazetted ranks of the Force were filled either by nomination or by regimental officers seconded from the Army for certain periods. In 1893, this system was abandoned and Assistant Superintendents were recruited by examination in London. On arrival in India, they were placed on probation until they had passed their examinations in the vernacular, in law, and in riding and drill. The establishment of Police Training Schools in 1906 has done much to improve the training of the Police Probationer, and selection by examination has given Government a better educated officer, but open competition does not reveal the best administrators and should be tempered, as in the Navy, by selection.

Internal Administration.—The District Force is divided into 2 Branches—Armed and Unarmed. As the duties of the armed branch consist of guarding Treasuries, escorting treasure and prisoners and operating against dangerous gangs of dacoits, they are maintained and controlled on a military basis. They are armed and drilled and taught to shoot after military methods. The unarmed branch are called upon to collect fines magisterially inflicted, serve summonses and warrants, control traffic, destroy stray dogs, extinguish fires, enquire into accidents and non-cognizable offences. The lower grades are clothed and housed by Government without expense to the individual. The leave rules are fairly liberal, but every officer, European or Native, must serve for 30 years before he is entitled to any pension, unless he can obtain a medical certificate invaliding him from the service. This period of service in an Eastern climate is generally admitted to be too long and the efficiency of the Force would be considerably improved if Government allowed both the officers and men to retire after a shorter period of service.

STATISTICS OF POLICE WORK.

The undesirability of attaching undue importance to statistical results as a test of the merits of police work was a point upon which considerable stress was laid by the Indian Police Commission, who referred to the evils likely to result from the prevalence among subordinate officers of an impression that the advancement of an officer would depend upon his being able to show a high

ratio of convictions, both to cases and to persons arrested, and a low ratio of crime. The objection applies more particularly to the use of statistics for small areas; but they cannot properly be used as a basis of comparison even for larger areas without taking into account the differences in the conditions under which the police work; and, it may be added, they can at the best indicate only very

imperfectly the degree of success with which the police carry out that important branch of their duties, which consists in the prevention of crime. These considerations have been emphasized in recent orders of the Government of India. Subject to these observations,

the figures below may be given as some indication of the volume of work falling upon the police, and of the wide differences between the conditions and the statistical results in different provinces:—

Administrations.	Number of Offences reported.	Number of Persons under Trial.	Persons whose cases were disposed of				Persons remaining under Trial at the end of the Year.	
			Dis-charged or Acquitted.	Con- victed.	Com- mitted or Referred.	Died, Escaped or Trans- ferred to another Province.

* Including some cases of cattle theft.

JAILS.

Jail administration in India is regulated generally by the Prisons Act of 1894, and by rules issued under it by the Government of India and the local governments. The punishments authorised by the Indian Penal Code for convicted offenders include transportation, penal servitude, rigorous imprisonment (which may include short periods of solitary confinement), and simple imprisonment. Accommodation has also to be provided in the jails for civil and under-trial prisoners.

The origin of all jail improvements in India in recent years was the Jail Commission of 1889. The report of the Commission, which consisted of only two members, both officials serving under the Government of India, is extremely long, and reviews the whole question of jail organization and administration in the minutest detail. In most matters the Commission's recommendations have been accepted and adopted by Local Governments, but in various matters, mainly of a minor character, their proposals have either been rejected *ab initio* as unsuited to local conditions, abandoned as unworkable after careful experiment or accepted in principle but postponed for the present as impossible.

The most important of all the recommendations of the Commission, the one that might in fact be described as the corner stone of their report, is that there should be in each Presidency three classes of jails: in the first place, large **central jails** for convicts sentenced to more than one year's imprisonment; secondly, **district jails**, at the head-quarters of districts; and, thirdly, **subsidiary jails** and "lock-ups" for under-trial prisoners and convicts sentenced to short terms of imprisonment. The jail department in each province is under the control of an Inspector-General; he is generally an officer of the Indian Medical Service with jail experience, and the Superintendents of certain jails are usually recruited from the same service. The district jail is under the charge of the civil surgeon, and is frequently inspected by the district magistrate. The staff under the Superintendent includes, in large central jails, a Deputy Superintendent to supervise the jail manufactures, and in all central and district jails one or more subordinate medical officers. The executive staff consists of jailors and warders, and convict petty officers are employed in all central and district jails, the prospect of promotion to one of these posts being a strong inducement to good behaviour. A Press Note issued by the Bombay Government in October, 1915, says:—"The cadre and emoluments of all ranks from Warder to Superintendent have been repeatedly revised and altered in recent years. But the Department is not at all attractive in its lower grades. The two weak spots in the jail administration at the moment are the insufficiency of Central Prisons and the difficulty of obtaining good and sufficient warders."

Employment of Prisoners.—The work on which convicts are employed is mostly carried on within the jail walls, but extramural employment on a large scale is sometimes allowed, as, for example; when a large

number of convicts were employed in excavating the Jhelum Canal in the Punjab. Within the walls prisoners are employed on jail service and repairs, and in workshops. The main principle laid down with regard to jail manufactures is that the work must be penal and industrial. The industries are on a large scale, multifarious employment being condemned, while care is taken that the jail shall not compete with local traders. As far as possible industries are adapted to the requirements of the consuming public departments, and printing, tent-making, and the manufacture of clothing are among the commonest employments. Schooling is confined to juveniles; the experiment of teaching adults has been tried, but literary instruction is unsuitable for the class of persons who fill an Indian jail.

The conduct of convicts in jail is generally good, and the number of desperate characters among them is small. Failure to perform the allotted task is by far the most common offence. In a large majority of cases the punishment inflicted is one of those classed as "minor." Among the "major" punishments fetters take the first place. Corporal punishment is inflicted in relatively few cases, and the number is steadily falling. Punishments were revised as the result of the Commission of 1889. Two notable punishments then abolished were shaving the heads of female prisoners and the stocks. The latter, which was apparently much practised in Bombay, was described by the Commission as inflicting exquisite torture. Punishments are now scheduled and graded into major and minor. The most difficult of all jail problems is the internal maintenance of order among the prisoners, for which purpose paid warders and convict warders are employed. With this is bound up the question of a special class of well-behaved prisoners which was tried from 1905 onwards in the Thaná Jail.

Juvenile Prisoners.—As regards "youthful offenders"—i.e., those below the age of 15—the law provides alternatives to imprisonment, and it is strictly enjoined that boys shall not be sent to jail when they can be dealt with otherwise. The alternatives are detention in a reformatory school for a period of from three to seven years, but not beyond the age of 18; discharge after admonition; delivery to the parent or guardian on the latter executing a bond to be responsible for the good behaviour of the culprit; and whipping by way of school discipline.

The question of the treatment of "young adult" prisoners has in recent years received much attention. Under the Prisons Act, prisoners below the age of 18 must be kept separate from older prisoners, but the recognition of the principle that an ordinary jail is not a fitting place for adolescents (other than youthful habituals) who are over 15, and therefore ineligible for admission to the reformatory school, has led Local Governments to consider schemes for going beyond this by treating young adults on the lines followed at Borstal, and considerable progress has been made in this direction. In 1905, a special class for selected juveniles and young adults was established at the Dharwar

jail in Bombay; in 1908 a special juvenile jail was opened at Alipore in Bengal; in 1909 the Meiktila jail in Burma and the Tanjore jail in Madras were set aside for adolescents, and a new jail for juvenile and "juvenile adult" convicts was opened at Bareilly in the United Provinces; and in 1910 it was decided to concentrate adolescents in the Punjab at the Lahore District jail, which is now worked on Borstal lines. Other measures had previously been taken in some cases; a special reformatory system for "juvenile adults" had, for example, been in force in two central jails in the Punjab since the early years of the decade, and "Borstal enclosures" had been established in some jails in Bengal. But the public is slow to appreciate that it has a duty towards prisoners, and but little progress has been made in the formation of Prisoners' Aid Societies except in Bombay and Calcutta, though even in those cities much remains to be done.

Reformatory Schools.—These schools have been administered since 1899 by the Education department, and the authorities are directed to improve the industrial education of the inmates, to help the boys to obtain employment on leaving school, and as far as possible to keep a watch on their careers.

Transportation.—Transportation is an old punishment of the British Indian criminal law, and a number of places were formerly appointed for the reception of Indian transported convicts. The only penal settlement at the present time is Port Blair in the Andaman Islands. Under existing rules convicts sentenced to transportation for life, or for a term of years of which six have still to run, may be transported to the Andamans, subject to their being physically fit, and to some other conditions in the case of women. The sanctioned scheme contemplates five stages in the life of a male transported convict, the first six months being passed in a cellular jail, the next eighteen months in association in a jail similar to those of the Indian mainland, and the following three years as a convict of the third class kept to hard gang labour by day and confined in barracks by night. Having thus completed five years, a convict may be promoted to the second class, in which he is eligible for employment in the various branches of the Government services or in the capacity of servants to a private resident. After five years so spent, a well-behaved convict enters the first class, in which he labours under more favourable conditions, or is granted a ticket enabling him to support himself, with a plot of land. He may now send for his family or marry a female convict. The three later stages of this discipline have been in force for many years, and the first for some time, the cellular jail having been finished in 1905; but the associated jail for the second stage has not yet been built. Females are kept at intramural work under strict jail discipline for three years; for the next two years they are subjected to a lighter discipline, and at the end of five years they may support themselves or marry. Promotion from class to class depends on good conduct. The convicts are employed in jail service, in the erection and repair of jail buildings, in the commissariat, medical, marine, and forest departments, in tea-gardens and at other agricultural work, and in various jail manu-

factures. Ordinary male convicts sentenced to transportation for life are released, if they have behaved well, after twenty years, and persons convicted of dacoity and other organised crime after twenty-five. *Thags* and professional prisoners are never released. Well-behaved female convicts are released after fifteen years. The release is sometimes absolute and sometimes, especially in the case of dacoits, subject to conditions, *e.g.*, in regard to residence. In some cases released convicts prefer to remain in the settlement as free persons. The settlement is administered by a superintendent, aided by a staff of European assistant and Indian subordinates. The convict population of Port Blair amounted in 1915-16 to 12,425, consisting of 11,864 males and 561 females. The total population of the settlement was 17,331.

Commission of Enquiry, 1919.—A committee was appointed to investigate the whole system of prison administration in India with special reference to recent legislation and experience in Western countries. The constitution of the committee is as follows: Chairman: the Hon'ble Sir Alexander Gardew, K.C.S.I., Member of the Executive Council, Madras. Members: the Hon'ble Sir James Du-Boulay, K.C.I.E., C.S.I., Secretary to the Government of India, Home Department; Lt.-Col. J. Jackson, C.I.E., I.M.S.; Inspector-General of Prisons, Bombay; Lt.-Col. Sir Walter J. Buchanan, K.C.I.E., I.M.S., Inspector-General of Prisons, Bengal; Khan Bahadur Hamid Hussain, Delhi; Mr. D. M. Durai Raja, B.A., B.L., Madras; Mr. N. G. Mitchell-Innes, Inspector of Prisons, Home Office, London. Secretary: Mr. D. Johnston, I.C.S.

The Committee's inquiries have particular reference to the following subjects, namely:—

(1) The efficiency and appropriateness of the existing systems of prison administration and restraint on liberty in India, including the Andamans and any settlements constituted under the Criminal Tribes Act, 1911; (2) the possibility of strengthening the reformatory influence of prison administration and discriminating in regard to the treatment of criminals of different classes and ages and, (3) the best means of assisting prisoners after release to regain a position in society.

Reasons for Inquiry.—A Government of India resolution explained that this fresh investigation is consistent with the manner in which prison management has developed in this country. Four general enquiries have already been held in the years 1838, 1864, 1877, and 1888-89, respectively, into the whole question of the administration of jails. As a general statement, it is not unfair to say that attention has mainly been directed hitherto to the improvement of prison administration on lines and on a standard which, in recent times, have undergone considerable modifications at any rate in the West. This was indeed inevitably the case when an attempt was first made in 1838 to deal with the subject comprehensively and thoroughly. The foundations of an efficient system had practically still to be made. Diversity of practice in different provinces was the rule rather than the exception, and this complaint recurs even in connection with the latest inquiry of 1888-89. The

Prisons Act of 1894 (Act IX of 1894) was the first recognition by the legislature that in certain respects uniformity must be insisted upon and its enactment was the result of Surgeon-Major Lethbridge's recommendations as subsequently re-examined in 1891-92 by a departmental committee.

Modern Developments.—A further reason for this investigation is that ideas on the subject of the treatment of prisoners have advanced rapidly in recent years, largely under the stimulus of Quinquennial International Conferences of which the first was held in London in 1872 and the latest in America in 1910, and the deliberations of these bodies point to the importance of reformatations as a main end to be sought for in a large number of cases. The Probation of Offenders' Act, 1907, the Prevention of Crimes Act, 1908, and the Children's Act of the latter year are all instances of modern legislation on the subject, of which the Borstal system (with the Aftercare Borstal Association, and the encouragement given to the Discharged Prisoners' Aid Societies are conspicuous results. The Government of India are well aware of the differences in prison practice in England and India, and they do not desire in any way to imply that all the latest experiments of the West are necessarily suitable for introduction in the East, but they are of opinion that the

subject well merits detailed expert examination if the prevalent system in this country is to be saved from the reproach that it is failing to keep pace with modern ideas. It is true that in various provinces experiments with the Borstal system and with preventive methods applied to criminal tribes are being made, but action is being taken by provinces individually and the scrutiny and co-ordination of the results attained are likely to ensure that the lines of future policy are defined and mistakes avoided in the early stages. Exact uniformity of procedure in all the provinces is no doubt impossible, and possibly undesirable, but with adaptation or degree and detail to varying local conditions, there is no reason why the general principles governing the treatment of criminals should not be the same throughout the country.

There remains the very important subject of transportation, about which much has been written in the past and into a discussion of the merits of which it is not proposed to enter, but recent inquiries and events have led the Government of India to doubt whether the administration of the Andamans as a penal settlement is not susceptible with advance of material change or whether in fact, the continuance of the settlement in its present shape is in itself expedient, an inquiry in this direction may be expected to yield results of special value.

The variations of the jail population in British India during five years are shown in the following table:—

—	1916.	1915.	1914.	1913.	1912.	1911.
Jail population of all classes on 1st January	122,282	112,015	105,555	101,908	91,876	102,991
Admissions during the year	550,971	568,280	516,098	492,308	492,820	470,513
Aggregate	673,253	680,295	621,653	594,216	584,696	573,504
Discharged during the year from all causes	557,525	558,008	509,638	488,677	482,786	481,022
Jail population on 31st December	115,728	122,287	112,015	105,539	101,910	91,882
Convict population on 1st January	107,806	98,963	92,913	89,287	79,668	91,505
Admissions during the year	173,441	180,466	168,723	160,851	159,424	152,396
Aggregate	281,247	279,429	261,636	250,138	239,092	243,901
Released during the year	175,587	168,508	159,468	154,494	147,292	151,936
Transported beyond seas	1,535	1,486	1,319	1,566	1,382	1,138
Casualties, &c.	2,900	2,616	2,429	2,053	2,084	2,222
Convict population on 31st December.	102,208	107,811	98,963	92,913	89,287	79,668

The daily average number of prisoners, which had steadily decreased since 1908, rose slightly in 1913 to nearly the figure of 1911. The fall in 1912 was, however, largely attributable to the release of convicts and civil prisoners on the occasion of the Delhi Durbar. The increase in 1913 was distributed among all provinces except the United Provinces of Agra and Oudh and Coorg, in which the figures continued to show decreases.

More than one-half of the total number of convicts received in jails during 1918 came from the classes engaged in agriculture and cattle tending, over 141,000 out of 166,000 are returned as illiterate.

The percentage of previously convicted prisoners was 19·65 as against 19·93 in 1917 while the number of youthful offenders rose from 327 to 364. The following table shows the nature and length of sentences of convicts admitted to jails in 1916 to 1918 :—

Nature and Length of Sentence.	1918.	1917.	1916.
Not exceeding one month	37,061	39,063	42,669
Above one month and not exceeding six months..	66,466	63,124	66,388
„ six months „ „ one year ..	34,018	31,488	34,725
„ one year „ „ five years ..	22,371	21,154	23,962
„ five years „ „ ten „ ..	2,966	2,564	2,631
Exceeding ten years	309	212	345
Transportation beyond seas—			
(a) for life	1,385	1,313	1,197
(b) for a term	859	705	745
Sentenced to death	763	752	791

The total daily average population for 1918 was 97,253; the total offences dealt with by criminal courts was 169, and by Superintendents 131,532. The corresponding figures for 1917 were 96,980, 179 and 144,237 respectively.

The total number of corporal punishments again showed a decrease, viz., from 265 to 217. The total number of cases in which penal diet (with and without solitary confinement) was prescribed was 4,628 as compared with 5,507 in the preceding year

Total expenditure increased from £652,582 to £750,826, and total cash earnings from £95,309 to £96,450; there was, consequently, an increase of £96,649 in the net cost to Government.

The death rate increased from 18·83 per mille in 1917 to 41·97 in 1918. The admissions to hospital were higher, and the daily average number of sick rose from 27·61 to 36·65. The chief causes of death were tubercle of the lungs, dysentery and pneumonia.

The Laws of 1919

BY

RATANLAL AND DHIRAJLAL

(Editors, "Bombay Law Reporter").

ALTHOUGH the war-cloud has happily lifted itself, yet the legislation seems to be surcharged with the after-effects of the war. The post-war problems that have followed in the wake of the war will demand the best attention of the legislator in India as in other countries also.

1. The Local Authorities Pensions and Gratuity Act.—The law hitherto empowered the local authorities to grant pensions and gratuities to employes who might be wounded and to the families of employes who might be killed in execution of their duty. This Act does a step further and enables the local authority to grant a pension or a gratuity to an employe or to his family when he has been incapacitated or has lost his life in the service of the State. It is, therefore, enacted that the local Government may grant a pension or gratuity to any officer thereof who may, since the 4th August 1914, have been wounded or otherwise incapacitated in the service of Government or to the widow or child of any such officer who may have died in consequence of injuries received or illness contracted since the 4th August 1914 in the course of such service (s. 3). This extra grant may be in addition to the pension or gratuity granted already; it will not ordinarily exceed the amount of pension or gratuity payable in case his employment had been for service for the same time and on the same pay under Government (s. 4).

2. The Indian Paper Currency (Amendment) Act.—On the 7th December, 1918, the Governor-General of India promulgated an Ordinance increasing the maximum limit for the issue of Currency Notes against British Treasury Bills by fourteen crores of rupees to thirty crores of rupees. The present Act embodies the provisions of that Ordinance.

3. The Motor Spirit (Duties) Amendment Act.—In February 1917, the Government of India passed Act II of 1917 providing for the imposition and levy of an excise and customs duty of six annas a gallon of motor spirit. The duty was imposed as a war measure to conserve the use of motor spirit in India. As much it has served out its purposes and is timed to expire at the end of six months after the conclusion of the war. But the tax which originated in administrative necessities, has been found in its working to be a useful source of revenue. The duration clause has therefore been removed and the Act placed permanently in the Indian Statute Book.

4. The Income Tax (Amendment) Act.—This Act raises the minimum limit of taxable income from Rs. 1,000 to Rs. 2,000 per annum. It came into force on the 1st April 1919. The schedule under the new Act stands as below:—

1. No tax: when the taxable income is less than Rs. 2,000

2. Five pias in the rupee: when the taxable income is more than Rs. 2,000 and less than Rs. 5,000.

3. Six pias in the rupee: when the total income is more than Rs. 5,000 but is less than Rs. 10,000.

4. Nine pias in the rupee: when the total income is more than Rs. 10,000 but is less than Rs. 25,000.

5. One anna in the rupee: when the total income is Rs. 25,000 or upwards.

5. The Termination of the Present War (Definition) Act.—During the continuance of the war a number of emergency Acts have been passed and have been timed to exist during the continuance of the war and for six months thereafter. The war came to an end as a fact on the 11th November 1918; but though more than a year has elapsed since then, the peace terms are not yet finally settled. It is necessary, therefore, to keep in existence all the emergency measures till peace is firmly settled. An artificial date will therefore be fixed for the termination of the war. A statute (8 & 9 Geo. V, c 59) has already been passed in England for the purpose. The present Act is on the lines of the English Statute and provides that the present war shall be treated as having continued to and as having ended on such date as His Majesty in Council may declare in that behalf in pursuance of the provisions of the Termination of the Present War (Definition) Act, 1918 (s 2).

6. The Indian Oaths (Amendment) Act.—The provisions of the Indian Oaths Act 1873 do not apply to proceedings before Courts Martial or oaths and prescribed by any law (s. 3). They are further made inapplicable to oaths, affirmations or declarations prescribed "by or under any Instruction under the Royal Sign Manual of His Majesty" (s. 2). The reason for this exclusion is that s. 16 of the Oaths Act of 1876 abolished official oaths. These have been now revived, for it has been found that the assumption of their high offices by Governor-General, Members of Executive Councils and Chief Commissioners is hitherto lacking in any formality of a nature to mark the serious nature of the occasion or the weight of responsibility involved. The effect of this Act is that oaths or affirmations of allegiance and office should in future be taken with due solemnity by the officials concerned at the time of entering upon the discharge of their duties.

7. The Indian Defence Force (Amendment) Act.—In the ordinary course of events, the Indian Defence Force Act of 1917 is timed to expire after six months from the conclusion of the war. That period is by this Act extended to one year. The Indian Defence Force which

has been called into existence owing to the exigencies of the war it has been found necessary to maintain under post-bellum conditions at any rate till the demobilisation of the regular army is completely carried out.

8. The Negotiable Instruments (Amendment) Act.—In the case of *Dosabhai v. Virchand* reported in the *Bombay Law Reporter*, Vol. XXI, p. 1, Mr. Justice Hayward held that a cheque from which the word "bearer" has been struck out and if there is no substitution of the word "order" is not negotiable within the meaning of the Negotiable Instruments Act 1881. There was a custom of trade in the Bombay market which regarded such cheques as order cheques; but the learned Judge treated the custom as void. The present Act has been enacted to negative the effect of the decision and now such cheques are to be treated as order cheques. It relieves traders from considerable inconvenience.

9. The Punjab Courts (Supplementing) Act.—On the 1st of April 1919, a High Court of Judicature was established for the Province of the Punjab at Lahore by Royal Letters Patent. It replaced the Punjab Chief Court, which till then was the Supreme Court of Judicature within that Province. The pending work of the Chief Court had to be transferred to the newly instituted High Court. This Act therefore enacts that all suits, appeals, revisions, applications, reviews, executions and other proceedings whatsoever, whether Civil or Criminal, pending in the Chief Court shall be continued and concluded in the High Court at Lahore as if the same had been instituted in such High Court (s. 2).

10. The Excess Profits Duty Act.—This is a purely emergency measure due to war conditions. It was introduced as a bill on the 13th December 1918 and declared to have come into force on the 20th March 1919. In principle, it is not open to any serious objection. Persons who have reaped excess profits owing to war conditions are called upon to contribute fifty per cent. of their excess profits to the State exchequer. All incomes below thirty thousand rupees are exempted upon the operation of this Act. The operative section provides "Subject to the provisions of this Act, there shall in respect of any business to which this Act applies, be charged, levied and paid on the amount by which the profits in the accounting period exceed the standard profits, a duty of an amount equal to fifty per cent. of that excess. Provided that the amount of the said duty shall not exceed such sum as would reduce the profits in the accounting period below thirty thousand rupees" (s. 4). What the standard profits are has been defined by s. 6. They mean: (1) an amount calculated at the rate of 10 per cent. or at such rate not being less than 10 per cent. as may be prescribed, on the capital of the business as existing at the end of the accounting period, or (2) at the option of the person by whom the duty is payable (i) if the profits of the business have been assessed in 1913 and 1914 for the purposes of income tax—the aggregate of half of the profits so assessed and half of the interests, if any, received in these years on securities forming part of the assets of the business;

or (ii) if the profits of the business have been assessed for the said purposes in 1913 and 1914 and in two only of three years 1915, 1916, 1917—the aggregate of one-fourth of the profits so assessed; or (iii) if the profits of the business have been assessed for the said purposes in all the five years 1913 to 1917—the aggregate of one-fourth of profits assessed in the years 1913 and 1914 and in each two of the years 1915, 1916 and 1917 as may be selected by the said person. Power is given to the Collector by s. 7 to make allowances for special circumstances; and appeal against assessment is provided to the Chief Revenue authority (s. 8). The Governor-General in Council is also authorised to deal with hardship in case of a class of business (s. 9). When an income is liable to be assessed to excess profits duty as well as to super-tax, it will be charged only once and with the tax which yields the highest duty (s. 19). There have been certain exemptions from the operation of this Act. They are:— (1) any business the income of which is agricultural income; (2) offices or employments; (3) any profession depending on the personal qualification of the person by whom the profession is carried on.

11. The Anarchical and Revolutionary Crimes Act.—This is what is popularly known as the **Rowlatt Act**. Probably no other Act of the Indian Legislature has touched Indian susceptibility to the extent that this Act has done. It was passed against the unanimous opinion of the elected non-official members of the Indian Legislative Council. It is a temporary measure timed to live for three years certain. It owes its origin to the recommendations made by the Committee presided over by Sir Sidney Rowlatt, a Judge of the King's Bench Division in England. The Committee was appointed in 1917, among other things, to examine and consider the difficulties that have arisen in dealing with conspiracies and to advise as to the legislation, if any, necessary to enable the Government to deal effectively with them. The Act contains several parts. Part 1 deals with the trial of offenders and defines offences, establishes Courts and provides procedure to be followed at trials. The provisions of the Act can be put into force in any area only by a notification published in the *Gazette of India*, and that too where the Governor-General in Council is satisfied that anarchical or revolutionary movements are being promoted and that scheduled offences in connection with such movements are prevalent to such an extent that it is expedient in the interest of public safety to provide for the speedy trial of such offences (s. 3). The initiation of proceedings under the Act can only be by the Local Government ordering any officer of Government to prefer a written information to the Chief Justice against any person. The information must state the offence charged and the known name and place of residence and occupation of the accused, and the time and place when and where the offence is charged to have been committed and all particulars, within the knowledge of the prosecution, of what is intended to be proved against the accused. A copy of the information should be served on the accused (s. 4). The trial of the case begins before a special bench of three Judges of the

High Court nominated by the Chief Justice (s. 5). The place of sitting may be fixed or varied (s. 6). The provisions of the Criminal Procedure Code are made applicable so far as they are not repugnant to the Act (s. 7). The trial is to commence by reading of the information and the prosecutor has to state shortly the evidence he expects to lead for the prosecution. The Court is to follow the procedure prescribed by the Criminal Procedure Code for the trial of warrant cases by Magistrates (s. 8). If a charge is framed, the Court is bound to grant an adjournment of 14 days, if the accused so desires (s. 9). At the trial the evidence of each witness is to be recorded in full (s. 10). It is open to the Court to prohibit or restrict the publication of reports of trial (s. 11). Section 12 protects the accused in a variety of ways. Till the closing of the case for the prosecution, no questions can be asked to him. Thereafter and before the accused enters on his defence, the Court shall inform him that he can give evidence on oath on his own behalf, but that if he elects to do so, he is liable to be cross-examined. In case he declines the examination, he is liable to be questioned generally on the case as provided in s. 342 of the Criminal Procedure Code; but this process will be saved, if he agrees to be examined. The unwillingness of the accused to be examined on oath does not place him at any disadvantage. The vexed and much debated question of the right of reply by the prosecution is definitely settled. The accused loses his right of reply if he calls and examines any witness (s. 13). If there is any difference of opinion among the members of the Court, the opinion of the majority is to prevail (s. 14). The judgment of the Court is made final and conclusive; and no appeal is allowed from it (s. 17). There are special rules of evidence which go far beyond the provisions of the Indian Evidence Act (I of 1872). When it appears that a witness is dead, or cannot be found or is incapable of giving evidence and it is proved that such death, disappearance or incapacity has been caused in the interests of the accused, then the statement made by such person to a Magistrate and read over, explained to and signed by him may be admitted in evidence (s. 18).

Part II deals with a different state of things. It provides for preventive measures of a precautionary nature and enables Government to bind down persons to good behaviour. The provisions of this part can be put into operation only by a notification in the Gazette of India by the Governor-General in Council and for a particular area. They can come into play only when the Governor-General in Council is satisfied that anarchical or revolutionary movements which are likely to lead to the commission of scheduled offences are being extensively promoted in any area (s. 21). The Local Govt. can then place all the materials in its possession relating to the case before a judicial officer who is qualified for appointment to a High Court and take his opinion thereon. If such officer is satisfied that action is necessary, the Local Government may give all or any of the following directions: such person shall (1) execute bond with or without sureties agreeing that he will not take any

part in any of the offences alleged against him for a period of one year or (2) shall notify his residence and any change of residence; (3) or shall remain or reside in any part of British India; or (4) shall report himself to the officer in charge of the police station nearest to his residence at stated periods (s. 22).

The order under s. 22 is to be served on the person concerned in the manner of a summons (s. 23). The appointment of investigating authority is provided for in s. 30. It is to consist of three persons, two of whom shall be persons who have held judicial office not inferior to that of a District and Sessions Judge and one shall be a person not in the service of the Crown in India. When an order is once passed under s. 22 the Local Government have to submit all the papers in the case to the investigating authority. The inquiry before the investigating authority shall be *in camera*. The accused will in every case be given a reasonable opportunity of appearing before it at some stage of the proceedings. He is to have explained the nature of the charge made against him and he can make any explanation he may have to offer. The investigating authority shall report in writing to the Local Government the conclusions at which it has arrived (s. 26). On receipt of the report, the Local Government may discharge the order passed under s. 22 or may make any other order which is authorised by the section (s. 27). If the accused disobeys the order he is liable to be sentenced to imprisonment for 6 months or to pay a fine of Rs. 500 (s. 28). Provision has also been made for the appointment by Local Government of Visiting Committees, whose function will be to report upon the welfare of persons kept under restraint (s. 31).

Part III of the Act is more general in character. It gives powers to arrest persons and search places. Like the foregoing two parts, it can be put into operation by a notification published in the Gazette of India by the Governor-General in Council. It can be applied to any area where revolutionary or anarchical movements are apprehended. The procedure prescribed for action is briefly as follows. Where the Local Government are of opinion that any person in the prescribed area is concerned in any scheduled offence they are to place all materials before a judicial officer who is qualified for appointment to High Court and take his opinion thereon. If such officer agrees, the Local Government may make an order under s. 22 and may further order (1) the arrest of any such person without warrant; (2) the confinement of any such person in any place and (3) the search of any place specified in the order (s. 34). The arrest, if made, cannot ordinarily extend beyond 7 days; but if the Local Government so directs, it may extend to 14 days (s. 35).

The fourth part deals with persons already under executive control. It provides against the contingency of the expiration of the Defence of India Act which being a war measure is timed to exist during the continuance of the war and for 6 months thereafter. Persons already under detention at that date are to be deemed under detention under the provisions of this part (s. 39). The last two sections

are very general in their scope. Section 42 provides that orders passed under the Act cannot be called in question by the Courts. The last section enacts that the powers given by the Act are in addition to, and not in derogation of, any other powers already conferred by any other enactment.

12. The Poisons Act.—The former Poisons Act I of 1904 was found on experience to be lacking in control. The present Act is meant to give effect to control of Local Governments empowering them to regulate sale of poisons. They are given powers to make rules for (1) grant of licences to persons for poison for sale; (2) the classes of persons to whom licences can be given and the classes of persons to whom the poison may be sold; (3) the maximum quantity that can be sold; (4) the keeping by vendors of register of sales; (5) the safe custody of such poisons and the labelling of vessels and packages in which the poison is kept; and (6) the inspection and examination of such poison (s. 2). The Governor-General of India in Council has the power to prohibit importation into British India of any poison except under a license (s. 3). The Local Government have the power to regulate possession of any poison in any local area (s. 4). Penalty for breach of the provisions of the Act or of the rules made thereunder is, on first conviction, to imprisonment for three months and a fine of Rs. 500; and on second or subsequent conviction, to double the above penalty (s. 6). The District Magistrate and the Sub-Divisional Magistrate and the Commissioner of Police may issue a search warrant if he has reason to believe that any poison is kept at any place in contravention of the Act or its rules (7).

13. The Sea Customs (Amendment) Act.—There already has been local legislation in this country to prevent adulteration of food in general; but no power hitherto existed to prevent importation of adulterated foods and drugs by sea. This defect is sought to be remedied by amendment of s. 195 of the Sea Customs Act (VIII of 1878). The amendment provides that the Customs Collector may take samples of imported drugs or articles intended for consumption as food and submit them for examination by a specified officer of Government. The Act does not involve detention or seizure of the foods by the Customs authorities; but it is calculated to spur the Municipal health officers into action.

14. The Provident Funds (Amendment) Act.—This Act makes provisions for the old age of teachers in non-pensionable service of Government, by making the provisions of Act IX of 1897 applicable.

15. The Calcutta High Court (Jurisdictional Limits) Act.—The limits of the Original Side of the Calcutta High Court had been fixed as early as 1794. The marks and limits which existed then, are no longer to be found. These have been demarcated afresh and defined in this Act.

16. The Indian Naturalization (Amendment) Act.—Hitherto a certificate of naturalization once issued to an alien was liable to be recalled only on proof that the certificate had been obtained by false representations

or fraud. It has been found necessary that the certificate should be cancelled not only on those grounds but also when the person to whom it has been granted has shown himself by act or speech to be disaffected or disloyal to His Majesty or is shown to be otherwise unfit to continue to enjoy the privileges of British nationality. The English Act (5 & 6 Geo. V. c. 17) was accordingly amended in 1918 by (8 & 9 Geo. V. c. 38). The Indian Naturalization Act, XXX of 1882, is also similarly amended.

17. The Land Acquisition (Amendment) Act.—This Act is meant to put the registered societies, within the meaning of Co-operative Societies Act (II of 1912), on a par with companies; and enables them compulsorily to acquire any buildings sites required by them. It is designed to remove the difficulty experienced by those societies to secure sites for buildings.

18. The Repealing and Amending Act 1919.—This is a periodical measure resorted to by the legislature from time to time to weed out surplusage from Indian Acts. It also makes amendment consequent on the conversion of the Punjab Chief Court into the Lahore High Court.

19. The Indian Tariff (Amendment) Act.—This Act enables the Government of India to levy a duty of 15 per cent. on raw hides and skins exported to foreign countries with a rebate of 10 per cent. for hides and skins tanned within the Empire. In other words, raw hides and skins exported to and tanned outside the British Empire are liable to an export duty of 15 per cent.; whilst those exported and tanned within the British Empire are saddled with an export duty of 5 per cent. only. There was an universal consensus of opinion so far as the imposition of duty was concerned; but some objection has been taken to the rebate clause. It cannot be doubted that the effect of the Act will be to encourage the tanning industry in India.

20. The Indian Arms (Amendment) Act.—On the 21st March 1919 the Government of India issued a Resolution (H D. No. 2125c) to the effect that from the 1st January 1920, with very few exceptions, every person of whatever caste, creed or nationality had to obtain a license for fire arms in his possession. This Resolution receives legislative sanction here. This Act also makes provision for custody of fire-arms after the 1st January 1920 when the possessor has not obtained a license.

21. The Indian Coinage (Amendment) Act.—The shortage of silver is sorely felt by every one in this country. It is also felt by Government. They had accordingly to replace two anna silver coins by nickel coins of the same denomination. There are two other small silver coins in circulation, namely, the four-anna and eight-anna pieces. They are also made liable to be converted into nickel currency. The former coin is to be 90 and the latter to be 105 grains troy in weight.

22. The Cantonments (Amendment) Act.—The Cantonment Committee are authorised to prohibit the practice of any profession or of

the carrying on of any trade, calling, or occupation in any part of the Cantonment otherwise than in accordance with the conditions of a license; and to levy fees for the grant and renewal of licenses. The Committee is further authorised to make rules for the suppression of brothels and for the effective prevention of prostitution in Cantonments.

23. The Cinematograph (Amendment) Act.—Before the Cinematograph Act II of 1918 could come into operation, it was found that some modifications were necessary to be introduced into it. The Local Government are given the authority to constitute Certifying Boards, not more than one half of whose members shall be officials. The certificate granted by these Boards are valid in the ordinary course throughout India. The certifying authority is given the power to require production before it of a film already certified by any other authority. It is also enacted that the Act may be introduced into any area piecemeal, in order to allow a preliminary period during which owners of films now in use may submit them to optional certification before the Act comes into force.

24. The Indian Companies Restriction Repealing Act.—During the progress of the war it was found expedient to conserve the monetary resources of the country by placing certain restriction on the power to call up capital by companies already floated or about to be floated. With the termination of the war, the necessity for the conservation having ceased to exist that Act is hereby repealed.

25. The Indian Merchant Shipping Law Amendment Act.—Section 5 of the Indian Merchant Shipping Act (V of 1863) exempts ships in the service of His Majesty or the Government of India from the provisions of the Act relating to investigations into shipping casualties. Section 114 of the Indian Merchant Shipping Act (I of 1859) exempts ships in the service of His Majesty from the provisions of that Act. The result of these exemptions has been that proper investigations cannot be made into shipping casualties occurring in connection with hired transports or of suitable disciplinary measures being taken against officers and crews of such vessels when found guilty of infringements of the shipping law and regulations. This anomaly has therefore been removed; and the exemptions are granted only to ships belonging to His Majesty or the Government of India.

26. The Indian Paper Currency (Further Amendment) Act.—The maximum of Currency

reserve which was fixed at 80 crores of rupees by Act II of 1919 is raised now to Rs. 100 crores, of which 80 crores must be in British Treasury Bills. Opportunity has also been taken to provide for the issue of notes against gold held on behalf of the Secretary of State in the United States of America or in transit therefrom to India.

27. The Indemnity Act.—Probably no Act of legislature has evoked more bitter controversy and sturdy opposition to its passing than the Indemnity Act. Early in March-April 1919, riots took place in the Punjab and other parts of India. To quell them, martial law was declared at those places and the assistance of the military was invoked to restore order. To examine into the working of the martial law, a Committee, known as the Hunter Committee, commenced its sittings from the beginning of November 1919. But before the Committee could sit and report, the Government of India thought it advisable to pass the Indemnity Act. It is claimed on behalf of the supporters of the Act that the military who had been called to meet an urgent situation promptly must be immediately protected. The opposers of the Act contend that the passing of the Act is premature. The provisions of the Act are few and simple. Section 2 provides that no suit or legal proceeding whatsoever, whether civil or criminal, shall lie in any Court of law, against any officer of Government or against any other person acting under the orders of such officers, or in respect of any Act done or ordered to be done for the purpose of maintaining or restoring order in any part of British India where martial law was enforced between 30th March 1919 and the 26th August 1919, provided that such officer has acted in good faith and in a reasonable belief that his action was necessary for the said purposes. A certificate from a Secretary to Government that any Act was done under the orders of an officer of Government shall be conclusive proof thereof; and all action taken thereunder shall be deemed to have been taken in good faith unless the contrary is proved (s. 3). Every person confined under, and by virtue of, any sentence passed by a Court or authority constituted or appointed under martial law and acting in a judicial capacity shall be deemed to have been lawfully confined (s. 4). Where, under martial law, the property of any person has been taken or used by an officer of Government, the Governor-General in Council shall pay to such person reasonable compensation for any loss immediately attributable to such taking or using (s. 5).

Imperial Legislative Council.

The first meeting of the Imperial Legislative Council during the year took place on February 6. Following the usual practice, His Excellency the Viceroy delivered a lengthy speech reviewing generally the position of affairs. At the outset, he referred to the fact that the existence in India of definitely **Revolutionary Organisations** was an undoubted fact and said that among the legislative matters to be brought forward in that session, were two bills of the highest importance. One of these was a Bill to give effect to the recommendations of the **Rowlatt Commission**. "These recommendations", he said, "were unanimous and, coming as they did from persons who command the greatest authority, the Government of India decided that they should be brought before this Council in the shape of the necessary legislative measures. The very important powers which have enabled the public peace and order of India to be preserved during the war will shortly come to an end. It is essential in my judgment that they should be replaced by adequate substitutes." Referring to the appointment of a Joint Commission of officials and non-officials to suggest improvements in jail administration and the proposal to reform the **Arms Act**, His Excellency went on to discuss the Compulsory Education Bills, which were then in process of becoming law. In this connection he declared that the institutions for the training of vernacular teachers would have to be multiplied, enlarged and strengthened. His Excellency then adverted to the report of the **Indian Industrial Commission** which had been received since the previous meeting of the Council. "I regard", he said, "this report, as a state document of the greatest value and importance. With the underlying principles which form the basis of the Commission's recommendations, namely, the urgent necessity not only for the improvement of Indian industries but for the more active participation of Government in developing them, I imagine that there will be unanimity of opinion. It is essential that the Indian industries should be guided on the right lines at the early stages of their development. Few people, I imagine, would hesitate to agree that in order to ensure such guidance great expansion of scientific and technical advice at the disposal of industry in this country is essential, and the proposals of the Commission for the organisation of scientific and technical service forms probably the most important part of the Report." His Excellency concluded his remarks on the subject of the Industrial Commission's report with an expression of his appreciation of the arduous and successful work of Sir Thomas Holland and his coadjutors. After reference to the successful publicity work of the Government during the concluding stages of the war and the subsequent few months, and to the influenza epidemic and the needs of improving sanitation and the medical service in India, His Excellency referred at length to the changes which would be brought about when the **Reform Scheme** was applied to India. In particular, he dealt with the position which the existing Public Services in India would hold under a popular government. In this regard he said that the help of all the servi-

ces, trained, efficient and impartial, with their high standard of duty, in the public interest, is absolutely essential for great experiments of responsible government to succeed.

Sir William Vincent introduced the **Criminal Law (Emergency Powers) Bill**. In doing so he dwelt on the fact that Government, before the war, lacked effective measures for dealing with the growing revolutionary movements in the country. The aim of these movements was by dacoity, murder and other crimes of violence to promote a rising against the British Government and to render administration of the country impossible. The normal law was inadequate to cope with the movement. During the war, however, the Defence of India Act was passed which enabled the number of outrages to be reduced considerably. Sir William emphasised that the Bill was not in any sense aimed at political movements properly so called. It was definitely and distinctly intended and framed to cope with seditious crime. Even movements which might endanger or tend to endanger public safety could not be suppressed under the Bill unless they were plainly seditious activities. The Bill, he said, was divided into five parts. The first part enabled certain scheduled offences to be tried by a strong court, consisting of three High Court Judges, expeditiously without commitments and with no right of appeal. Part II provides Government with powers for taking preventive measures against seditious crime. Part III enables the Local Government, where there is reasonable ground for believing a person to have been concerned in a scheduled offence, to direct his arrest and confinement in such place and in such conditions as may be prescribed. Part IV applies the provisions of Part III automatically to persons known to have been concerned in revolutionary crime at present and who are under restriction under the Defence of India Act. In conclusion, Sir William Vincent emphasised that the Bill which was sought to be introduced was not aimed at patriots. It was aimed at criminals merely, its main object being the purification of politics from crime. He then introduced the Bill and moved that it be referred to a Select Committee. Mr. V. J. Patel moved that the consideration of the Bill be deferred till six months had elapsed after the expiry of the term of office of this Legislative Council. In doing so he declared that the whole country from one end to the other was entirely opposed to the measure. Mr. Surrendranath Bauerjea, Mr. Kamini Kumar Chandra, Mr. M. A. Jinnah, Pandit Madan Mohan Malaviya and Mr. K. V. Rangaswamy Iyengar all made speeches opposing the introduction of the Bill and supported Mr. Patel's motion. On the following day further opposition to the Bill was offered by Rao Bahadur B. D. Shukul, Dr. Tej Bahadur Sapru, Mr. G. S. Khaparde, Sir Gangadhar Chitnavis, the Raja of Mahmudabad, Sir Fazulbhoj Currimbhoj and a number of others. Sir Verney Lovett and Sir George Lowndes made speeches reiterating the conditions which made the Bill imperative and eventually a division was taken. Sir William's motion that the Bill be referred to a Select Committee was passed by 36 to 21.

Sir Sankaran Nair brought forward a Bill to enable local authorities to grant **pensions and gratuity** to employees or their families where the employee is incapacitated or lost his life in the service of the State. He also said that it was proposed to make the measure applicable in case of injury, disease or death which had occurred since 4th August 1914. The Bill was then formally introduced.

The Finance Member introduced the **Excess Profits Tax** Bill. In doing so, he estimated that the charge on India would be £ 30 millions and in the following year £ 8½ millions would be wanted. "We were now faced," he said, "with a possible deficit of £ 4 millions and additional taxation was inevitable. Large grants of money would be wanted for railways: Government would be left with only 3 millions to meet the 8½ millions required." The super-tax and the excess profits tax would not both be levied. The Government would take whichever was greater. He hoped to obtain some £ 7½ millions from the Excess Profits Tax. Government had carefully considered many suggestions for a new loan, but found themselves unable to accede to it. The representatives of the Bombay and Calcutta Chambers of Commerce opposed the Bill. Sir Fazulbhoy Currimbhoy also opposed the Bill speaking at some length. His main contention was that the need for such large sums of money did not now exist and that the new tax would unduly disturb trade and industry. These were the only opponents of the Bill which was turned over to a Select Committee with instructions to report by March 12.

At the meeting on the 26th February, a number of questions were asked relating to the **Military Accounts Department and housing**. The replies from Government revealed the following facts, that the Government of India were prepared to place sums at low rates of interest at the disposal of Local Governments for housing the working-classes: that very few restrictions were now placed on the flotation of new companies; and that the Cotton Committee had not then sent in their report. The report on the working of the Indian Munitions Board was being prepared but could not be published at the moment. The Commander-in-Chief said that the cost of the Munitions Board up to the end of December had been 74 lakhs of rupees. Mr. Patel next introduced a Bill to amend the **Electricity Act** and explained that he wished to introduce the following clause into the Act.—“(b) Before granting a license the Local Government shall consult every local authority concerned and, where such local authority advances any objection to the grant of a license, the Local Government shall take such objection into consideration and if, in its opinion it is insufficient it will record in writing and communicate to such authority its reasons for such opinion provided that such objection is based on rival claim for such a license the Local Government shall give preference to the application of the local authority unless there exist special circumstances which, in its opinion, renders such preference inexpedient.” Sir Claude Hill said that Government had no objection to the Bill being referred to the Local Governments, but he would not express any opinion until the Local Governments had report-

ed. The Bill was then introduced. Mr. Patel asked permission to introduce a Bill to amend the **Negotiable Instruments Act, 1881**. Mr. Patel explained that his amendment referred to cheques and said that it had been recently ruled by the Bombay High Court that a cheque from which the word "bearer" is struck out and there is no substitution of the word "order" is not negotiable within the meaning of the Act, and that the custom of trade which exists in the Bombay market whereby a cheque with the word "bearer" struck out, without the word "order" inserted, is regarded as an order cheque and of a negotiable nature, cannot legally be recognised. The proposed bill was intended to bring the provisions of the Negotiable Instruments Act, 1881, into line with the hitherto existing practice in India. Sir Thomas Holland said that the Government recognised the usefulness of Mr. Patel's suggestions and they readily accepted the Bill.

The Council assembled on March 1. Sir James Meston introduced the **Financial Statement** which will be found dealt with in detail under the heading "Finance" (*q.v.*) and said that the Budget showed a deficit of £4½ millions sterling instead of £ 2½ millions as estimated by Sir William Meyer. This was due to the additional military expenditure accepted last September. Scarcity had cost nearly 1½ million. The military expenditure in the forthcoming year was reckoned at 41 millions; 6½ millions were allotted for railway renewals and 17½ millions for railway capital expenditure, this being a record programme. Ten millions were asked for as a Victory Loan. To enable this allotment, the Excess Profits Tax was expected to give 6 millions and the following year's surplus was likely to be £ 900,000. In concluding his speech the Finance Member referred to the currency position. "We must", he said, "get our currency habits back on a sounder basis. It is a startling fact that between April, 1915 and the present time, nearly 120 crores of rupees have been added to the circulation. To provide India with this amount, it has been necessary, besides using up the world's current production of silver, to deplete its accumulated stocks. Without the assistance of the Government of the United States we should not have been able to satisfy the appetite of India for metallic currency. To anyone who gives the subject a moment's thought, two conclusions are inevitable. In the first place, the huge sums of money which it has been necessary for India to pay for the purchases of silver bring home to us the wasteful and extravagant nature of what we have been doing. In the second place, a continuance of demand for metallic currency on this scale must react violently on our whole currency and exchange policy. Should the present rates of absorption continue to the end of the year, more than a hundred crores of India's money will have been squandered within three short years. Had it been invested, the interest would have strengthened our revenues and could have been spent to India's benefit."

Sir William Vincent next presented the report of the Select Committee on the **Criminal Law (Emergency Powers) Bill**. A note of dissent was signed by Messrs. Banerjee, Shastri and Shaif and another by the Nawab Sahib Ali Chowdhuri. Three members of the Committee, namely,

Pandit Madan Mohan Malaviya, Mr. Khaparde and Mr. Patel did not sign the report at all. The Finance member then introduced a Bill providing for the continuance of the Ordinance of 7th December 1918 giving power to increase the maximum limit of the issue of **currency notes** against British Treasury Bills by 14 crores to 80 crores of rupees. He also introduced a Bill for retaining the petrol tax of 6 annas a gallon, and another Bill to allow all those whose incomes were under Rs. 2,000 per annum to be free from income-tax. In the general discussion of the financial statement at the meeting on March 7, Sir Fazulbhoj Currimbhoy welcomed the Railway Programme but alluded to the importance of Irrigation and again emphasised that the excess profits tax would bear heavily on certain industries. Mr. Khaparde suggested that the expenditure on railways be cut down by half and the balance given to sanitation and education. Other speakers also expressed the opinion that greater provision should have been made for education and that the amount to be spent on railways was excessive. Mr. Banerjee congratulated the Government on the reduction of the income tax, but spoke strongly on the subject of military charges in India, urging that more pay be given to Indian troops.

The general discussion on the Budget being concluded, a number of resolutions on specific points were brought forward. Mr. Sarma moved that the Budget allotment providing for a £10 million loan be reduced to 4 millions sterling. He held out poor hopes of the ordinary public supporting a 10 million sterling loan with any enthusiasm. The Finance Member explained that Government were about to bring wealth to India in the shape of railway rolling-stock and if Mr. Sarma's motion were accepted, the country would be unable to pay its lawful debts. He opposed the motion, which was lost. Mr. Sarma next moved that an extra 50 lakhs be allotted to the equipment and improvement of the Health Department and 50 lakhs be added for improving the water supply to rural areas. After some discussion, the Finance Member said that he had to oppose the resolution on technical grounds. If a Member desired increased expenditure, he must show where the money could come from. The matters dealt with in the resolution were within the province of Provincial Governments, but he would be glad to consult with Sir Sankaran Nair with a view to a central investigation into sanitation and the causes of the recent influenza and other epidemics. Upon this explanation, Mr. Sarma withdrew his resolution. Mr. Sarma next moved that 150 more lakhs be given to the extension and improvement of **primary education**. The Finance Member declared that if fit and proper teachers could be obtained at once, he would give the money down. As it was impossible to obtain teachers, the provision for education demanded would be useless. He therefore opposed the resolution, which was put to the meeting and lost. Mr. Chanda moved a resolution that the grant to Assam be increased by a non-recurring grant of 11 lakhs and a recurring grant of 1 lakh for the Morarchand College at Sylhet. On the Finance Member explaining that the charges proposed must fall on the provincial revenues, Mr. Chanda withdrew his resolution. Mr. Sarma then moved a resolution

that 50 lakhs be added to the scientific and miscellaneous departments for carrying out the recommendations of the Industrial Commission. Sir Thomas Holland said that he thought it unwise at the moment to make this particular grant and that local governments must be consulted before large sums could be spent in the direction indicated. He gave much information on the subject of forest research and coal and hydro-electric power, and said that Government had not been idle in dealing with the recommendations of the Commission. Mr. Sarma pressed the motion to a division and it was lost.

Sir Claude Hill opened the third stage of the **Budget** discussion with a speech dealing with the heads "Revenue" and "Public Works Department". He said that although the failure of the monsoon had been widespread, the number of relief works was undoubtedly small when compared with the year 1909. Agricultural schools were being started in several provinces, but development in agriculture was being severely handicapped by the shortage of research officers. He hoped that an inquiry committee would be appointed during the ensuing year. With regard to forestry, the United Provinces and the Punjab had made great strides in the production of revenue, while the Forestry Board at Dehra Dun would shortly consider methods for improving the lac industry, which is worth £ 1½ millions. With regard to irrigation, he mentioned that the productive system had produced 345 lakhs of rupees that year and he hoped for an increase of 16 lakhs in the forthcoming year. He mentioned the appointment of Messrs. Barlow and Mears to examine and make a preliminary survey of the potentialities of India in utilising water-power for the development of industries and said that he hoped for a preliminary report in the following June. He concluded with a reference to the necessity for restricting exports from India. Rai Bahadur B. D. Shukul then moved that "This Council recommends to the Governor-General in Council that the provision for expenditure in agriculture be increased by Rs. 50 lakhs to provide for the extension and improvement of agricultural education." After discussion the resolution was by the leave of the Council withdrawn.

In continuing the third stage of the discussion on the Financial Statement at the sitting on March 10, Sir C. Sankaran Nair pointed out that under the revised Budget estimate for the current year the expenditure on education was nearly 731 lakhs. He gave the figures by which the education grants had been increased during the past two years and said that in five of the major provinces measures permitting adoption of **compulsory education** had either been passed or were on their way to being passed. The Government of Bombay had guaranteed one half of the cost of providing compulsory primary education incurred by the Municipality for this purpose in any given year, and in certain cases even a larger amount might be given. He also gave various figures, regarding sanitary improvements and hoped that much would be done in the matter of sanitary research work during the next year. Rao Bahadur B. N. Sarma moved that the **Railway Budget** programme be reduced by £ 500,000 sterling. The gist of his complaint against the proposed expenditure was that the money was not to be spent on increasing

the total mileage of railways but was solely and wholly to be used to develop opened lines, to add to the existing rolling-stock and to make other improvements. He tried to show that for such additional expenditure there was no justification. Mr. M. N. Hogg in opposing the resolution detailed the tremendous difficulties under which the railways had worked and how necessary the proposed grant was. The proposed sum, far from being excessive, was really inadequate and expenditure would have to be maintained on the present programme level for several years to come. Amongst others who opposed the resolution was Sir Thomas Holland who pointed out that the increase of wagon capacity would only be about 6 to 7 per cent; on the other hand the ton-mileage, that is the amount of goods carried per mile, had increased from 15 thousand millions in 1915 to 21 thousand millions in 1918: that is an increase of 40 per cent. The motion was put and negatived.

Mr. Kamini Kumar Chandra then moved the following resolution. "That this Council recommends to the Governor-General in Council that the surplus of the budget estimate for 1919-1920 be reduced by Rs. 10,000 in order to provide for the appointment of a Committee to inquire into the administration of Delhi Province." He declared that in Delhi an entirely bureaucratic Government had sprung up in a short time in proximity to the Imperial Government and that the Province of Delhi did not enjoy the benefits which people in other Provinces enjoyed. The Province was denied direct representation in the Imperial Legislative Council. The speaker complained that official high-handedness interfered with personal liberty, right of public speech and public action. The Home Member, after replying in detail to Mr. Chanda's allegations, submitted that no case has been made out for an elaborate inquiry into matters of the kind touched upon by Mr. Chanda. The resolution was, by leave of the Council, withdrawn.

Rao Bahadur B. N. Sarma next moved that "This Council recommends to the Governor-General-in-Council that the expenditure under Miscellaneous 32 be increased by (a) Rs. 10,000 to meet the cost of a Committee to recommend the measures needed for organising and developing the banking system of the country; and (b) by Rs. 30,000 towards the cost of a committee to inquire into and report upon the civil expenditure of the country during the last five years and recommend measures for the retrenchment of the annual expenditure." In moving this Resolution Mr. Sarma stated his belief that there was enough capital in this country if only people would use it to run their industries without much extraneous help. If there was to be any industrial advance, however, the habits of the people would have to change considerably. He quoted statistics to show that from £ 200 millions to £ 300 millions worth of gold had been imported into this country and about Rs. 400 crores worth of silver for coinage, etc., whereas in England there was not so much gold or silver as there was in India, although the fluid resources were incomparably superior. Mr. Howard said Government fully recognised the importance of banking development. So far as industrial banking was concerned, it was certain that there must be an inquiry. With regard to Mr. Sarma's

second suggestion, he thought the time inopportune, especially considering that the country was on the eve of great reforms. The resolution was put to the Council in two parts, both parts being lost. It was then put as a whole resolution to the Council which rejected it by 31 votes to 9.

At the sitting on March 12 His Excellency the Commander-in-Chief moved for leave to introduce a Bill to extend the operations of the **Indian Defence Force Act, 1917**, for six months so as to make it operative for 12 months after the war. He said that it was intended to make the training as easy as possible and gave details of the reduction in the hours of training proposed. The attendance in camps, he said, would be optional. The Finance Member next moved that three bills be considered and passed. The first was the Bill to amend the **Indian Paper Currency Act, 1917**. The second was the Bill to retain the **Tax on Petrol of 6 annas per gallon** and the third was the **Income Tax Amendment Bill** to relieve taxation under Rs. 2,000. All these Bills were passed without any comment.

The Council then proceeded to deal with the **Criminal Law (Emergency Powers) Bill**. In connection with this there were no less than 185 amendments on the agenda paper. The Home Member moved that the report of the Select Committee on the Bill be taken into consideration. He said that considerable amendments had been made in the Bill and he would gladly have made more had it been possible. This measure was very important and Government would have been glad if all members had been able to support it. He repudiated the notion that there had been any compact of any kind between Government and individual members of the Council. Government were sincerely convinced that the Bill was necessary and there was no idea of its delaying the Reform Scheme. The Bill was designed purely to safeguard the interests of India from criminal movements which, though affecting a very small proportion of the population, had done much to discredit the loyalty of the great body of the citizens in the past. The Bill could only come into operations in special circumstances and special areas, and could only be employed against criminals who were a menace to the whole State. He concluded "If there are members in this Council who accept the necessity for this measure and accept the facts that I have stated, if they are satisfied that Government has really gone as far as is possible to meet them in modifying the provisions of the Bill, I ask them in all earnestness to pause before they oppose a measure which is framed in our judgment in the best interests of this great country whose welfare we all have at heart." Mr. Surendranath Banerjea then moved the following amendment:—"That the Select Committee's Report, together with the Bill and connected papers, be referred to Local Governments, High Courts and public bodies for criticism." He declared that public opinion still desired Government to pause and consider this Bill further and he earnestly pleaded for more time. He said he was sure there would be a political agitation of the most serious kind if the Bill were passed and cited the example of the agitation which followed upon the partition of Bengal. Khan Bahadur Mian Mahomed Shaif

supported Mr. Banerjea's amendment and Mr. Kamini Kumar Chandra and Mr. G. S. Kharparde pointed out that amendments in their names were to the same effect as that which Mr. Banerjea had moved and expressed the desire that they should be considered together. A number of other speakers strongly supported Mr. Banerjea. Mr. Fagan said that at first sight more consideration might appear reasonable, but he did not think that any speaker had paid sufficient attention to the enormous importance of the advice of the Rowlatt Commission "What," he asked, "was to be gained by further discussion." He opposed the motion for delay. After the Home Member had spoken at length emphasising the urgent need for the measure, the amendment was put to the Council and was defeated by 36 votes to 25.

Thereafter the Finance Member laid the report of the Select Committee on the **Excess Profits Tax** before the Council. The members then started to move amendments to the various clauses of the **Rowlatt Bills**. The chief amendment moved on this day was that by Mr. V. J. Patel, who moved "that to the motion for taking the report of the Select Committee into consideration the following words be added this day 1921." The Home Member pointed out that the effect of the amendment would be to postpone all consideration of the Bill for two years. The motion was put to the Council and was lost by 37 votes to 10. Mr. G. S. Kharparde then moved his amendment "that the Bill be not taken into consideration until the Governor-General in Council receives from Parliament an express authority by an Act of Parliament to pass it." This amendment was also lost. On the following day His Excellency the Viceroy explained to the Council the procedure he intended to adopt with regard to the Bill. The Bill, he said, would be considered clause by clause and when the amendments, if any, in respect of the clauses, had been disposed of, the question would be put that that clause or that clause as amended, as the case might be, stood part of the Bill. Kamini Kumar Chandra moved the following amendment that after sub-clause (2) of clause 1 the following sub-clause be inserted: "(2a) This act shall not come into force till six months will have elapsed after the formation of new Legislative Councils in accordance with the Reform Scheme; provided, however, that if anarchical and revolutionary crimes become prevalent in any part of British India before that, the Governor-General may, with the consent of the Legislative Council make a declaration to that effect in the *Gazette of India* and introduce any provisions of this Act or, if necessary, the whole Act in such part." The Home Member pointed out that this amendment would postpone the operation of the Bill indefinitely, since they did not know when the Reforms would come into operation. The motion was put and negatived. Three members then proposed that "one year" be substituted for the "three years" as the period for which the Bill should be in force but the Home Member again opposed and clause 1 of the Bill was passed. With regard to clause 2, Rao Bahadur B. N. Sarma moved that the following definition be inserted: "Revolutionary movement means a movement directed to the overthrow by force of

His Majesty's established Government in India." After a lengthy discussion Mr. Sarma's amendment was thrown out and clause 2 of the Bill as amended by the Select Committee was passed.

Mr. V. J. Patel then moved that the whole of Part I of the Bill be deleted. The object of this part, he said, was to secure speedy trial of certain offences and said that the procedure proposed in Part I defeated the object aimed at. Other speakers supporting Mr. Patel's motion touched a large number of technical points. The motion was put and negatived. Clause 3 of the Bill was then considered Mr. C. S. Kharparde moved that for the words "In Council" the words "in Legislative Council" be substituted. Rao Bahadur B. N. Sarma also moved the following provisions: "Provided that no action shall be taken by the Governor-General in Council without giving the Indian Legislative Council, or the Legislative Council of the Province in respect of which such a notification is proposed to be made, an opportunity of expressing its opinion by a resolution passed on the subject; provided, further, that such notification shall at any time after the expiry of one year from the date thereof be withdrawn on the recommendation of the Indian Legislative Council or the Legislative Council of the province in respect of which it may have been made by a resolution passed by three-fifths of the members of either of the said Councils." The Home Member opposed both the amendments pointing out that the effect of each was to enable the Legislature to interfere with the Executive. All the amendments were thrown out and clause 3 was passed. Clause 4 was then considered. Seven amendments to this clause were moved. Of these Mr. V. J. Patel moved that section 2 of Clause 4 should read as follows: No order under sub-section (1) shall be made in respect of or be deemed to include, any person whose case is under inquiry before a Magistrate or who has been committed under the Code for trial before a high Court or a Court of Session etc."

Mr. Kamini Kumar Chanda moved that to Sub-clause 4 of the clause the following be added: "Calling upon him to show cause within such time as may be fixed by the Chief Justice why the trial should not be held in accordance with this part. The Chief Justice may, if he thinks proper, extend such time on the application of the accused." The effect of this amendment, he contended, would be to give the accused an opportunity of being fully heard before a final order should be passed against him. The Home Member pointed out that the amendment would defeat the great object of the Bill, which was to secure expeditious trial. The same member also moved that a new sub-clause be inserted in the following terms: "The Chief Justice may direct that the accused, if in custody or under arrest, be produced before him and, when he is produced before him, or without directing that he be produced, order that he be admitted to bail". These three amendments and the other four were all put to the meeting and all were negatived and clause 4 was passed. Amongst the amendments moved to Clause 5 was one by Rao Bahadur B. N. Sarma the effect of which was that in the constitution of the special courts only permanent judges should be nominated. The amendment was put and negatived and clause 5 was passed.

In the discussion of Clause 6, a number of amendments were introduced the effect of which was that it should be necessary for the Advocate General to state his reasons for having given a certificate that, in his opinion, it would be necessary in the interests of justice that the whole, or a part, of the trial should be held at some place other than the usual place of sitting of the High Court. The Law Member pointed out that the clause in the Bill as drafted only provided that the Advocate General could not be compelled to state the grounds of his application in ordinary cases. He would probably be able to state them, and would be most anxious to do so, but he pointed out special cases in which it would be quite impossible for the Advocate General to disclose the grounds for which he was granting a certificate. A motion on the lines of the amendment was put and lost. Clause 6 was then passed. Clause 7 was passed without discussion. Mr. Kamini Kumar Chanda moved the following amendment to Clause 8: "Provided that the accused shall have the right of cross-examining any prosecution witness if he so wishes before the framing of a charge, without prejudice to his right of cross-examination after the framing of the charge". The mover contended that such a preliminary examination as he advocated might demonstrate to the Court that there was really no reason to proceed further in the matter and would hence result in the saving of time and public money. The Home Member pointed out that the proviso was unnecessary, since the practice of the High Court procedure has always been such as the mover suggested should be adopted. The motion was accordingly put and negatived and clause 8 of the Bill was passed.

There were one or two amendments to Clause 9 the effect of which was to compel the Court to adjourn if it should be necessary to enable the accused to get his witnesses produced. The Home Member again pointed out that such amendments were unnecessary, because it was impossible to cite any case in which a judge of a High Court had refused reasonable opportunity for adjournment for the purpose of calling defence witnesses. The amendment was negatived. A further amendment was moved by Mr. Kamini Kumar Chanda as follows: "The accused shall be entitled to get copies of **depositions and exhibits** free of cost to prepare defences". The Home Member refused to admit any reason why an accused, while on trial before a special tribunal of three High Court judges should be more favoured in the way of obtaining copies free of cost than any ordinary person. The provisions of the Code in this respect were not illiberal. The motion was negatived. Mr. Chanda further moved "that after clause 9 the following clause be inserted: (9a) If there is any record of any previous statement or evidence or substance thereof with any authority including the police the accused shall be entitled to have copies of such evidence, statement or substance after applying for the same." The Home Member pointed out that such an amendment was unnecessary, as provision for the supply of such statements as Mr. Chanda indicated already existed. The motion was negatived and clause 9 of the Bill was put and agreed to. Clause 10 passed without discussion. An amendment was moved to Clause 11 by Mr.

Chanda, the effect of which was that, if it was thought necessary to keep any portion of the proceedings of the Court from the public, the opinion of the High Court in this connection should be unanimous. The Home Member saw no reason why, if the Court should decide to hold proceedings *in camera*, the opinion of the majority on the point should not prevail. The motion was negatived. Clause 11 was passed. Mr. Surrendranath Banerjea then moved that Clause 12 be deleted. The contention of all those who spoke in favour of the amendment was that the cross-examination of the accused in the witness-box might tend to prejudice his case, because it had been found that many innocent persons spoil their case, inasmuch as, though they told the truth, they told it in such a way as to strengthen the case against them. The motion was put and was lost by 37 votes to 14. Mr. Kamini Kumar Chanda moved the following amendment: "that for sub-clause 3 to Clause 12 the following sub-clause be substituted: (3) No inference adverse to the accused shall be drawn from his failure to give evidence on oath." As there were several amendments to the same effect, the motion that the principle of the amendment be accepted was put and agreed to. The motion by Rao Bahadur B. N. Sarma to the effect that an accused person when he is in the witness-box should not be asked certain questions, including whether he had a bad character, was negatived after an explanation by the Law Member that there was no object in it. Clause 12 of the Bill as further amended was then passed. Clause 13 passed without discussion.

With regard to Clause 14, Rai Bahadur B. D. Shukul moved the following amendment "that for clause 14 the following clause be substituted: 'The accused shall be acquitted unless all the judges constituting the Court concur in convicting him.'" The motion was put and lost by 35 votes to 15. Mr. V. J. Patel moved that clause 14 should be so amended as to read "In the event of any difference of opinion between the members of the court, the opinion of the majority shall prevail; but in no case of difference of opinion shall a sentence of death be passed." The Home Member said that he was prepared to accept the following amendment "Provided that a sentence of death shall not be passed in any case in which there is a difference of opinion among the members of the Court as to the guilt of the accused," the difference between this amendment and that of Mr. Patel being that the former was to go in under clause 16 instead of clause 14. Clause 14 was then passed. Mr. Patel then moved the following amendment to Clause 15: "Provided that the Court shall not convict the accused of any offence referred to in Clause (2) of the Schedule or of any attempt or conspiracy to commit any such offence or of any abetment of any such offence unless it is proved to its satisfaction that such offence, attempt, conspiracy or abetment is connected with a particular movement endangering the safety of the State." The amendment was defeated by 35 to 15. After discussion Sir James DuBoulay moved that for Clause 15 of the Bill the following be substituted: "At any trial under this Part, the accused may be charged with and convicted of any offence against any provision of the law which is referred to in the Schedule." This amendment was

accepted and Clause 15 passed. Clause 16, with the addition of the proviso already mentioned, was put to the meeting and passed. Among the amendments moved to clause 17 was one by Rao Bahadur B. N. Sarma to the following effect, that to Clause 17 the following be added: "Provided that, where the decision of the Court is that of a majority of the Judges presiding at the trial, an appeal shall lie to a full Bench consisting of not less than five Judges of the High Court, and where the High Court consists of a smaller number of Judges than five, the appeal shall be transferred to a High Court consisting of five or more judges." The Home Member drew attention to the conditions under which this part of the Act would come into operation which made it expedient to provide for a speedy and final trial of offences. The motion was accordingly negatived and clause 17 passed. Several motions proposing the deletion of one or more sub-clauses of clause 18 were defeated; while an amendment to clause 19 providing that in sub clause 2 of clause 19 for the words "Custody of the accused" the words "and his release on bail" be added was accepted. Clause 18 and Clause 19 as amended were passed.

At the session on March 14, **Part II** was considered. Mr. Patel moved that **Part II** be deleted. In his speech, Mr. Patel said that he and others might reconcile themselves to the provisions of Part I, however drastic they might be; but so far as the provisions of Part II and subsequent parts were concerned, he for one had never been able to reconcile himself to them; nor, did he venture to think, could any Indian who loved his country. The provisions of Part II were, he maintained, wrong in principle, unsound in conception, dangerous in operation and too sweeping and too comprehensive. Among those who supported Mr. Patel were Mr. Kamini Kumar Chanda and Rao Bahadur B. N. Sarma. Sir James DuBoulay pointed out that the Bill was divided into two main divisions embodying two great principles; the one was **punitive** and the other **preventive** and that the former would be ineffectual unless the latter were also accepted. The motion was defeated by 35 votes to 21. Part II was then considered clause by clause. Mr. Patel moved an amendment to clause 20 to the effect that "If the Governor-General in Council is satisfied that anarchical or revolutionary movements which are, in his opinion, likely to lead to the commission of offences against the State, are being extensively promoted in the whole or any part of British India, etc." This amendment limited the offences to 10 or 11, the number prescribed in the Indian Penal Code, those under scheduled offences as mentioned in Clause 20 being more numerous. This amendment as slightly amended by Mr. Kamini Kumar Chanda was put and negatived and clause 20 was passed. An amendment to clause 21 moved by Mr. Kamini Kumar Chanda had as its object, according to Mr. Chanda, the destruction of the machinery by which Government proposed to arm the executive with powers of a judicial officer to punish a man and then call upon an investigating authority to inquire into the matter. At this stage Rao Bahadur B. N. Sarma asked whether there was any chance of Government accepting the principles upon which a number of amendments were passed. The Home Member, in reply,

stated that he was prepared to accept an amendment on the lines of the one proposed by Mr. Shastri which was on the agenda paper. Mr. Chanda's amendment was then put and negatived and Mr. Shastri then formally moved the amendment referred to by the Home Member which was as follows: "That in clause 21 (1) for the words by order in writing containing a declaration to that effect" the following be substituted "Shall place all the materials in its possession relating to his case before a judicial officer not below the rank of a District and Sessions Judge and take his opinion thereon. After considering such opinion, the Local Government, if it is satisfied that such action is necessary, may, by order in writing containing a declaration to the effect that such person is or has been actively concerned in such area in any movement of the nature referred to in section 20." The Home Member said that he was prepared to accept the amendment in a modified form. A number of non-official members moved further amendments to the clause on the ground that the Home Member's alteration of Mr. Chanda's amendment had changed it. All however were negatived and clause 21 was passed. Clause 22 passed without discussion: Clauses 23 and 24 were also passed. There were several amendments to Clause 25. One of them moved by Mr. Kamini Kumar Chanda was as follows: "That in clause 25 (2) the words "in camera" and the words "at some stage of the proceedings" be deleted and that the words "personally or by pleader" be inserted after the words before it. Mr. Chanda contended that an accused person in the circumstances contemplated by the Bill should be permitted to have the assistance of a pleader. An amendment proposed by Mr. Patel read as follows: "That in clause 25, Section 2, for the words "in camera" the following words be substituted: "which may be *in camera* if such authority for reasons to be recorded in writing so decides." Mr. Chanda withdrew his amendment and accepted this in its place. This amendment was accordingly put to the meeting and was lost by 33 votes to 17. Mr. Patel moved as follows: "In Clause 25 (3) for the words "shall not be bound to observe" the words "shall be as far as possible" be substituted. The clause would then read as follows: "Subject to the provisions of sub-section (2) the inquiry shall be conducted in such manner as the investigating authority considers best suited to elicit the facts of the case and in making the inquiry such authority shall, as far as possible, follow the rules of the law of evidence." In a speech by Mr. C. A. Kincaid he mentioned the fact that several European countries did not observe in their courts the commonly understood laws of evidence but admitted what is known as "hearsay" evidence. Mr. Patel's amendment was put to the meeting and lost by 34 votes to 16. Several other amendments by other speakers to clause 25 were negatived and clause 25 was passed. To Clause 26 Mr. G. S. Khaparde moved the following amendment: "That in proviso (a) of Clause 26, Section 1, after words "that authority" the words "its reasons therefor" be inserted." This amendment, he said, made it necessary for the investigating authority not only to give their conclusions but also to set forth their reasons for their conclusions. The Home Member pointed out that it would involve the exposure

of persons who had given information to Government to the danger of immediate assassination. The amendment was withdrawn. The amendment to clause 26, Section 2, by Rao Bahadur Sarma which made the clause read "No order made under sub-section (1) shall continue in force for more than one year from the date of the order made under section (2)" was accepted and passed. Clause 26 was then passed. Clauses 27 to 31 were quickly passed as the speeches were all short. The Home Member was equally brief in his reply and **Part II** of the Bill was passed. Mr. V. J. Patel then moved that **Part III** of the Bill be deleted. He said that after three days' hard work he realised that Government were not prepared to yield in any part of the Bill. He simply left the amendment to the good sense of the Council. Pandit Madan Mohan Malaviya said that the real reason of the strong opposition to this Bill was that injustice should be prevented. None of them desired crime to go on unpunished. There was no cause for this executive action and he asked Government to be content with their present powers. Sir James DuBoulay opposed the amendment and pointed out that the more lenient measures that were sufficient when the revolutionary movement was only threatening to result in these scheduled offences were no longer sufficient and it was necessary to take the more drastic measures provided in **Part III** Mr. Patel's amendment was defeated on a division of 36 to 19. Four amendments to clause 32 were lost and the clause was passed. An amendment to clause 33 was then moved by Mr. Patel to the following effect: "That in sub-clause c of clause 33 (1) for the words "prejudicial to public safety" the words "connected with any anarchical or revolutionary movement" be substituted. This amendment was accepted and clause 33 as amended was passed. Clauses 34, 35 and 36 were quickly passed and clause 37, with an amendment moved by Mr. V. J. Patel to the following effect "That in clause 37, after the words 'with fine' the words 'which may extend to one thousand rupees' be inserted" was also passed. Clauses 39, 40, 41 and 42 were passed quickly. The amendments dealing with **Scheduled Offences** were then brought forward. One by Mr. Patel to the following effect: "That for clause (1) of the Schedule the following be substituted 'any offence under the following sections of the Indian Penal Code, namely, Sections 121, 121a 122, 123, 124, 131 and 132'" was accepted. Mr. Patel moved that in Clause 2 (a) of the schedule the figures and letters 124a and 153a be deleted. The inclusion of these figures, he said, would kill all constitutional agitation. The Home Member reassured the Council that suppression of constitutional agitation was far from the mind of the Government. Mr. Patel's amendment was negatived and the motion on the Schedule of the Bill as further amended and as part of the Bill was then put and agreed to. The result of the debate on the Bill was that out of the 185 amendments 19 were accepted in principle or in full and six were accepted partially.

At the meeting on the 18th the Home Member rose to move the Bill to cope with **Anarchical and Revolutionary Crime**. He first drew attention to the alterations in the

Bill which had been carried out after they had been approved by the Council. In the course of his speech, he expressed regret that no support had been given to the Bill. He emphasised that the Government were convinced of the necessity for this legislation, the necessity based on facts established by a thoroughly impartial tribunal. The anarchical movement was far from being killed. It was still very much alive. He made a strong appeal for the co-operation of the members of the Council to crush anarchism, and declared that Government did not, under any circumstance, wish to enforce this bill except in case of necessity. Finally, he said most emphatically that the Bill could not be used against political agitation but only against anarchical and revolutionary crime. Mr. Patel then moved that the Bill be republished and not passed and proceeded to stigmatise the Bill as most unpopular, reiterating many old objections made in the previous debates. In the course of his remarks he said he considered the whole proceedings in connection with the Bill were invalid and illegal. Mr. Banerjea congratulated the Home Member on the conciliatory tone of his speech. He maintained, however, that the measure was unwise and inexpedient and finally implored the Viceroy personally to postpone the measure. Mr. Shastri also delivered a long speech against the Bill. Mr. Hogg in supporting the Bill, said he was satisfied that it was necessary and that no law-abiding citizens would be affected by it. He felt certain that if the Bill were not passed the anarchical party would at once recommence their plots and schemes. The main contention of Pandit Madan Mohan Malaviya's speech was that Government were attaching too much importance to the Rowlatt Commission's recommendations. He pleaded that it was not right for Government to carry the measure against the desire of the representatives of the people. The motion that the Bill be republished was then put and negatived by 35 to 11. At the conclusion of the session, after the Home Member had replied to several arguments advanced in the speech on Mr. Patel's amendment to the Bill, the **Bill** was passed by 35 votes to 20.

At the session on March 19 the **Termination of the Present War Bill** was passed. His Excellency the Commander-in-Chief then moved that the **Indian Defence Force** Amendment Bill be taken into consideration. Mr. Ironside raised a protest against the scheme on behalf of the commercial community on the ground that the necessity for the measure was no longer felt. The state of efficiency he said, which the Indian Defence Force had attained should suffice to carry on for another year. Several workers in the plains had little time to become soldiers. The Calcutta commercial world was tired out; few men got a trip to the hills; 75 per cent. had joined up in the Army and the rest had carried on business under most difficult circumstances. The Commander-in-Chief said that Government were most sympathetic with Mr. Ironside's remarks and what was now proposed was that all training should be voluntary for men over 41 and they were prepared to order that drills in the hot weather in the plains should be the exception. The Bill was then passed.

Mr. Patel moved that the **Negotiable Instruments Amendment Bill** be taken into consideration and it was passed. The Finance Member next presented the Report of the Select Committee on the **Excess Profits Duty Bill**. He outlined the purpose of the Bill, dealing fully with the details in connection with debts and profits, explaining why certain concessions and alterations had been made in various directions. A Board of referees would deal with all hard cases. Mr. Hogg asked for a definite reassurance from Government that the Bill was meant for one year only and could not be re-enacted without new legislation. Certain banks, insurance companies and others, he said, held large amounts in Government securities which had now largely depreciated. He welcomed the assurance that this depreciation would be taken into consideration. The Super-Tax had been condemned as unsound and uneconomical as applied to companies and it should be removed and applied to individual cases only. He hoped that the Finance Member would promise to put the super-tax and income-tax on a sounder basis next year. Rai Sitanath Rai proposed that the rate of taxation should be 33 per cent. instead of 50 per cent. as in the Bill, and that the taxable limit of small businesses be raised from Rs. 30,000 to Rs. 50,000. The Finance Member pointed out that Government wanted £ 6 millions and only a 50 per cent. assessment would give them this sum. The motion was put and lost. Mr. Hogg then proposed that a refund should be made to all persons if the tax should exceed the sum of Rs. 11 crores. He withdrew it on an assurance from the Finance Member that the latter would apply the principle of Mr. Hogg's motion later on. Several minor amendments, the effect of which was to make the provisions of the Bill clearer, were accepted and the Bill was passed into law.

The Law Member next introduced a Bill to supplement the **Punjab Courts Act, 1918**. He said that the Chief Court in the Province would shortly be replaced by a High Court. The rules of business were suspended and the Bill considered and passed.

The Finance Member presented the Budget in its final form and said that the estimated surplus had been £ 669,000 as against £ 868,000 taken in the financial statement. Provision had been made for a larger outlay to Bombay and the Central Provinces for famine relief. The receipts from Treasury Bills had been very satisfactory in the last three weeks. Provision had been made for reserving £ 33,000 to form the nucleus of a new public health fund.

His Excellency the Viceroy in bringing the March session to a close delivered a speech in which he repudiated the idea that the Rowlatt Bill was a slur on India's good name and repeated that it only affected the smallest fraction of the population. He hoped that its mere existence on the statute book would prove sufficient. Government felt deep regret in being at variance with the views of the non-official Indian members of Council. The Viceroy then asked the members of Council to obliterate the recent disagreement on domestic matters. He then referred to India's whole-hearted response last year to the Empire's

appeal. India now stood on the threshold of a new dispensation and there would be difficulties and disagreements such as were inherent in all processes of political development. He hoped that the spirit of friendship and co-operation which brought them together in the supreme crisis would continue to exercise a healthy influence over public life and concluded by saying "let us part to-day feeling the truth of "*amatium irae amoris reintegratio.*"

In opening the September session of the Council, the Viceroy dealt with the major events which had occurred in India since the previous meeting of the Council. He said that he had done everything possible in impressing upon the Home Government the views of Moslem fellow-subjects with regard to the **Turkish Peace Terms**. He then referred to the recent grave outbreaks in the **Punjab** and elsewhere and said that the Lieutenant-Governor of the Punjab had been busy reviewing all the sentences and exercising clemency. He announced that a court of inquiry would sit and would consist of Lord Hunter, formerly Solicitor General for Scotland, as Chairman, Mr. Justice Rankin, Mr. W. Rice, General Sir George Barrow, Sir Chimanlal H. Setalvad and Sahibzada Sultan Ahmad Khan. The proceedings of this tribunal would ordinarily be public. An Act, he said, would immediately be passed indemnifying all officers of the Government for the action they had recently taken in restoring order. Alluding to the **Afghan War**, he said he was confident that Afghanistan would realise in time that we had no designs upon her and, if she desired our friendship, overtures must come from her. He defended the work done by medical officers and said that the force on the frontier had been 147,000 men and quoted figures showing hospital admissions. He expressed his warm thanks to the Ruling Princes for their assistance and also his admiration of the splendid work done by Indian units. Indian soldiers for their part in the great war would shortly receive land and money grants. He trusted that the Reform Scheme would shortly emerge from Parliament and said that it would have his loyal support. He hoped that controversy would then cease and all would concentrate their efforts to make it a success. Touching upon the problems of exchange, he declared his sympathy with the commercial community. He realised fully the great handicap of the exchange position to India's foreign trade, but it was impossible to coin rupees, the bullion value of which was greater than their face value. He hoped that the **Exchange Committee** would find a solution of the problem. India, however, was somewhat at the mercy of conditions beyond her control. Turning to the question of **labour in India** the Viceroy said that two representatives from India would proceed to Washington to be present at the International Labour Conference, while Local Governments were being asked for their opinion on the amendments in the law for reducing the hours of labour. The Government of India was strongly protesting against the recent **South African Legislation** as unjustified and begged the people meanwhile to exercise calmness and moderation in the matter, especially as Sir Benjamin Robertson would go

with a deputation to South Africa in India's interests. Government were pressing for the immediate cancellation of the Fiji indentures, but the Bishop of Polynesia, with a non-official mission, was coming to India to try and get India to agree to the resumption of free emigration and he hoped that he would get a patient hearing. Finally, the Viceroy said that he hoped to lay deep and sure the foundations of the new **Industrial development**. Sir Thomas Holland was discussing, he said, the question of the Industrial Commission's Report with the Secretary of State. He hoped to press the subject forward at a good pace and soon see India self-supporting industrially in many directions. Alluding to the Calcutta University Commission's Report, the Viceroy said that the **Dacca University Bill** would be introduced forthwith and that further educational matters would receive close attention in special relation to the country's industrial needs.

Among the replies to interpellations were the following.—The question of the **housing of the working-classes** was engaging the serious attention of Government and Local Governments would shortly be addressed on the subject. The proposal for a **Central Cotton Committee** was under consideration and a scheme for an **Aerial Mail Service** in India was also being considered. The Privy Council had granted leave to appeal to 21 persons convicted by court martial in Lahore. The convicts sentenced to transportation were for the moment retained in Indian jails. Four Courts Martial in the Punjab had tried 114 and 852 individuals. Five hundred and eighty males and one female were convicted; 271 acquitted; 108 were sentenced to death; 265 to transportation for life and 183 to imprisonment. 28 death sentences had been commuted and heavy reductions made in cases of imprisonment.

Mr. Shafi asked for leave to introduce the **Sea Customs** Amendment Bill, and leave was granted. The **Provident Fund** amendment Bill, **Indian Census** Bill, **Calcutta High Court Jurisdictional Limit** Bill, the **Indian Naturalisation** Amendment Bill and the **Land Acquisition** Amendment Bill were all introduced. A resolution offering congratulations to His Majesty's naval, military and air forces, etc. on the conclusion of a victorious peace was moved by Rao Bhabadur B. N. Sarma. Mr. Sarma in his speech alluded to the gallantry and endurance displayed by all the forces paying especial tribute to the work done by the fighting forces of India. The motion was passed.

Pandit Madan Mohan Malaviya moved a resolution in the following terms: "That this Council recommends to the Governor-General in Council that he should request His Majesty's Government to appoint without further delay a **commission** consisting of gentlemen not connected with the Indian administration to inquire into (a) the causes of the **recent disturbances in the Punjab** and (b) the propriety of the measures taken in dealing with them and to vest such powers with legal authority to annul or modify sentences passed by the Martial Law Commission

or by Magistrates specially empowered to deal summarily with cases alleged to have been connected with such disturbances." In moving this resolution, Pandit Malaviya argued that, had certain officials managed affairs better, these disturbances would never have taken place. Indian members, he said, had strongly objected to the constitution of the Commission as announced by the Viceroy in his opening speech. He made no attack or reflection on any particular officer, but he strongly urged a larger number of Indians being appointed on the Committee on the ground that Indians were more concerned in the matter than Europeans. The Indian community would have far more confidence if a third Indian were to be appointed. He strongly urged that the Commission should have powers to annul or modify the sentences passed by the Martial Law Commission. Replying, Sir Edward Maclagan said that he thought few people in India had really realised the gravity of the situation caused by the recent disturbances in the Punjab. Had it not been for the rapidity with which the riots had been met, the lives and property of many would have been in imminent danger. As it was, there had very nearly been a very serious catastrophe.

Discussion on this resolution was suspended and during the suspension, the **Indian Coinage** Amendment Bill, the **Cantonments** Bill, the **Cinematograph** Amendment Bill, the **Indian Companies Restriction** Repealing Bill, and the **Indian Merchant Shipping Law** Amendment Bill were all passed.

Subsequently, the Member for Commerce and Industry moved for leave to introduce the **Indian Tariff** (Amendment) Bill, the effect of which, he said, was to impose an export duty of 15 per cent. on hides and skins and a rebate of 10 per cent. on hides and skins exported to other ports of the Empire. Its object was to ensure that Indian hides and skins shall be converted into fully tanned leather for articles of leather as far as possible in India and, failing this, in other parts of India, instead of being exported in a raw state for manufacture in foreign countries. The present position in India, he said, was that there were some hundreds of tanneries for the tanning of hides, a large number of which had come into existence in order to satisfy military requirements during the war. We had, in fact, the foundations of a flourishing industry, but there was reason to fear that it might dwindle and disappear with the termination of military requirements, if some other support were not given. It was proposed to limit by notification the benefit of this rebate to hides and skins actually tanned within the Empire and Indian hides re-exported from an Empire port for the purpose of being tanned abroad would not be entitled to any rebate. After Mr. Crum and Mr. Nigel Paton, Sir Dinshah Wacha and Mr. Sarma had supported the Bill, Pandit Madan Mohan Malaviya said that he did not see the justification for the rebate of 10 per cent. to other parts of the Empire. He advocated that Government should start tanneries and schools and the importation of expert tanners from any country whence they could be obtained. This element of rebate was a dangerous one and he hoped

Government would oppose it. The Bill was then introduced.

The Home Member introduced a Bill further to amend the **Indian Arms Act of 1878**. One of the changes contemplated in the Bill was a curtailment of the number of unlicensed persons and it was probable that a number of persons in lawful possession of arms and ammunitions would be in unlawful possession when a curtailment took place. The present Bill for the safe custody of such arms and ammunitions would give their possessors an opportunity to dispose of their property. Finally, Mr. Shafi introduced a Bill to provide for the establishment and incorporation of a **unitary teaching and residential university** at Dacca. He went fully into the objects and reasons of the university and outlined the provisions made. The march of education in East Bengal had been extraordinary since 1904. Now that the war was over domestic problems could no longer be neglected. He believed that the new university would be heartily welcomed and that it would relieve the burden falling on the Calcutta University. After some criticism on points of detail, the Bill was introduced.

The debate on Pandit Madan Mohan Malaviya's resolution on the appointment of a Commission to inquire into recent **disturbances in the Punjab** was continued. Mr. Kamin Kumar Chanda in supporting the resolution submitted that the best thing would be to add another Indian member to the Committee selected in such a manner as would give satisfaction to the Indian community. Raja Sri Rampal Singh questioned the necessity of declaring the Punjab to be in open rebellion and pressed for the appointment of a greater number of Indians on the Committee. The Home Member replied that he deplored the tendency to minimise the dreadful happenings in the Punjab. He dealt with the remission of sentences. These, he declared, had been reviewed with the greatest care by the Local Governments and, in many cases, by the Government of India. As admitted by many members of the Council, clemency, great clemency, had been shown. He also argued that, since none of those who had spoken to the motion nor the mover himself had anything to say against the personnel of the Committee, there was no reason for changing the whole of the personnel of the Committee; nor as some argued was it a tenable position that the Government of India should divest itself of responsibility in the matter by appointing a Committee which would report direct to His Majesty's Government. Pandit Madan Mohan Malaviya hoped that the Government would consider a suggestion to release on some security or securities personal or pecuniary or both, those men then imprisoned who had not been concerned in arson, murder or pillage, both in order that, pending the result of the inquiry, they should not suffer from unnecessary imprisonment and in order that they should be able to give evidence before the Committee and to see that their cases were properly put before it. The resolution was put to the meeting and negatived.

Mr. Kamini Kumar Chanda next moved the following resolution: "That this council recommends to the Governor-General in Council

the appointment of a mixed committee of officials and non-officials to investigate the causes and nature of the recent outbreak of disorder in Delhi and the circumstances of opening fire on the crowds there. On the Home Member explaining that there would be an inquiry by a committee into these disorders, the resolution was withdrawn. Mr. Chanda then moved that "this council recommends to the Governor-General in Council the appointment of a mixed committee of official and non-official members to investigate into the causes of firing on the crowds in Calcutta in April last." In supporting the resolution Mr. Chanda contended that it was necessary to find out why, if there were riotous assemblies in Calcutta, civil force should not have been resorted to in the first instance. Pandit Madan Mohan Malaviya supported the resolution to the extent that what happened in Calcutta should also be brought within the scope of the Committee or Commission which was to inquire into the events of the Punjab, Delhi and Bombay. The Home Member placed certain reports on the table and declared that in view of these reports there was no real reason either for a separate inquiry or for extending the scope of the inquiry already proposed to the Calcutta disorders. "It is," he said, "obviously desirable to limit the scope of the inquiry as much as possible if the Committee is to finish its work within a reasonable time." The motion was accordingly put and negatived.

At the session on September 15 the Member for Commerce and Industry said Government contemplated a general scheme for an increase in the **pay of postmen** which would absorb the temporary war allowance. He gave figures to show the considerable advances in pay already received by the postmen.

The Commander-in-Chief, replying to various questions, stated that the augmentation of the cadre of the **Indian Medical Service** and applications of temporary Indian officers for permanent commissions were under consideration. Fifty permanent Commissions in the I. M. S. had been granted since the competitive examination ceased, and Indians had received 17 of these.

Mr. Kamini Kumar Chanda then moved the following resolution: "that this Council recommends to the Governor-General-in-Council that Simla should cease to be the summer headquarters of the Punjab Government." He quoted the Government of India to show that it is undesirable for the supreme Government to be at the headquarters of the Provincial Government. Further, the Lieutenant Governor of the Punjab was the only Provincial Governor having a seat on the Imperial Council which gave him opportunities not enjoyed by other rulers. There were, he said, many other reasons for the transfer, but the strongest was that of **accommodation in Simla**. As long ago as 1913 the Government of India recognised that Simla was overcrowded. Since then the number of Government officials had increased enormously and the question of housing became acute. Sir Umar Hayat Khan said that the Government of India had really encroached upon the Punjab, for the Punjab Government were in their own province and lived in a corner

of Simla. He suggested that the Government of India should make use of one of the neighbouring hills. He opposed the resolution. The Home Member deprecated any transfer, saying that to make Simla an Imperial enclave would be very expensive. The cost of the move might be at least 50 lakhs, which would not include railway communications, which might bring the cost up to 124 lakhs. The motion was put and lost.

Mr. Chanda then moved the following resolution: "This Council recommends to the Governor General in Council that immediate steps be taken for the reduction of the unprecedented **high prices** of necessary articles of food and of cloth which obtained in several provinces either by further controlling all exports or facilitating imports or both and by such other means as may be considered proper." He urged that the situation was dangerous and its acuteness was being felt by both Europeans and Indians. He mentioned a suggestion that Burma rice should be freely imported and Government control removed. He said that it was generally understood that stocks were being held up by merchants in Calcutta. Mr. Mant proceeded to show how, owing to the war, there was a **world shortage** of product on and this was bound to react on India. Widespread failure of the monsoon in the previous year and the restricted cultivation of rice and other crops had had grave effects on the good position. He quoted figures showing how heavily the exports of grain and rice had been curtailed in the present year. There was really a general shortage of rice throughout the East. Government had refused to export rice to Japan and Java but had done their best for Indians across the seas. Government were also indebted to the Wheat Commission for their assistance in getting wheat from Australia at a reasonable rate. He finished by declaring that the crisis had passed as the monsoon had been good and a plentiful *khari* harvest was now assured all over India. Mr. Sarma said the question was how did the Government propose to relieve the position in the near future? The inflation of prices was bound to continue owing to the currency position and he argued that wages in India had not increased in the same proportion as prices. About 50 millions of people in India could now only afford one meal a day. Pandit Madan Mohan Malaviya also contended that there was pressing need for action. He believed that the present scarcity was largely due to facilities which had been afforded for exports to other countries. The food produce in India was not enough for the people in this country nor have the poor in India enough money to buy enough food and he quoted Lord Sinha's saying in London that millions in India were on the border of starvation. The resolution was slightly amended and was put to the meeting and accepted. Rai Saheb Sitanath Rai next moved that a **university** be established in **Nagpur** and the resolution was accepted. Mr. Crum next recommended that the **Calcutta Mint** be removed from its present site. The removal of the Mint would effect a much needed improvement from a trade and health point of view. Government accepted the resolution with a proviso that it would not bind itself to immediate

action and the question must be fully gone into *de novo*.

At the meeting on 17th September the Viceroy, before proceeding to the business of the day, invited the Honorary Members' attention to two tablets, one in bronze and the other in marble, which had been prepared for the purpose of recording in villages the number of recruits furnished for the war. He invited criticism on these tablets. Among the answers to questions one was by Sir A. Anderson who said that the restoration of the train service in India to pre-war conditions would be slow, as engines and rolling stock were obtained from home. The Member for Commerce and Industry said that, subject to certain restrictions, trading with enemy countries was now permissible but that the import or export of certain commodities was subject to control. The **Sea Customs Amendment Bill**, the **Provident Fund Amendment Bill**, the **Calcutta High Court Jurisdictional Limit Bill**, the **Indian Naturalisation Amendment Bill** and the **Repealing and Amending Bill** were all passed.

The Member for Commerce and Industry then moved that the **Indian Tariff Amendment Bill** be considered. Rao Bahadur B. N. Sarma moved that the duty be raised from 15 per cent to 20 per cent. Mr. Crum opposed the motion, saying that practically all hide exporters were of opinion that the proposed duty should be reduced. The Member for Commerce and Industry declared that the figure proposed by Government was the fairest that could be taken. The motion was negatived. Mr. Sarma then moved that in column 4 in clause 3 the proviso be omitted, which was tantamount to deleting the clause giving rebate between the various parts of the Empire. Mr. Sarma's speech was frequently interrupted by the Member for Commerce and Industry because he was continually arguing on the general question of imperial preference. No general question of imperial preference, said the Member for Commerce and Industry, was at present suggested. It was, however, in the interests of India that the hides and skins produced in India should be tanned in India if possible or within the British Empire if it is not possible to tan them in India. Mr. Sarma's amendment was put to the vote and lost. Mr. Sarma then moved that only 5 per cent. instead of 10 per cent. rebate be allowed to the Dominions and his motion was again lost. After an appeal by the Member for Commerce and Industry to Mr. Sarma not to move the next amendment on the paper Mr. Sarma moved that in clause 3, column 4 of the proviso the following be added "Provided, further, that no rebate shall be granted to any Dominion, State or territory which discriminated against the Indian tariff policy." The motion was put and negatived.

The Home Member next moved that the **Workmen's Breach of Contract Amendment Bill** be introduced. He explained that the Workmen's Breach of Contracts Act had been found capable of abuse by employers and the amendment he proposed would remedy these and other defects. Magistrates would be given discretion in a certain direction and under the new Act imprisonment other than rigorous

could be ordered for breach of contract. Pandit Madan Mohan Malaviya pressed for the repeal of the Act. After some further discussion the Bill was introduced.

At the meeting on September 18 the Member of Commerce and Industry introduced a Bill to extend the duration of the **Import and Export of Goods 1916** by two years and six months, as it was necessary to retain the powers of control in the interests of India and the Empire for some time to come.

The Viceroy then rose and said that the **Indemnity Bill** was now before the Council. The Home Member, in introducing the Bill, explained that it was to indemnify officers of Government and other persons for *bona fide* acts in the course of martial law during the recent disorders and to provide for the continuance of the sentences passed by the courts established under martial law. Such legislation, he said, was inevitable after a period of martial law. It left the question of facts open to the proposed Committee of Inquiry and there was nothing to prejudice the Committee's findings or the possible action by Government on its report. The Bill did not affect appeals to the Privy Council or relate to punishments or sentences by the Commissions appointed under the Martial Law Ordinance 1919. Payment and compensation for property taken or used under Martial Law was provided for. The Government would appoint two judges, one European and one Indian, to examine and advise on all the sentences imposed by the Martial Law Tribunals. The Government's power to punish its own officials was in no way affected by the Indemnity Act nor was the Committee of Inquiry in any way forestalled. It was the supreme duty of Government to protect their officers if any decisive action and efficient service was to be expected from them. If the Bill were not passed, officers of Government would be liable to suits from any malicious persons. No reasonable man could ask that a man who had done his duty should be left in such a position. Further, if the Government did not validate the retention of the men now in jail, the public safety would be endangered.

Mr. Kamini Kumar Chanda moved an amendment which was as follows: "That the consideration of the motion should stand over till after the submission of the Report of the Committee of Inquiry on the Punjab disturbances." He contended that, in a way, the Indemnity Bill usurped the functions of the Committee of Inquiry. If Government acted on the assumption that what their officers did was right and proper, why appoint a committee at all? He declared that there was no open rebellion in the Punjab, but the people wished to defy Sir Michael O'Dwyer's desire to suppress political agitation in the Province and therefore the Committee of Inquiry should have a free hand and should not be hampered in any way. Sardar Sundar Singh supported the Bill: he was fully assured that no man who had not acted properly would go unpunished. Pandit Madan Mohan Malaviya spoke for nearly four hours. Most of his speech was a bitter attack upon the manner in which the Punjab Government had suppressed the disturbances. He delivered some detailed criticisms of the provisions of the

Bill and read telegrams from Lahore denying Sir Umar Hayat Khan's statement in the Council that the inhabitants of the Punjab did not want a further inquiry. He also read some newspaper extracts condemning the policy of proceeding with the Bill before the Committee submitted its report, and said that truth, honour and justice demanded that Government should allow the Committee of Inquiry's report to be submitted to His Majesty's Government. The whole country would be grateful if this was done. He concluded with an impassioned appeal to postpone the introduction of the Bill. Mr. Thompson, Chief Secretary to the Punjab Government alluded to the Pandit's speech as amazing. He denied that the Punjab Government had prevented any English or other papers from publishing a true statement of the occurrences in the Punjab. He said that he would be able to show that all the cases mentioned by the Pandit were distorted or exaggerated. For instance, the Pandit had said that 530 persons had been killed in Amritsar. Now the Punjab Government had issued proclamations asking all persons to give all possible information on the number killed and the inquiry showed that the number killed was 291. The Pandit's picture of the inconveniences which the prisoners at Amritsar had suffered was grossly overdrawn. Mr. Thompson in reply to the allegations by the Pandit said that the Punjab Government had most carefully inquired into the Ramnagar case and two officials who had made a special inquiry entirely supported Colonel O'Brien who had heard the case. The Punjab Government saw no reason for remitting any sentences in this case. He alluded to the terrible mischief caused by false rumours and gave some details of these reports. For example he referred to the report of the Pandit at Amritsar to the Municipality that there was a corpse in a well, the corpse turning out to be an earthenware pot and a bale of cloth. He could not agree with the statements of the Pandit and Mr. Chanda that the Satyagraha movement had been an innocent one. The Maharaja of Cassim Bazaar doubted whether it was wise to introduce the Bill in face of the opinion of a large moderate body in India. Mr. Crum characterised Mr. Chanda's suggestion that officers must take their chance without any indemnity as hideous and ridiculous.

Mr. Hailey, in supporting the Bill, justified the course taken by the Punjab Government. He pointed out that the Pandit in his speech had omitted all mention of the numerous attempts to cut communications. Alluding to the events in Lahore, he gave a graphic account of the Pandit's so-called peaceful demonstration. He said that there was no possible doubt that the mob was imbued with exactly the same spirit as that which actuated the mob at Amritsar, and he read several extracts from the Commissioner's report which formed a crushing reply to several of the Pandit's statements. He also read translations, of startling proclamations inciting the Sikhs, Hindus and Mahomedans to enlist in the *Danda Shik* army. When the Government decided on martial law the riots at Amritsar had displayed a very strong racial feeling while communications, save by wireless had been

cut off. Portraits of the King had been destroyed and inflammatory leaflets were distributed. "It was no fortuitous collection of schoolboys," said Mr. Hailey, "that cut the communications between Gujranwalla and Lahore or looted Rs. 8 lakhs worth of property from the Railway."

Mr. Sachidananda Sinha declared that the introduction of martial law really meant the suspension of law. He contended that almost every shade of public opinion was unanimous that Government should not press the Bill at the present moment. Mr. MacPherson denied that the Indian public was boiling over with indignation at the measures taken in the Punjab. There was a large and sound body of people, for example, in Bihar and Orissa who were grateful to Government for the action taken in the Punjab. After General Sir H. Hudson had delivered a justification of the declaration of Martial Law, Rao Bahadur B. N. Sarma advanced much the same objections to the Bill as other speakers. The Law Member after expressing keen sorrow at the loss of life both European and Indian said that he feared innocent people had been killed while the real instigators of the trouble had escaped scotfree. He said that in every country martial law stepped in when necessary and replaced civil law. The question before the Council was whether a state of affairs had arisen in the Punjab with which the Civilians could not deal. According to all reliable evidence, such a state of affairs had existed. No man in the Punjab said that there was no rebellion in the Punjab. He quoted Mr. Horniman and Mrs. Besant as authorities that there was rebellion in the Punjab. The policy of modern times was that an indemnity act should invariably follow martial law and the necessity for such an act should be obvious. He concluded by laying special stress on the fact that an appeal to the Privy Council was open in all cases. Sir Dinshah E. Wacha said that the Law Member's explanation had convinced him and that he would support the Bill.

Mr. Chanda's amendment that the Bill be postponed was then put to the Council and was rejected.

The motion that the Bill be introduced was then put and agreed to.

At the meeting of September 23 Rao Bahadur B. N. Sarma moved the following resolution "This Council recommends to the Governor-General in Council that a **State Bank** on the lines suggested by Professor Keynes in his annexure to the Report on the Indian Currency be established in India at a very early date." Speaking on behalf of this resolution, Mr. Sarma said that his justification for it was the example of almost every European State. They in India had considered the desirability of establishing a central bank on the lines indicated by the Government of India in 1901. He believed that it was advisable to relieve Government of its present heavy responsibilities and secure the advantages arising from a centralised control of the banking system. It had been suggested, he said, that the Presidency Banks should be amalgamated under one control. But he thought that such large sums as were involved could not be entrusted

to amalgamated banks. The State control of banks should be very stringent and such control would be to the advantage of the people of India. The Raja of Cassimbazaar supported the resolution and also Pandit Madan Mohan Malaviya, who pointed out that Indian banking was in a very backward condition and that the enormous industrial and commercial interests which had grown up in India required sound banking facilities. The Finance Member said that Government supported many of the remarks made by those who had spoken in favour of the resolution. It was, he said, a matter of urgency that the people of India should be encouraged to overcome their hoarding habits. He was not, however, altogether in favour of the immediate establishment of a State Bank. The Presidency Banks had carried on when the Government had their hands full and after the armistice the amalgamation of the Banks was suggested and the opening of a number of branches had been promised. At present the main object was to push forward the work in hand under present arrangements and, when the latter had somewhat developed, the establishment of an Imperial Bank in India could be given consideration to. Mr. Sarma's resolution was put and negatived.

Mr. Crum then moved a resolution: "That the Council should recommend the **electrification of the suburban railways** within 25 miles of Calcutta and improvement generally of the local passenger transport and travelling facilities. By the electrification of suburban railways much quicker train service would be possible. Great numbers of clerks and others were compelled to live outside Calcutta owing to the lack of accommodation in the city itself. As it was, owing to the bad train service, very many people had to catch a train before eight o'clock in the morning in order to get to their offices in time. The Member for Commerce and Industry said that Government had no hesitation in accepting the resolution. He declared that he hoped to discuss the matter further with the officials concerned when he visited Calcutta in the cold weather. The resolution was accordingly adopted. Mr. Sachidananda Sinha then moved the following resolution. "That this Council recommends to the Governor-General in Council that he may be pleased to make a representation to the Secretary of State for India (or, if not, to His Majesty's Government) that an Indian Member chosen from the non-official Indian members of the Council be appointed to the **Indian Army Commission** recently constituted." He said that, as there had been an impression in India for many years that the expenses of the Indian Army had been much greater than the finances of India could stand, it was necessary that a public man be appointed to the Committee to give his advice to the military members. General Bingley announced that Government had anticipated the objection to the Resolution and had appointed Major Sir Umar Hayat Khan to the Commission. He also mentioned that the other members of the Committee would be President Viscount Esher; Members, Sir Michael O'Dwyer; Lieut.-General Sir H. V. Cox; Lieutenant-General Sir W. C. Jacob; Lieut. General Sir H. Hudson; Lieut. General Sir J. P. Du Cane; Sir G. Fell,

Major General Sir W. Gillman; and Secretary, Brigadier General C. M. Wagstaff. Pandit Madan Mohan Malaviya declared that he was disappointed in the statement made by General Bingley. He did not desire to say anything discourteous against Sir Umer Hayat Khan but he did not think that the selection would be welcomed by the Indian people. The questions to be decided greatly affected the life of the people of India as a whole. Although he greatly respected military men, he did not think the latter were capable of judging of things which had so intimate a connection with the life of the people. The time for adjournment arrived while the Pandit was still speaking and he was asked to resume his seat.

At the meeting on September 24 the Law Member presented the Report of the Select Committee on the Bill further to amend the **Provincial Insolvency Act, 1907**, the Bill to amend the **Indian Arms Act, 1878**, the **Indian Coinage Act, 1906**, the **Cantonments Act, 1910**, the **Cinematograph Act, 1918**, the **Indian Merchant Shipping Act, 1859 and 1883**, and the Bill to remove the restrictions imposed on the withdrawal of capital from the money market by Companies. They were all passed without discussion.

The Finance Member then moved for leave to introduce a Bill further to amend the **Indian Paper Currency (Amendment) Act, 1917**, and also that His Excellency should suspend the rules of business, and admit the Bill to be taken into consideration. In introducing the Bill (for details, *vide* The Laws of 1919) Mr. Howard said that the amount of Treasury Bills outstanding amounted to 50 crores and advances to the amount of 13 crores had been obtained from the Presidency Banks. As for other measures which would meet the present difficulty, Mr. Howard said that these were firstly the sales of new Treasury Bills, secondly further ways and means advances from the Presidency Banks, thirdly, remittances of gold and silver by the Secretary of State. The first, he said, only postponed the evil day. As for the second, it was improbable that banks could let Government have any more funds, and it was indeed very likely that they would have to ask for the return of previous advances. In regard to the third, all members knew the stringent position as regards silver, and as far as gold was concerned, the present Bill provided that the issue of notes was to be backed by gold coming from the United States. The reason for the present urgency of the measure was that Government had deferred the introduction of the Bill to the last possible moment owing to the undesirability of such a financial measure. Rao Bahadur B. N. Sarma opposed the Bill. He described it as a tinkering measure. The normal channels for the flow of gold and silver must be re-opened, and the issue of more notes must be backed by the British Treasury. The Bill was then taken into consideration and passed.

The debate on the **Indemnity Bill** was then resumed. Pandit Madan Mohan Malaviya moved that the provisions of the Bill should be examined by a select committee as the matter was an extremely important one. The motion was put to the Council and negatived. The Home Member then introduced two amendments,

the first providing the substitution in the preamble of the Bill the words "Martial law has been in force" for it has been necessary for the purpose of maintaining and restoring order to resort to martial law, the second that in the second clause of the preamble the word "certain" be inserted between the words "indemnity" and "officers". The object of the amendments was to remove any objection as to whether martial law was justified or not. Both amendments were passed. The Home Member introduced an amendment that for the words "commencement of this Act" the words "26th August 1919" be substituted. This amendment was adopted. Pandit Madan Mohan Malaviya proposed that for the words "Provided that such officer or person has acted in good faith and in the reasonable belief that his action was necessary" be substituted for the words "Provided always that the indemnity hereby granted is granted upon this supposition and condition and all such acts etc. shall have been done *bona fide* necessarily and properly and without needless severity in furtherance and extension of the objects for which martial law was proclaimed as aforesaid." The amendment was rejected. There were three amendments in the name of Mr. Sarma, Pandit Madan Mohan Malaviya and Mr. Sinha. All the three amendments objected to clause 2 as at present constituted as being unsound law. All the amendments were rejected. Rao Bahadur B. N. Sarma moved that clause 4 be omitted. Among his objections to the clause was the fact that the ordinary right of appeal against sentences pronounced under martial law was taken away and that in some cases the evidence was not clearly recorded while in others there was no clear judgment. The Home Member pointed out that the clause was necessary. He had already announced that two High Court Judges would revise the sentences of the summary courts constituted under martial law and those who had only committed offences against military regulations and not against ordinary law would be released. If the clause were omitted, a number of dangerous criminals would be thrown on the country. The amendment was accordingly rejected. The next amendment was to the effect that the words "in certain cases subject to limitation specified here and below" be added to paragraph 3 of the preamble and was adopted. Pandit Madan Mohan Malaviya then moved that sub-clause (b) be inserted as a new clause 7 and that to the said new clause certain words be added, the object of which was that any order made by His Majesty in Council on any appeal presented by any individual against any conviction or sentence passed by a tribunal constituted under martial law might be taken advantage of by any other person in a similar case. The Home Member refused to accept the amendment, but announced that Government would feel bound to extend any finding of His Majesty in Council with regard to one particular case to similar cases. Replying to an amendment by Mr. Sarma that an addition be made to clause 7 to the effect that the Act should be in force till the Committee appointed by the Governor General in Council to inquire into the recent disorders made its report and for a

period of three months thereafter, the Home Member repeated his statement that the Bill under discussion had nothing whatever to do with the findings of the Commission and Mr. Sarma's motion was rejected.

At the final sitting on September 25, a number of speeches were delivered on the Bill which was put to the Council and passed.

The Viceroy then said that it was usual for the Viceroy to address members both before

and after a session of the Council. In the present circumstances, however, he thought that the Honorary Members would prefer to close the session as soon as possible. Within the last three weeks he had dealt comprehensively with matters of importance and nothing further had transpired since then. It only remained for him to thank the members for their work and wished them godspeed and safe return to their homes.

The Council then adjourned *sine die*.

Bombay Legislative Council.

At the March session of the Bombay Legislative Council H. E. Sir George Lloyd presided for the first time and in his introductory speech he referred to the services of the Navy and the Army and paid a tribute to the achievements of Mahratta soldiers in the fighting line. After referring to the outbreak of influenza and cholera in the Presidency and to the prospect of famine in the near future His Excellency paid a tribute to the officers of Government who had borne the immense strain entailed upon them by the war and who, in spite of a depleted staff, had discharged their duties with courage, ability and loyalty to the interests of the country. He explained his views on social reform and foreshadowed the increasing and permanent interest of Government in education, the improvement of sanitation and the amelioration of the lot of Government officers in the lower grades. He emphasised the need for housing reform and for improvement in the condition of labour in Bombay asking for such measures as Government might take the sympathy and support of the press and the public. The Hon. Mr. G. K. Parekh speaking as the father of the Council thanked His Excellency and assured him of the sympathy and co-operation of the Council.

The Budget estimates for 1919-1920 were introduced by the Hon. Mr. Carmichael. The Budget for 1919-20 opened with a balance of 4,61,26 which, it was anticipated, would be raised to 4,62,98 by the close of the year, the total revenue being estimated at 10,38,27 and the total expenditure at 10,36,55. The estimates thus exhibited a surplus of 1,72. The total revenue showed an advance of 95,19 over the current year's budget and of 57.08 over the revised estimate. The total expenditure showed an increase of 1,33,53 over the current year's budget and of 1,24,66 over the revised estimate. The budget estimates for the ensuing year included 9,80 for expenditure out of unexpended balances of the Imperial grants given for education, sanitation, agriculture and allied objects and medical relief since the year 1911-12. The budget also provided about 47,00 on account of the grant of war allowances or about 40,00 in excess of the charges for grain compensation allowance which would otherwise have to be paid to the low paid establishments. Also provision was made for expenditure in connection with the relief of dis-

treas in consequence of the present agricultural situation. Direct expenditure on famine relief was estimated at 50,00 for 1918-19 and 45,00 for 1919-20, one-fourth of which was a charge on Provincial Revenues, the rest being borne by Imperial.

The Hon. Major Fernandes obtained leave to introduce a Bill for the **prevention of juvenile smoking**, the operative part of which provided against any person selling to a person under the age of 18 any tobacco under penalty of a fine on a first conviction not exceeding Rs. 20 and Rs. 100 in the case of the second and subsequent convictions. The Bill further authorised a police officer to seize tobacco in the possession of any person under the age of 18. This Bill came up for the first reading at the September session and at the end of a lengthy debate was withdrawn, the Government attitude on the subject being neutral.

A motion introduced by the Hon. Mr. Parekh recommended that the **supply of fodder** to the people should not be restricted to the requirements of plough and milch cattle but should be large enough to meet the need of cattle of all ages. This was opposed by the Hon. Mr. Purshotamdas Thakurdas on the ground that it was not within the scope of practical politics, and the Hon. Mr. Carmichael opposed it on behalf of Government. The motion was lost on being put to the vote.

The Hon. Sardar Syed Ali El Edroos moved a resolution recommending that the **Koran** should be taught during school hours in all Municipal Urdu schools where the Compulsory Education Act may be in force, provided that the expenses of such teaching are borne by the local Muslim Community. The Hon. Mr. Bhurgri was for amending the motion so as to read that the Koran should be taught outside school hours. After a number of speakers had spoken, Sir Ibrahim Rahimtulla deprecated the advocacy of a measure which would still further handicap the Muslim pupils in the race for education, as compared with non-Muslim pupils. Muslim pupils were now compelled to study Urdu in addition to one of the local vernaculars before they could study English. The effect of passing this resolution would be to compel him to undergo instruction in the Koran during school hours. Speaking

(Figures in thousands of rupees.)

as a Mussulman, he said this was not in the interests of Mussalmans themselves. On behalf of Government, he could accept neither the original motion nor the amendment.

The Hon. Dewan Bahadur K. R. Godbole moved that the Government of Bombay be recommended to move the Government of India to revise the **feeder railway terms** of 1913 and 1914 to suit the present financial conditions in India, so as to induce private capital to come in freely for the starting of the feeder railways that were required for the development of the Presidency. After several speakers had supported the motion it was withdrawn at the request of the Hon. Mr. Carmichael, who said that Government were awaiting the decision of the Government of India in this matter.

The Hon. Mr. Strangman next moved that early steps be taken towards the erection of a new court-house for the **Court of the Judicial Commissioner of Sind** and for the equipment of the existing Court with an adequate and competent staff. He described the existing Court house as obsolete and insanitary, and lacking in modern conveniences, and the staff, which was paid on a lower level than the corresponding Courts of Oudh and the Central Provinces as inefficient and overworked. The motion was strongly supported by members from Sind and was accepted on behalf of Government after it had been explained that the financial provision made in 1914 for this purpose could not be utilised owing to the war. The budget for the coming official year contained provisions for it.

At the July meeting of the Council the Hon. Mr. G. K. Parekh moved a resolution with regard to the signing of the **Peace Treaty** expressing the profound thankfulness of the Council and tendering its congratulations to Great Britain and her Allies. His Excellency, in putting the resolution to the Council, said the whole Empire including India had emerged secure from the struggle with unstained honour. The termination of the war would bring new responsibilities to India and it was the task of his Government and the members of the Council to guide India's national aspirations and enthusiasm for the awakening of which the British people were responsible, but he asked them to remember that national development was perfected by steady advance rather than by forced marches.

After the Budget Debate the Bill further to amend the Bombay Port Trust Act, the Bill further to amend the Bombay Local Boards Act and the Government Occupants (Sind) Act were carried through the three stages without discussion. The Bill to amend the Bombay City Tobacco Act was read a first time and referred to a Select Committee.

Among the resolutions was one by the Hon. Mr. Paranjpye recommending Government to issue instructions to Commissioners and Collectors asking them to include among the nominated members of the various local boards and municipalities suitable men from the **depressed classes** whenever such men were available. The Government accepted this resolution with a modification that the officers in question should give effect to this recommendation "as far as possible," and thus modified, the resolution was carried. Another resolution was moved by the Hon. Mr. Belvi

who asked the Government to make it compulsory on all Municipalities and local bodies in the Presidency to throw open the existing wells and dharamshalas owned by them to members of the untouchable classes or to maintain separate wells and dharamshalas for their use. The Council was divided on the question. The champions of the depressed classes urged that since the latter contributed to the revenues of the local bodies they were entitled to the use of the works constructed from the general funds. Against this, it was urged that, if the resolution was put into effect, it would hurt the religious susceptibilities of the people of the higher classes and would widen the gulf between the two classes of the people. The Government view, which was put forward by the Hon. Sir Ibrahim Rahimtulla, was that this was a matter which came within the province of the local bodies themselves, and the Government had no legal power to compel municipalities and local boards to act in the manner suggested in the resolution. The Government, therefore, did not propose to take any decided line on the question, but left it to the Council to decide it themselves. On being put to the vote, both the resolution and an amendment were lost.

At the September session of the Council His Excellency the Governor made a pronouncement on the **housing problem** in Bombay City, in which he said that he had hoped to arrive at some concrete proposals for the solution of this problem within six months of his arrival. But the attention of Government had been occupied by disturbances and agitations during the early part of the year to the detriment of all other business. Government had extended the period of the Rent Act in Bombay not as a substitute for housing operations but as a necessary palliative to those who needed it for another two years during the time the Government plans were being matured and schemes undertaken. The demand for accommodation was confined not only to the labouring classes but almost to every other class, whether Indian or European. They must provide at least fifty thousand one-room tenements for the labouring classes in as short a time as possible. Government as an authority were going to do something but they counted on other local authorities such as the Port Trust, Railways and others.

A resolution by the Hon. Mr. Purshotamdas Thakurdas urging Government to accelerate the pace of construction of **irrigation works** in the Presidency led to a lengthy debate. H. E. the Governor assured the Council that it was merely a question of finance and said that Government did not subscribe to the point of view put forward by some members that these irrigation works should be looked at from the percentage of profit they gave. Government looked at the matter from the point of view of the immense indirect good they did to the owners of land. Mr. Thakurdas pressed for a division which resulted in the resolution being carried by 22 votes against 17. Another resolution from the same honourable member asking the Government to offer further inducements to cultivators to sink wells was also discussed at some length, but in view of the official explanation that the data regarding the number of wells in the Presidency were not yet ready, he obtained permission to postpone it.

Madras Legislative Council.

H. E. Lord Willingdon reconstituted the Council in July and in doing so he has, in a certain degree, anticipated the Montagu-Chelmsford reforms by the nomination to the Council of a number of Indians to represent the minorities who would otherwise remain unrepresented and by increasing the non-official majority.

The first meeting of the Legislative Council was held in February. The avowed object of this session was the consideration of the amended draft financial statement. But it happened that by far the most important legislative business of the year was accomplished at this session. The Hon'ble Mr. B. V. Narasimha Ayyar brought in a motion for the adjournment of the house for 24 hours on the ground that certain paragraphs which appeared in the Administration Report of the Presidency betrayed an attitude antagonistic to popular aspirations, that the Government were creating the impression that they were taking sides with the capitalists in the economic struggle of the labourers. He adduced, as an additional reason for the motion that it was widely believed that the circular which was then under circulation among the members of the Indian Civil Service was engineered by the Government and that the Government should openly dissociate themselves from both these allegations. H. E. the Governor, however, disallowed the motion. The Hon'ble Member stated that the ruling had not the support of any provision of law or statutory rule and protested against the ruling by leaving the Council Chamber for a few hours. The Hon'ble Sir Alexander Cardew then presented the draft Financial Statement, the discussions on which extended for over three days. On the succeeding four days the consideration of the Madras City Municipal Bill and the Madras Agricultural Pests and Diseases Bill was the chief business. The **Madras City Municipal Bill** was by far the most important piece of legislation that the Council had before it during the administration of Lord Pentland and no less than four and a half days at this session and nearly two days at the March session were devoted to the consideration of its various clauses. No less than 130 amendments were proposed to the various sections of the Bill. They related, among other things, to the securing of the panel system of appointing its chief executive officer, powers for fixing the salary that should be paid to the higher officers, the representation of the Muhammadans and other minorities, the prevention of persons interested in contracts with the Corporation from becoming members of the Corporation Council and for securing additional powers for the imposition of new taxes. The amendments were given full consideration by the Government and such of them as were not opposed to the principles underlying the proposed legislation, were accepted by the Government. The Bill in the form in which it was finally accepted by the Council gave effect to the recommendations of the Decentralisation Commission in regard to the control of the Local Government of the City Municipal Corporation. It conferred on the Council full control over

taxation and the budget subject only to certain statutory limitations and full powers in regard to the staff, the right of the Local Government to exercise a veto in the case of certain high officials being now reserved. It transferred many powers from the Local Government to the Council and from the Council or the Standing Committee to the Standing Committee or the Commissioner. It also increased the borrowing powers of the Corporation and authorised it to raise new taxes. The changes introduced in the constitution of the Corporation and in the mechanism of its working will have the effect of popularising the administration and associating a much wider circle of people in the task. The motion for the City Municipal Bill being passed into law had, however, to be deferred to the meeting held in March as the sanction of the Government of India had to be obtained on certain details. An interesting scene occurred when the motion that the Bill be passed into law was brought in. The Hon'ble Mr. B. V. Narasimha Ayyar, in opposing it, began to read his speech in Tamil. The President of the Council (Lord Pentland) pointed out that though the matter was not provided for by the rules he would advise the gentleman to adopt the usual practice. Mr. Narasimha Ayyar, however, declined to do so and asked for a ruling prohibiting a speech in Tamil. The President had to rule him out of order as it was contrary to the traditional practice of the house.

The **Madras Agricultural Pests and Diseases Bill** was then taken into consideration. The few amendments proposed to the clauses of the Bill related to matters of detail. They were mostly accepted by the Government. The non-official members, in giving their support to this Government measure, recognised that it was a piece of beneficent legislation intended for the welfare of the agriculturists in this part of the country. The Bill was passed into law on the 13th February, 1919.

Of the resolutions on matters of general public interest moved at the March meeting, the one on which attention was keenly centred was that brought forward by the Hon'ble Mr. B. V. Narasimha Ayyar that a committee of officials and non-officials be appointed to enquire into the grievances of the public regarding the distribution or supply of kerosine oil, paddy and other **necessaries of life**. Allied to this resolution were those brought forward by the Hon'ble Mr. K. Rama Ayyangar for the allotment of funds to relieve distress caused by the high prices of food-stuffs and by the Hon'ble Mr. B. Venkatapathi Raju asking for the issue of instructions to the Director of Civil Supplies to remove the inter-district restrictions on the transport of food-stuffs. Nearly all the members of the Council took part in the debate. The Hon'ble Sir A. Cardew, on behalf of the Government, explained that the Government were alive to the seriousness and gravity of the situation. While they sympathised with the hard lot of the people created by the high prices which were unparalleled in history, even in the worst famines, they were of opinion that the restrictions on transport were necessary.

The resolution recommending that steps be taken to initiate legislation for checking the growth of **juvenile smoking** was next considered. The Government were not satisfied that on the information before them legislation on the subject could be undertaken. The mover withdrew it on the assurance given by the Government that they will communicate the discussions on the resolution to the local bodies for their opinions and invite also the opinions of other Local Governments. The next resolution related to the proposal that certain of the recommendations of the Government of India made in their resolution on Local Self-Government for the non-officialisation of local bodies should be given effect to immediately. The Hon'ble Mr. P. Rajagopalachariar, on behalf of the Government, promised that the suggestion would be considered in connection with the District Municipalities and Local Boards' Bills which were then under revision. The resolution was thereupon withdrawn. A resolution suggesting that the Government of India should be approached for a lump grant for the development of industries in this Presidency was also withdrawn when the Government pointed out that under the existing financial relations, the proposal was unacceptable.

At the April meeting, the Hon'ble Mr. Todhunter presented the Budget for 1919-20. A Bill to amend the Madras Outports Fees Act was then introduced and referred to a select committee.

The Council newly constituted by H. E. Lord Willingdon met on the 13th August.

A motion to amend the rules of debate so that English might be the sole medium of debate in Council was brought forward by the Hon'ble the Advocate-General, seconded and approved. The report of the select committee on the Outports Landing and Shipping Fees Bill was then presented; the Bill and the report were then taken into consideration and the motion that the Bill be passed into law was carried. A Bill to amend the Madras Civil Courts Act was also passed into law without reference to a select committee. A Bill to amend the Madras Forest Act, which was purely of a non-contentious nature and which was entirely a sequel to the recent appointment of a Chief Conservator of Forests who took the place of the Board of Revenue in regard to forest administration, was then brought forward

and it was passed into law. The non-official members then elected the Finance Committee for the coming year.

At the November session the **interpellations** numbered 320 and there were 35 resolutions. Lord Willingdon took the occasion to exhort the interpellators to have some consideration for the overworked Secretariat and to use their powers of interpellation only in regard to matters of real public interest, and suggested that the Publicity Board and the Editor's Table may be freely used to obtain the information they wanted. He also advised them to take the District Officers more into their confidence as most of the matters interpellated upon were within their knowledge.

Of the legislative measures the **Village Courts Bill**, though a small measure, was of great importance for rural India. The Bill was passed into law and vests full and autonomous powers in the hands of villagers to deal with the civil and criminal litigation, the former up to Rs. 50 and the latter confined to petty cases of theft and mischief arising in the village. These courts are to be panchayet courts, the members of which will be wholly elected by the villagers, the members, in turn, electing their President. These courts will practically have exclusive jurisdiction of village litigation. It is hoped that this measure will tend to check the volume of wasteful litigation characteristic of South Indian villages in recent years. The **District Municipalities Bill** was a comprehensive measure introduced to revise and bring up-to-date the law relating to these bodies which are springing into existence in ever increasing numbers in the Presidency. As in the case of the City Municipal Act, the measure is intended to vest larger powers in the municipal bodies, increase their elective element and develop their resources with a view to enabling them to provide for social amenities of the communities better and more efficiently. Non-official members sought to have the measure postponed till after the Reforms had been introduced, as they were of opinion that the Bill could be further enlarged and made a better instrument of popular and progressive reform in urban areas in the districts. This, however, was strongly resisted by the Government and by a section of non-officials who felt that to postpone it would be to throw away an amount of labour and thought bestowed on the Bill, which, even its opponents admitted, was a great improvement on the present Act.

Bengal Legislative Council.

From the legislative point of view the year was an outstanding one, for not only was the cold weather session of the Bengal Legislative Council the most fruitful for several years in measures actually passed, but two acts passed marked a new stage in legislative practice in the Province. These were the Juvenile Smoking Act and the Bengal Primary Education Act, the first private member's bills to be passed in the Bengal Council. Dr. Suhrawardy was the author of the former and Babu Surendra Nath Roy of the latter. When Mr. Roy

introduced his Bill the whole question of primary education was under the consideration of the Government, and the Bill, when it had been amended by the Select Committee, fitted in so well with the views of the Government as to the best method of proceeding with the extension of primary education that they accepted Mr. Roy's measure which, it is hoped, will mean a large measure in advance.

The Bengal Tenancy Bill, a measure to amend the Tenancy Act in various formal and minor details, was passed at the first meeting

of the year on January 21, while the most important measure to become law was the **Village Self-Government Act**, introduced by Lord Sinha in April of the previous year, and not actually passed until the last meeting of the cold weather session on April 14th. The object of this Act is to establish elective village committees to administer village affairs and exercise restricted judicial powers. This measure proved to be very controversial, and when it emerged from the Select Committee there were so many amendments to it that a motion was carried to re-commit it to the Committee. It came to the Council again at the April meeting, and even then did not satisfy the non-official members, for the amendments of which notice had been given numbered 221. Their disposal took the greater part of two days, and 79 were lost, 62 withdrawn, 62 fell through, being consequential, and 12 were accepted. This Bill was piloted through the Council by Sir Henry Wheeler, in the absence through illness of the Maharaja of Burdwan.

On February 18, after the Village Self-government Bill had been sent back to the Committee, Rai Mahendra Chandra Mitter moved that Government take steps to standardise **prices of foodstuffs and cloth**. Sir Henry Wheeler admitted that prices were high and that the poor were suffering, but said they could not bring forward such a remedy for a matter which was not provincial but a question for all India, nay of all the world. He pointed out the difficulties with which any system of control was beset, and said he did not think it wise to disturb normal trade conditions or upset the market, though they were watching the situation carefully and should action appear necessary they would take it. The resolution was defeated.

During the **Budget debate**, which extended over three days, a number of interesting resolutions were moved.

Mr. Phelps proposed that two lakhs be provided for improving the medical services in the hospitals in Calcutta, but, on Sir Henry Wheeler assuring him that there was no intention on the part of Government of reducing expenditure on Calcutta hospitals during the year, the honorary member withdrew his motion.

Rai Radha Churn Pal moved that five lakhs be provided for the extension of primary education in Calcutta, the amount to be met by corresponding reductions in the provision made for building nurses' quarters at the Medical College Hospital, and in the grant-in-aid for education. Sir Frank Carter and Sir Rajendra Mookerjee opposed the motion, which found no support even from non-official members and was lost.

In addition to the measures already referred to, the Calcutta Hackney Carriage Bill, transferring the control of gharries in the city from the Corporation to the Police, was passed into law.

When the Council assembled for the month soon sitting in Calcutta on July 3, the Maharaja of Burdwan moved the withdrawal of the **Calcutta Municipal Bill** (which had been before the Council and the Select Committee

for nearly two years) on the ground, mainly that the Corporation itself did not want the organisation proposed to be set up under the Bill. He said that the Corporation had changed its mind, and now protested against some of the things they formerly asked for. The motion was carried.

The **Food Adulteration Bill** was passed at the same meeting, and a Bill to further amend the Calcutta Police Act, 1866, and the Calcutta Suburban Police Act, 1866, designed to strengthen the hands of the Commissioner of Police and to improve the discipline of the force, was referred to a Select Committee.

Sir Frank Carter moved for a commission of inquiry into the **leper problem** and legislation required in connection with it, and advocated the establishment of a leper colony in some hill station or semi-hill station, where they could be comfortably housed and could work for their keep. The present leper asylum at Gobra, which was quite inadequate for its purpose, could then be used as an observation camp, where suspected cases could be watched.

Sir Henry Wheeler said the present leper population of Bengal was about 17,000 out of total population of 45 millions, and there were three asylums—at Gobra, Bankura, and Rancegunge. He said what was needed was a whole-India inquiry, and that he was quite willing to bring the question to the notice of the Government of India.

On this promise the resolution was withdrawn.

Four resolutions on the subject of high prices were moved at this meeting, and, in reply, Mr. Cumming gave a resume of what the Government had done. They had, he said, tried to use the food available for the greatest good of the greatest number. Steps had been taken to control the price of Burma rice, but it was practically impossible to regulate the supply of Bengal rice. There was, too, a difficulty in that the people would not take Burma rice if they could possibly get Bengal. Three of the resolutions urging the Government to take steps to increase supplies and to reduce prices were accepted.

At the September meeting, on the motion of Mr. W. H. Phelps, a Committee was appointed to consider the whole question of the causes of excessive land values and high rents in Calcutta, and, if possible, to suggest remedies.

The Maharaja of Burdwan, while sympathising with the resolution, feared that it would not provide an immediate remedy for the excessive rents which had been referred to. If the control had had good effects in Bombay, however, there would be good cause for an investigation in Calcutta, and he therefore, on behalf of the Government, accepted the motion, which was then carried unanimously.

At the next meeting, on November 19, a resolution advocating that the Government approach the Government of India for a grant of fifty lakhs of rupees, or such sum as they thought necessary, for the relief of sufferers through the Eastern Bengal Cyclone, was carried; while at the last meeting of the year on December 18, the Cruelty to Animals Bill was adopted.

The United Provinces Legislative Council.

The United Provinces Legislative Council met at Allahabad on 24th January, Sir Harcourt Butler presiding. Among the **resolutions** was one by Mr. Chintamani requiring the development of industries should be a provincial subject with full liberty of action to the Local Government and Government of India officers should stand in the relation of advisers to the Local Government. Mr. Chatterjee said the question was under discussion between the Government of India and the Local Government and he was not in a position to express any opinion now. Mr. Chintamani also moved that the Government of India should allow the Local Government to draw upon its accumulated balance to the needed extent for expenditure non-recurring or recurring in the coming financial year. Mr. Sim said the Hon'ble member was simply proposing that Local Governments should budget for bankruptcies. As regards the first part, Government had no objection to make provision for non-recurring expenditure in the coming financial year. The first part of the resolution was carried and the second lost. Mr. Chintamani also moved that the Lieutenant-Governor should abrogate the rule requiring Deputy Collectors to call on Superintendents of Police. Mr. O'Donnell replied it must be left entirely to the good feeling of officers themselves to decide whether they will adhere to the practice or not. It was not a matter for determination by official order. The resolution was withdrawn. Mr. Shahid Hosain moved a resolution of congratulation to Lord Sinha on his elevation to the peerage. His Honour said he wished to associate himself and his Government and his officers with the resolution whole-heartedly.

The Council met at Lucknow on 4th March when Mr. Sim presented the **Financial Statement**. The Budget estimates for the financial year 1919-20 provide for an income of Rs. 8,11,03,000 and an expenditure of Rs. 8,53,56,000. The estimated income is Rs. 83,14,000 in excess of the original and Rs. 43,99,000 in excess of the revised estimate for the current year, while the estimated expenditure exceeds the original budget figures of 1918-19 by Rs. 1,34,24,000 and the revised by Rs. 99,94,000. Of the increases anticipated land revenue is responsible for Rs. 33,37,000. This is due to the large suspensions in the year 1918-19, the recurring increase being small. New settlements account for an increase of Rs. 9,32,000 under the main head of shared revenue, the provincial share of which is Rs. 3,50,000. Although the year will open with heavy arrears, it is anticipated that, owing to the continuance of unfavourable agricultural prospects, remissions and suspensions during the year will amount to nearly a crore. The heavy fall in the income from stamps is, it is thought, of a temporary nature, and the estimates provide for an increase of three lakhs compared with the revised estimate of 1918-19, the provincial share of which is Rs. 1,50,000. A large increase of Rs. 25,37,000 is anticipated under excise. This is due to the intention of the Local Govern-

ment to impose drastic enhancements of excise duties with effect from the next financial year.

At the meeting of the Council on 13th March there was a spirited debate on the proposed publication of a journal on educational lines by the Government, Saiyid Raza Ali maintaining that it was almost impossible for Government to run a paper on non-controversial lines. Pandit Gokhran Nath Misra supported this view, while Mr. Chintamani and Pandit Tara Datt Gairola declared that the experience of the "War Journal" had shown that there was room for a publication of the kind contemplated by Government. The United Provinces Public Gambling (Amendment) Bill, the United Provinces Municipalities (Amendment) Bill and the United Provinces Primary Education Bill were passed.

The discussion of the Budget took place on 7th April. Among the speakers were Pandit Gokaran Nath Misra, Mr. Chintamani, Mr. Crawshaw, the Maharaj-Kumar of Benares, the Maharaja of Balrampur and Sheikh Shahid Hosain. All the speakers offered their congratulations to Mr. Sim, the Financial Secretary, on the excellence of the Budget, especially dealing with the expenditure on education. Mr. Sim thanked his non-official colleagues for the able assistance he had received from the Finance Committee. The Government accepted a resolution moved by Mr. Chintamani recommending the early consideration of the subject of minute subdivision of agricultural holdings and the taking of such steps to remedy the evil as may be found practicable.

At the meeting of the Council at Naini Tal on 2nd June Mr. Lambert, who introduced the **Town Improvement Bill, 1919**, mentioned that advisory committees had for some time been at work examining improvement schemes for Lucknow, Allahabad and Cawnpore and the reports from Lucknow and Cawnpore were now ready. In both cities schemes of far-reaching importance had been considered and the benefits which they were designed to confer should be realised as soon as possible. Since the end of April they had been entitled to assume the assent of the Secretary of State to the introduction of the measure and Government was anxious that no further time should be lost in pressing on this important piece of legislation.

At the meeting of the Council at Naini Tal on 22nd September, Mr. Lambert moved that the U. P. Town planning Bill be taken into consideration and passed. Munshi Narayan Prasad Asthana moved certain changes, but these were rejected by the Government. Several other minor amendments proposed by Hon'ble members were lost. The Bill was passed and His Honour congratulated the Council, the committees concerned and Mr. Lambert, on the passing of the Bill. Munshi Narayan Prasad Asthana subsequently moved another amendment to the Bill providing for appeals to the High Court from awards given under the Act. This was accepted by Govern-

ment, subject to restrictions. Lalla Sukhbir Singh moved a resolution providing for the increase of the rate collection allowed to zemindars on account of the water rate. This was accepted in a modified form.

A resolution to increase the tax on motor cars was lost, another regarding an increase of pay

to the armed police was withdrawn on his Honour explaining that the matter was under consideration. Syed Raza Ali's resolution about the shoe removal question was not supported by his non-official colleagues and was lost by an overwhelming majority.

Punjab Legislative Council.

In the first half of the year 1919 five meetings of the Punjab Legislative Council were held at Government House, Lahore, with the last of which the Presidentship of Sir Michael O'Dwyer came to an honourable close. One meeting was held in the second half of the year.

At the opening meeting, on February 6 and 7, four important Bills were passed by the Council. Of these the **Punjab Courts Act** (Amendment) Bill was based on the conversion of the Chief Court into a High Court and was of a non-contentious nature. The **District Boards Act** (Amendment) Bill, also passed, provided for the inclusion of registration of marriages among the other objects for which fees may be charged and aimed at placing marriage registration on a more definite and permanent basis and at legalising the existing system where it was in force without modifying it. The **Punjab Custom** (Power to Contest) Bill, which proposed to enact restrictions on the power to contest an alienation of immoveable property or the appointment of an heir by descendants or collaterals on the ground that it was contrary to custom, was also circulated for opinion. The Bill owed its origin to a conference at Simla on Punjab customary law and aimed at giving effect to some of the recommendations of that conference. The **Adulteration of Food** Bill which aimed at securing the sale of food in a pure and genuine condition and for prevention of adulteration was passed unanimously. Finally the **Punjab Compulsory Education** Bill, to which a full day's sitting was devoted was passed into law under the new title of "The Primary Education Act," the Hon. Mr. Richey, Director of Public Instruction, being heartily congratulated on the successful enactment of a very urgent measure. Speaking on the Bill Sir Michael O'Dwyer said that it might not be the last and final form of legislation on the subject but it was the most responsible measure undertaken during his term of office. Its success would depend on the co-operation of the public, especially the rural classes. Among the resolutions brought before the Council one, moved by R. B. Bakshi Bhan Lal, recommending that in future not less than three-fourths of the educational expenditure of local bodies should be met from provincial revenues was lost, and another by the same mover, making a similar proposal in the matter of sanitary expenditure, was withdrawn.

The amended draft of the **Punjab Financial Statement** was presented by the Hon. Mr. O. F. Lumsden, Finance Member, at a meeting of the Legislative Council held on March 7. The opening balance was Rs. 2,23,35,000; the revenue Rs. 5,88,50,000; the expenditure, Rs. 6,02,28,000; and the closing balance Rs. 2,09,57,000. The statement dwells on the fact that the year did not pass without financial anxieties, owing to failure of the rains, high prices of food grains, provision of a special war allowance to Government servants, etc.; and provincial balances escaped being indented on only by unexpected and substantial betterments under certain land revenue heads and a large surplus under excise. The presentation of the budget was marked this year by a change of procedure. There had been objections to the old rules and under the new system the Financial statement would be in the hands of the Council a full week for consideration and for amendment by means of resolutions as well as for discussion while the facts were fresh in the minds of members. Another feature of the financial position was that while the war had hindered progress in many directions in the past it was possible in the present year to make up leeway, especially in education, industries and public works. The discussion on the budget took place on March 13 and was chiefly notable for a rebuke administered by the President to certain non-officials for the irresponsible manner in which allegations had been made against the excise policy of Government, without a proper knowledge of the facts and figures on record. Sir Michael O'Dwyer, however, added that Government welcomed well considered advice in the matter as this problem was receiving their close attention. Under the Reform Scheme he said non-official members would probably have a great increase of power and responsibility and the chief direction in which this would be employed was the region of finance. His Honour thought that on the whole the Council had done fairly well in this first experiment and he congratulated the Finance Member on the manner in which he had run the gauntlet of non-official criticism. Of three resolutions on the Budget moved by the Hon. K. B. Fazli-Hussain, two were negatived and one was withdrawn, the discussion of the one proposing an increase under the head of educational expenditure occupying the best part of the meeting held on March 14.

There was a full meeting of the Council on April 7 when cordial tributes were paid to **Sir Michael O'Dwyer**, the retiring Lieut. Governor and the Budget after final discussion was passed. His Honour replied in a dignified and impressive farewell speech dwelling at some length on the success of the measures Government had taken to secure public order in the Province. He emphasised—and his words were justified in a very few days by the tragic events which have left a mark on the province—that Government would not hesitate to use all means at its disposal to check any recurrence of disorder. **Sir Michael O'Dwyer** also made an important statement on constitutional reforms and spoke with justifiable pride on the Punjab's record in the war.

Only one short meeting of the Council was held in the remaining portion of the year on November 10, when **Sir Edward Maclagan** made his maiden speech as President of the Council. His opening speech was brief and unpretentious and made only a passing reference to the disturb-

ances of April which he said had not come within the cognisance of the Council. After paying a tribute to the late Mr. G. W. Parker, a valued non-official European member who died on November 2, **Sir Edward Maclagan** went on to survey the prospects of industrial advancement in the Punjab as the result of the impetus given to manufactures by the war. At the conclusion of his speech four of the unofficial Indian members delivered brief speeches welcoming the new Lieutenant Governor. The only legislation, however, was concerned with two technical measures on the subject of customary law. The Punjab Custom (Power to Contest) Bill introduced on February 6 was referred to a select committee. The Hon. Mr. E. A. Joseph, Revenue Secretary, also introduced the Punjab Limitation (Custom) Bill, the object of which was to amend and consolidate the law governing the limitation of suits relating to alienation of ancestral immoveable property and appointments of heirs by persons following agricultural customs in the Punjab. This Bill was referred to a select committee and the Council adjourned.

Burma Legislative Council.

The first meeting of the year was held on March 13, 1919. The Hon'ble Mr. Webb introduced the Burma Habitual Offenders' Restriction Bill, a measure similar to that passed in the Punjab in 1918. The object of the Bill is to enable the authorities to restrict the movements of habitual criminals to any prescribed area and to require them to report themselves if that is deemed necessary. It was referred to a select committee.

The Hon'ble Mr. Keith presented the Revised **Financial Statement**. He showed that the provincial receipts for the year ending March 31, 1918, had proved four lakhs better than the estimate, and the year closed with a balance of Rs. 95 lakhs, or three lakhs more than was anticipated. The revised estimates for the year 1919-20 were then examined. The original budget provided for receipts Rs. 645 lakhs, expenditure Rs. 615 lakhs. Receipts in the revised estimate were placed at Rs. 655 lakhs, expenditure was unchanged. Thus the balance for the year was Rs. 40 lakhs and the total provincial balance Rs. 135 lakhs. The receipts were swelled by two grants from Imperial Revenues, four lakhs for an Agricultural College at Mandalay, and eleven lakhs towards the cost of the Military Police Operations in the Chin Hills, which involved an increased expenditure of 15 lakhs over the original estimate. If these items are excluded, it is seen that the revenue was five lakhs less than the estimates and the expenditure eleven lakhs less. Land revenue suffered to the extent of 15 lakhs from a shortage in the rice crop, and heavy remissions of capitation tax were allowed in Arakan, where the lack of shipping prevented cultivators from exporting their

rice. On the other hand revenue from forests was five lakhs better than the estimates and income tax increased by seven lakhs. The saving of eleven lakhs on the expenditure side was due to the depletion by the war of the Public Works Staff, which rendered it impossible to carry out projects planned and funded.

The Budget estimates for 1919-20 provide for an increase of Rs. 639 lakhs and an expenditure of nearly Rs. 676 lakhs, of which Rs. 36½ lakhs are to be appropriated from the balance of Rs. 135 lakhs at the end of the previous year. The provincial balance will thus be reduced to Rs. 98½ lakhs, of which only sixty lakhs are available for general purposes. The remainder is specifically reserved for various objects under the orders of the Government of India. The estimated receipts are sixteen lakhs below the revised estimate of receipts in the previous year; but these were swollen by the collection of some seventy lakhs of arrears of land revenue instead of the normal five to ten lakhs. Compared with the last year before the war there is an increase in revenue of seventy-two lakhs, divided between Land Revenue, Forests, Excise, and Imperial assignments. On the expenditure side the allotment for public works rises from 82½ to 131½ lakhs, the largest ever made in the history of the province. Half of this sum is for original works. New roads will absorb thirty-eight lakhs, and six lakhs will be contributed to local funds for the same purpose. Expenditure on forest increases by Rs. 9½ lakhs, but there is a saving of over ten lakhs on police.

The second meeting took place on April 17. The Hon. Dr. Parakh asked questions with regard to the employment of Burmese women and

girls as cheroot rollers in the Federated Malay States, concerning which alarm and suspicion had been displayed in the Rangoon press. The Hon. Mr. Webb's reply showed that there was no ground whatever for the suspicion that girls were being sent to Penang for immoral purposes. Under Burmese rule the emigration of Burmese women was entirely forbidden.

The Hon. Mr. Webb presented the Report of the Select Committee on the Burma Habitual Offenders' Restriction Bill and recommended that the Bill be passed as amended.

The Hon. Mr. Keith presented the Civil Budget Estimates for 1919-20 which he had explained at the previous meeting. No alteration in the Revised Financial Statement had been made by the Government of India, and with the exception of minor changes in the allotment of funds for Irrigation and Civil Works, the figures and explanations submitted at the meeting on March 13th still held good.

The Hon. Mr. Du Bern moved that Government should appoint a Committee to select a site and approve of plans for a **contagious Diseases Hospital** in Rangoon and provide funds for it in the ensuing year. He was supported by three other members. In reply the Hon. Mr. Tonkinson expounded the policy of Government in the matter. He showed that under an arrangement made in 1902 Government, in exchange for a surrender of excise receipts, took over from the Municipality the existing hospitals in Rangoon, but made it quite clear that this arrangement implied no responsibility for hospitals or dispensaries to be opened thereafter. The annual receipts of the Municipality were diminished by two lakhs, while Government incurred responsibility for an annual outlay of Rs. 1,83,000. Government, however, accepted responsibility for the building of the new General Hospital at a cost of nearly thirty-three lakhs, and the annual charges in connection with this hospital alone, met entirely from provincial funds, are now Rs. 4,20,000. The Municipality has thus made a good bargain. Government now suggested that the Municipality should recognise its responsibilities and proposed to retransfer the existing Contagious Diseases Hospital, sanctioning an annual payment to the Municipality equivalent to the charges incurred in the past on this and on the Municipal Plague Hospital, together with a contribution towards new buildings. The Resolution was therefore modified and carried in the following form: "That a Committee be appointed by the Local Government to select a site and submit plans for a Contagious Diseases Hospital in the City of Rangoon; and that the provision of funds be forthwith discussed by the Local Government with the Rangoon Municipal Committee."

At the third meeting on the 19th of April the Habitual Offenders' Restriction Bill was passed.

In the general discussion of the Budget the Hon. Mr. Goodliffe urged that some portion of the provincial balance should be utilised for the construction of a Contagious Diseases Hospital and for carrying out the recommendations of the Stock-breeding Committee. The Hon. Mr. Lim Chin Tsong referred to the high degree of criminality in the province as shown in successive Administrative Reports and suggested

measures for its reduction. On the assumption that crime would be found on investigation to be most frequent in the interval between harvest and the next year's sowing, he recommended employment of villagers in the construction of roads and the re-afforestation of tracts cleared of timber to be used for fuel. The Hon. Maung Po Tha criticised the Government's control of rice, recommended the extension to Lower Burma of the authority of the Thathanabaing, or Archbishop of Upper Burma, and the provision of water hydrants free of water tax in the numerous monasteries of Rangoon. The Hon. Maung Nyun pressed for legislation conferring on Buddhists the power of making wills, the extension of popular control in municipalities and further restrictions on the traffic in liquor and drugs. The Hon. Mr. Holberton sympathised with the difficulties of the Revenue Secretary in choosing amongst the various objects that clamoured for financial aid those most deserving of assistance with the limited funds available. He criticised rice control, urged a revision of the Provincial Settlement which should give relief to Burma, by the transference, for example, of the cost of the Military Police, an essentially military force, to the Imperial Exchequer and the retention by Burma of the capitation tax. He recommended larger representation for the European commercial community on the Provincial Council under the Reform Scheme and larger representation for the province on the Imperial Council. In a brief speech commenting on the reduction of educational expenditure in the Budget the Hon. Mr. Jamal made the astonishing statement that Burma was less educated than any other part of India. The Hon. Sir Sao Maung was absent but his speech was read by the officiating Secretary to the Council. He advocated the early completion of the Southern Shan States railway.

The Hon. Mr. Webb in reply to some of the previous speakers pointed out that action with regard to the Thathanabaing must be initiated by the Buddhists themselves. He assured Mr. Holberton that the representation of Burma on the Imperial Council under the Reform Scheme was receiving the attention of the Local Government.

The Hon. Mr. Tonkinson pointed out that before Government could decide to remove questions of succession and inheritance from the purview of Buddhist law there must be some assurance of unanimity on the part of the Buddhist community. The establishment of popular control in municipalities was being considered and the necessary measures would be taken as speedily as possible. The free supply of water to Buddhist monasteries was a matter which might very reasonably receive the attention of the supporters of those institutions who should pay the water-rate.

The Hon. Mr. Keith defended Government's policy with regard to rice, pointing out that if Burma had been left outside the control she might very easily have found herself without shipping to move her rice and so have lost her market altogether. He reminded the Council that the proposals with regard to Capitation tax and the Military police formed part of a scheme for financial readjustment already submitted to the Government of India. He explained and

defended the policy of Government with regard to liquor and drugs : he criticised the thesis of the Hon. Mr. Lim Chin Tsong that lack of employment in the cold season was a main source of crime and showed the prohibitive cost of the suggested remedy.

His Honour the President in his closing speech described the efforts made by Burma during the war to assist the Empire with money and men. He corrected certain misapprehensions which had become evident on the question of the Government's policy in the matter of rice control. The large sums of money which were required to carry out a comprehensive plan of road-making would, he hoped, be made available by the proposed revision of the Provincial Settlement. The scheme for an Agricultural College would shortly be put into operation, the organisation of a Department of Industries had been taken in hand, and tanning, paper manufacture, pine tapping for turpentine and other industries depending on the forests were being encouraged. The University scheme, including Draft Bill, First Statutes and First Regulations, was now before the Government, while primary education had been stimulated by the creation of two new Inspectors' circles and the appointment of thirty new sub-inspectors. An investigation into the causes of crime was proceeding, the reorganisation of the Provincial and Subordinate Civil Services had been taken up and proposals for local self-government were nearing fruition. His Honour then reviewed the course of the discussion and controversies that had proceeded in the press on the tentative scheme of Reforms

for Burma and removed a number of misapprehensions. He criticised the demand for immediate control over public affairs as ignoring the whole principle of his scheme which was a scheme of training in all branches of public work, local and provincial. His Honour closed his speech with a reference to the disturbances in India from which Burma had been fortunately free, justified the Rowlatt Acts and severely censured the action taken by Mr. Gandhi.

The fourth meeting was held on the 21st of August. The Burma Town Amendment Bill, to confer on towns powers to make rules for the suppression or prevention of cattle disease and to make rules regulating pawnshops, was introduced by the Hon. Mr. Webb and referred to a select committee.

The Hon. Mr. Webb then introduced the **Rangoon Development Trust Bill**. The Bill provides for the creation of a Trust to take over the work of reclamation, schemes for Rangoon under the Burma Town Planning Bill, the management of the Government Estate in Rangoon and the administration of the Town Lands Reclamation funds. The Rangoon Municipality, which is relieved of considerable responsibilities, will contribute one lakh per annum, and additional revenue will be raised by a tax on passengers leaving Rangoon by sea, contributions from owners of property improved, and a stamp duty on instruments of sale or gift of immoveable property in Rangoon. The Bill was referred to a Select Committee and the Council then adjourned *sine die*.

Constitutional Reform.

On August 20th, 1917, the Right Hon'ble E. S. Montagu, His Majesty's Secretary of State for India, made the following announcement in the House of Commons:—

“The policy of His Majesty's Government, with which the Government of India are in complete accord, is that of the increasing association of Indians in every branch of the Administration, and the gradual development of self-governing institutions with a view to the progressive realisation of responsible government in India as an integral part of the British Empire. They have decided that substantial steps in this direction shall be taken as soon as possible and that it is of the highest importance as a preliminary to considering what these steps should be, that there should be a free and informal exchange of opinion between those in authority at home and in India. His Majesty's Government have accordingly decided, with

His Majesty's approval, that I should accept the Viceroy's invitation to proceed to India to discuss these matters with the Viceroy and the Government of India, to consider with the Viceroy the views of local Governments, and to receive with him the suggestions of representative bodies and others. I would add that progress in this policy can only be achieved by successive stages. The British Government and the Government of India on whom the responsibility lies for the welfare and advancement of the Indian peoples, must be judges of the time and measure of each advance, and they must be guided by the co-operation received from those upon whom new opportunities of service will thus be conferred, and by the extent to which it is found that confidence can be reposed in their sense of responsibility. Ample opportunity will be afforded for public discussion of the proposals, which will be submitted in due course to Parliament.”

THE MONTAGU-CHELMSFORD REPORT.

In accordance with the policy outlined in that statement, Mr. Montagu visited India in the cold weather of 1917-18 and in July of the latter year there was published the Report on Indian Constitutional Reforms which had been signed by the Secretary of State and the Viceroy on 22nd April. The proposals set forth in that report are really the application to practical conditions of four general propositions. For the sake of clearness, these propositions may be set out thus—

I.—There should be, as far as possible, complete popular control in local bodies, and the largest possible independence for them of outside control.

II.—The provinces are the domain in which the earliest steps towards the progressive realisation of responsible Government should be taken. Some measure of responsibility should be given at once, and our aim is to give complete responsibility as soon as conditions admit. This involves at once giving the provinces the largest measure of independence, legislative, administrative and financial, of the Government of India which is compatible with the due discharge by the latter of its own responsibilities.

III.—The Government of India must remain wholly responsible to Parliament, and saving such responsibility its authority in essential matters must remain indisputable, pending experience of the effect of the changes now to be introduced in the provinces. In the meantime the Indian Legislative Council should be enlarged, and made more representative, and its opportunities of influencing Government increased.

IV.—In proportion as the foregoing changes take effect, the control of Parliament and the Secretary of State over the Government of India and Provincial Government must be relaxed.

What has been done by the proposals may be summarised in the words of those who drew them up.

What we have done is to afford Indians a fair share in the Government of the entire country, while providing in the provinces the means for them to attain the stage of responsible government, to which the beginning of responsibility for the Government of India itself must be the sequel.

The Proposals.

Local self-government does not really fall within the scope of these proposals at all, since the aim of Government is to place the institutions connected with it entirely under popular control. As is universally recognised, the growth of local self-government is intimately connected with educational extension and educational reform. It is part of the contemplated political advance that the direction of Indian education should be increasingly transferred to Indian hands. Progress all along the line must depend upon the growth of electorates and the intelligent exercise of their powers; and men will be immensely helped to become competent electors by acquiring such education as will enable them to judge of candidates for their votes, and of the business done in the Councils. The reformed Councils contemplated in this Report will be in a position to take up and carry forward boldly proposals for advance along the lines both of local self-government and of education.

Provincial Governments.—The object of the proposals is the progressive realisation of responsible government. Responsible government implies two conditions, first, that the members of the executive government should be responsible to their constituents, and secondly that these constituents should exercise their power through the agency of their represen-

tatives in the Assembly. These two conditions entail first, that there exist constituencies based on a franchise broad enough to represent the interests of the population generally, and capable of selecting representatives intelligently; secondly, that there is recognised the constitutional practice that the executive government cannot retain office unless it commands the support of a majority in the Assembly. In India, these conditions are not realised. There must be a period of political education which can only be achieved through the gradually expanding exercise of responsibility. Practical considerations, such as those outlined in paragraph 9, make the immediate handing over of complete responsibility impossible. Accordingly, the principle is adopted of transferring responsibility for certain functions of Government while reserving control over others, *while at the same time establishing substantial provincial autonomy.*

Financial Devolution.—Since substantial provincial autonomy is to be a reality, the provinces must not be dependent on the Indian Government for the means of provincial development. The general idea of these proposals on this matter is that an estimate should first be made of the scale of expenditure required for the upkeep and development of the services which clearly appertain to the Indian sphere: that resources with which to meet this expenditure should be secured to the Indian Government; and that all other revenues should then be handed over to the provincial Governments which will thenceforth be held wholly responsible for the development of all provincial services. The principal change in detail will be the abolition of divided heads of revenue. Indian and provincial heads of revenue are to be retained as at present: but to the former income tax and general stamps are to be added, and to the latter land revenue, irrigation, excise and judicial stamps. It follows that expenditure on famine relief and the protective irrigation works will fall upon the provinces, though in the matter of famine relief, the Indian Government could never wholly renounce responsibility in the case of any failure on the part of the provinces.

This arrangement will leave the Government of India with a large deficit. In order to supplement this, it is proposed to assess the contribution from each province to the Government of India as a percentage of the difference between the gross provincial revenue and the gross provincial expenditure.

On the basis of the figures taken by the framers of the proposals this percentage works out at the figure of 87, and would constitute the first charge upon the provincial revenues. The figure may be open to revision hereafter, but not subject to change for a period of, say, six years. And in the event of sudden emergency it must be open for the Central Government to make a special supplementary levy upon the provinces.

Provincial Taxation.—It is proposed that a schedule of taxation should be drawn up in consultation between the Government of India and the provincial Governments. In this schedule certain subjects of taxation are

to be reserved for the provinces, the residuary powers being retained with the Government of India. A tax falling within the schedule would not require the Government of India's previous sanction to the legislation required for its imposition, but the Bill should be forwarded to the Government of India in sufficient time for the latter to satisfy itself that the Bill is not open to objection as trenching upon the Central Government's field.

Provincial Borrowing.—In order to avoid harmful competition, it is recommended that Provincial Governments continue to do their borrowing through the Government of India. But if the Government of India find itself unable to raise the money in any one year which a province requires, or if there is good reason to believe that a provincial project would attract money not to be elicited by a Government of India loan, it is proposed that the Provincial Government might have recourse to the Indian market.

While the above proposals will give Provincial Governments the liberty of financial action which is indispensable, these Governments must also be secured against unnecessary interference by the Government of India in the spheres of legislative and administrative business. Accordingly, while the Government of India is to retain a general overriding power of legislation, for the general protection of all the interests for which it is responsible, the provincial legislatures are to exercise the sole legislative power in the spheres marked off for provincial legislative control. It is suggested that it might be recognised as a matter of constitutional practice that the Central Government will not interfere with the operations of the provincial legislatures unless the interests for which it is itself responsible are directly affected.

Executive Government in the Provinces.

In all the provinces, there is to be collective administration, the system of a Governor in Council. At the head of the Executive will be the Governor, with an Executive Council of two members, one Englishman and one Indian, both nominated by the Governor. Associated with the Executive Council as part of the Government will be one or more Ministers chosen by the Governor from among the elected members of the Legislative Council and holding office for the life of the Council.

We have seen that complete responsibility for the Government cannot be given immediately without inviting a breakdown. Some responsibility must, however, be given at once. Accordingly the plan is adopted of making a division of the functions of the Provincial Government, between those which may be made over to popular control and those which for the present must remain in official hands. How the division is to be made is explained in paragraph 23 below. These functions may be called "transferred" and "reserved" respectively. It is proposed that in the Provincial Executive constituted as explained in paragraph 19, the Governor in Council would have charge of the reserved subjects. This would be one part of the Executive. The other part of the

Executive would consist of the Governor and Minister or Ministers and would deal with the "transferred" subjects. As a general rule the Executive would deliberate as a whole although there would necessarily be occasions upon which the Governor would prefer to discuss a particular question with that part of the Government directly responsible. The decision upon a transferred subject and on the supply for it in the provincial budget would be taken after general discussion by the Governor and his Ministers; the decision on a reserved subject would be taken after similar discussion by the Governor and the members of his Executive Council.

Relation of the Governor to his Ministers.—The Ministers would not hold office at the will of the legislature but at the will of their constituents. Their salary while they were in office would be secured to them and not be at the pleasure of the Legislative Council. They, together with the Governor, would form the administration for the transferred subjects. It is not intended that the Governor should, from the first, be bound to accept the decision of his Ministers, because he will himself be generally responsible for the administration. But it is also not intended that he should be in a position to refuse assent at discretion to all his Ministers' proposals. The intention is rather that the Ministers should avail themselves of the Governors' trained advice upon administrative questions, while he on his part would be willing to meet their wishes to the furthest possible extent, in cases where he realises they have the support of popular opinion.

Where the Governor himself has no official experience of Indian conditions he may desire to add one or two **additional members** from among his officials as members without portfolio, for the purpose of consultation and advice. It is proposed that he should be allowed to do this. Also where the press of work is heavy it may be desirable to appoint some members of the Legislative Council to positions analogous to that of Parliamentary Under Secretary in Great Britain, for the purpose of assisting members of the Executive in their departmental duties and of representing them in the Legislative Council.

Provincial Legislatures.

In each province, it is proposed to establish an enlarged Legislative Council, differing in size and composition from province to province, with a substantial elected majority elected by direct election on a broad franchise, with such communal and special representation as may be necessary. The breadth of the franchise is all-important: it is the arch upon which the edifice of self-government must be raised. The exact composition of the Council in each province will be determined by the Secretary of State in Council on the recommendation of the Government of India, as a result of an investigation into subjects connected with the franchise, the constituencies and the nominated element. It is proposed that this investigation should be undertaken by a Committee consisting of a Chairman chosen from outside India, two experienced officials and two Indians of high

standing and repute. The Committee would visit each province in turn in order to investigate local conditions, and in each province one civilian officer and one Indian appointed by the provincial Government would join and assist it with their local knowledge.

It is proposed that the **communal electorates** though constituting an obstacle to the realisation of responsible government, should be retained for the Muhammadan community. Communal electorates are to be extended to the Sikhs, now everywhere in a minority and virtually unrepresented. For the representation of other minorities, nomination is proposed.

The exact number of **official members** will be for the Committee mentioned in paragraph 23 above, to consider. Members of the Executive Council should be *ex-officio* members of the Legislative Council, and there should be enough official members to provide the Government with first-hand knowledge of the matters likely to be discussed both in Council and in Committee. It is suggested that a convention might be established that official members should refrain from voting upon transferred subjects.

It is proposed that to each department or group of departments whether under a Minister or under a member of the Executive Council there should be attached a **Standing Committee** elected by the Legislative Council from among their own members. The functions of the Standing Committee would be advisory: they should see, discuss, and record their opinion upon, all questions of policy, all new schemes involving expenditure above a fixed limit and all annual reports upon the working of the departments. The member or Minister in charge of the departments concerned should preside.

Effect of Resolutions.—It is not proposed that resolutions, whether on reserved or transferred subjects should be binding; but the Council will influence the conduct of all reserved subjects and effectively control the policy in all transferred subjects. If a member of the Legislative Council wishes Government to be constrained to act in a certain way, it will often be open to him to bring in a Bill to effect his purpose; and when Ministers become, as it is intended that they should, accountable to the Legislative Council, the Council will have full means of controlling their administration by refusing their supplies or by carrying votes of censure. Subject to the sanction of the Governor, the Council will have the power of modifying the rules of business; all members will have the right of asking supplementary questions.

Divisions of Functions of Government.

—It being assumed that the entire field of provincial administration is marked off from that of the Government of India it is suggested that in each province certain definite subjects should be transferred for the purpose of administration by Ministers. All subjects not so transferred would remain in the hands of the Governor in Council. The list of transferred subjects would vary from province to province, and would naturally be susceptible to modification at subsequent stages. It is suggested that the work of division be done by a Committee similar in composition to the one described in paragraph

23 above, with which it would work in close co-operation, since the extent to which the responsibility can be transferred is related to the nature and extent of the provincial electorates. Having first marked off the field of provincial administration the Committee would proceed to determine which of the provincial subjects could be transferred. Their guiding principles should be to include in the transferred list those departments which afford most opportunity for local knowledge and social service, those in which Indians have shown themselves to be keenly interested, those which stand in most need of development. Such is the process of division. The Departments naturally lending themselves to classification as transferred subjects are taxation for provincial purposes, local self-government : education : public works : agriculture : excise and local industries.

In cases where it is subsequently open to doubt in which category a subject falls the matter should be considered by the entire Government but the final decision should lie definitely with the Governor.

In cases of matters made over to non-official control, there should in emergency be the possibility of re-entry either to the official executive government of the province or to the Government of India.

Affirmative Power of Legislation.—Assuming that the Legislative Councils have been reconstituted with elective majorities, and that the reserved and transferred subjects have been duly demarcated, we have now to consider how the executive government is to secure the passage of such legislation as it considers necessary for carrying on its business. The King's Government must go on. The process to be followed is this. For the purpose of enabling the provincial Government to carry legislation on reserved subjects it is proposed that the Head of the government should have power to certify that a particular bill is "essential to the discharge of his responsibility for the peace or tranquillity of the province or of any part thereof, or for the discharge of his responsibility for the reserved subjects." Such a certificate would not be given without strong reason and the Council might by a majority vote request the Governor to refer to the Government of India, whose decision would be final. If no reference was made, or if the Government of India decided that the Bill was properly certificated, the Bill would then be automatically referred to a Grand Committee of the Legislative Council.

The **Grand Committee** in every Council would comprise 40 to 50 per cent. of its strength and would be chosen for each Bill, partly by ballot and partly by nomination. The Governor would have power to nominate a bare majority exclusive of himself, and of the members so nominated, not more than two-thirds should be officials. The elected members would be elected *ad hoc* by the elected members of Council. The Bill would be debated in Grand Committee, and if passed by that body, would be reported to the whole Council, which might discuss but could not reject or amend it except on the motion of a member of the Executive Council. The Gover-

nor would appoint a time limit within which a Bill might be debated, and after the expiry of the time limit the Bill would pass automatically. If the Bill were not passed by the Grand Committee it would drop.

Should a Bill on a transferred subject trespass on the reserved field of legislation, it should be open to a member of the Executive Council to challenge the whole Bill or any clause of it on its first introduction, or any amendment as soon as such amendment is moved, on the ground of infringement of the reserved sphere. The Bill, clause, or amendment would be then referred to the Governor, who might allow it to proceed or certify it, in accordance with the procedure of paragraph 31 (above).

The Governor of a Province should have **power to dissolve** the Legislative Council.

The **assent** of the Governor, the Governor-General, and the Crown, through the Secretary of State, will remain necessary for all provincial legislation, whether certified or not.

It is suggested that **budget procedure** be as follows: The provincial budget should be framed by the executive government as a whole. The first charge upon the provincial revenues will be the contribution to the Government of India. Next will come the supply for the reserved subjects. So far as the transferred subjects are concerned, the allocation of supply will be decided by the Ministers; and if the revenue available is insufficient for their needs, the question of additional taxation will be decided by the Governor and the Ministers. The budget will then be laid before the Council, which will discuss it and vote by resolution. The budget would be altered in accordance with the resolutions of the Council except in the following case. If the Council reject or modify the allotment of reserved subjects, it would be in the Governor's power to certify its necessity, in the terms mentioned in paragraph 31 (above) and to insist upon the retention of the allotment which he declares essential for the discharge of his own responsibilities.

Safeguards.

A great safeguard to the working of the system is the proposal that a periodic Commission shall review proceedings. Both the Government on one hand and the Legislative Council on the other, will decide their course of action in the knowledge that their conduct will in due course come under review by a Commission. Before this Commission there will be an opportunity of arguing, on the one hand, that the reserved subjects have been extravagantly administered, or that the Governor in Council has unnecessarily disregarded the wishes of the Legislative Council, or on the other hand, that the attitude of the Legislative Council with regard to expenditure upon reserved subjects has been so unreasonable as to make it unsafe to transfer further powers.

It is suggested that ten years after the meeting of the new Councils, a **Commission** should be appointed to review the whole working of these institutions in order to determine whether it would be possible to improve in any way the existing machinery or to advance further toward

the goal of complete responsible government in any province or provinces. This Commission should be authoritative, deriving its authority from Parliament itself; and the names of the commissioners should be submitted by the Secretary of State to both Houses for approval. The functions of the Commission will, indeed, be of the utmost importance: it will represent a revival of the process by which the affairs of India were subjected to periodical examination by investigating bodies appointed with the approval of Parliament. It is proposed that the further course of constitutional development in the country shall be investigated at intervals of twelve years.

The Commission should also consider the progress made in admitting Indians to the higher ranks of the Public Service: the adjustment of the financial burden between the provinces: the development of education: the working of local self-government: the constitution of electorates: the working of the franchise: and similar matters.

Development in the Provinces.—The proposal is that as the popular element of the Government acquires strength and experience, subjects will be taken from the reserved list, and placed upon the transferred list until at length the reserved subjects disappear and the goal of complete responsibility is attained. It is suggested that after five years from the first meeting of the new Councils, the Government of India should hear applications from the provincial Governments or the provincial council for the modification of the reserved and transferred lists of the province; and that after hearing the evidence they should recommend to the Secretary of State such changes as may seem desirable.

It is desirable also to complete the responsibility of Ministers for the transferred subjects. It should be open for the Government of India when hearing such applications, to direct that the Minister's salaries, instead of being secured to them for their period of office should be specifically voted year by year by the Legislative Council: and it should be open to the Legislative Council to demand a resolution that Minister's salaries should be so voted. This would result in the Ministers becoming Ministers in the Parliamentary sense, dependent upon a majority in the legislature.

Government of India.

The general idea of the proposals is to create an enlarged Legislative Assembly with an elected majority: to reserve to the decision of a new Council of State, in which Government will have a bare majority, only those measures which it must retain power to carry in discharge of its continued responsibility for the good government of the land: to restrict the official *bloc* to the smallest dimensions compatible with same principles: to institute a Privy Council: and to admit a second Indian Member into the innermost counsels of the Indian Government.

Pending the development of responsible government in the provinces, the Government of India must remain responsible only to Parliament, and saving that responsibility, must retain

indisputable power in matters which it judges to be essential to the fulfilment of its obligations for the maintenance of peace, order and good government.

The Executive Council.—It is recommended that the existing statutory restrictions in respect of the appointment of members should be abolished to give greater elasticity in the size of the government and the distribution of work.

It is recommended that another Indian member be appointed as soon as may be.

The Legislature.—It is proposed that the strength of the Legislative Council to be known henceforth as the Legislative Assembly of India, should be raised to a total strength of about 100 members. Two-thirds of this total should be returned by election: one-third to be nominated by the Governor-General and of this third not less than a third again should be non-officials representing minorities or special interests, such as European and Indian commerce, and the large landlords. The normal duration of an Assembly to be three years.

Electorates and constituencies for the Indian Legislative Assembly should be determined by the same Committee entrusted with the investigation of electorates and constituencies for the provincial Councils.

The power of **nomination of non-official members** is to be regarded as a reserve in the hands of the Governor-General enabling him to adjust inequalities and supplement defects in representation. Nominations should not be made until the results of the elections are known and should be made after informal consultation with the Heads of Provinces.

The maximum number of **nominated officials** will be two-ninths and it will rest with the Governor-General to determine whether he requires to appoint up to the maximum. Official members of the Assembly other than members of the Executive Government, should be allowed a free right of speech and vote except when Government decides their support is necessary.

Special Appointments.—Members of the Assembly, not necessarily elected or non-official, may be appointed to positions analogous to those of Parliamentary Under Secretaries in England. The President of the Legislative Assembly should be nominated by the Governor-General.

Affirmative Power of Legislation.—During the transitional period, the capacity of the Government of India to obtain its will in essential matters necessary for the good government of the land is to be secured by the creation of a second chamber known as the Council of State, which shall take its part in ordinary legislative business and shall be the final legislative authority in matters which the Government regards as essential. The object is to make assent by both bodies, the normal condition of legislation; but to establish the principle that in the case of legislation certified by the Governor-General as essential to the interests of peace, order and good government, the will of the Council of State should prevail.

The **Council of State** will be composed of 50 members exclusive of the Governor-General who would be President. Not more than 25 members including the members of the Executive Council would be officials, and four would be non-officials nominated by the Governor-General. There would be 21 elected members returned by non-official members of the provincial legislative councils, each council returning two members with the exception of Burma, the Central Provinces and Assam which would return one member each. The remaining 6 elected members are to supplement the representation of the Muhammadans and the landed classes and to provide for the representation of the Chambers of Commerce. The Council of State is to possess a senatorial character and the qualifications of candidates for election should be so framed as to secure men of the status and position worthy of the dignity of a revising chamber. Five years would be the normal duration of a Council of State.

Legislative Procedure.

Ordinarily a Government Bill will be introduced into the Legislative Assembly and after being carried through the usual stages it would go to the Council of State. If there amended in a way which the Assembly is not willing to accept, it would be referred to a joint session of both houses by whose decision its fate would be decided. But if the amendments introduced by the Council of State were in the view of Government essential to the purpose for which the Bill was originally introduced, the Governor-General in Council would certify them to be essential to the interest of peace, order or good government. The Assembly would then have no power to reject or modify the amendments nor would they be open to revision by a joint session.

A **private Member's Bill** would be introduced into whichever of the two houses the mover sat, and after passing through the usual stages, would be taken to the other chamber and carried through that. In the case of a difference of opinion, the Bill would be submitted to a joint session, by which its final fate would be determined. But if the Governor-General in Council were prepared to give a certificate in the terms already stated that the form of the Bill was prejudicial to peace, order, and good government, the Bill would go, or go back, to the Council of State and only become law in the form there finally given to it.

The general principles of the legislative procedure proposed are that in the case of all save certificated legislation, the will of the non-official members of both chambers taken together should prevail, while in the case of certificated legislation, the Council of State should be the final authority.

Power of Dissolution, etc.—The Governor-General should have power at any time to dissolve the Legislative Assembly, the Council of State or both bodies. The Governor-General and the Secretary of State naturally retain their existing powers of assent, reservation and disallowance to all Acts of the Indian legislature.

Fiscal legislation will be subject to the procedure recommended in respect of Govern-

ment Bills. The budget will be introduced into the Assembly, but the Assembly will not vote it. Resolutions upon budget matters and upon all other questions whether moved in the Assembly or in the Council of State will continue to be advisory in character.

Standing Committees, drawn jointly from the Assembly and from the Council of State, should play, so far as possible under the circumstances, a similar part to that suggested in the case of the Standing Committees in the provincial legislatures.

Any member of either House might be entitled to ask **supplementary questions**. The Governor-General should not disallow a question on the ground that it cannot be answered consistently with the public interest, but power is still to be retained to disallow a question on the ground that the putting of it is inconsistent with the public interest.

His Majesty may be asked to be pleased to approve the institution of a **Privy Council in India**. Appointments to be made by His Majesty for life; and such appointments to be confined to those, whether officials or non-officials, from British India and from the Native States, who had won real distinction or occupied the higher offices. The Privy Council's office would be to advise the Governor-General when he saw fit to consult it on matters of policy and administration.

Future Progress.—Equally with the Provincial Machinery the Central Machinery will be subjected to periodical revision by the Commission approved by Parliament.

The India Office.

Since His Majesty's Government have declared their policy of developing responsible institutions in India, Parliament must be asked to set certain bounds to its own responsibility for the internal administration of the country.

In transferred matters.—It should be laid down broadly that in respect of all matters in which responsibility is entrusted to representative bodies in India, Parliament must be prepared to forego the exercise of its own powers of control, and this process must continue as responsibility in the provinces, and eventually in the Government of India itself, gradually develops. Parliament cannot retain the control of matters which it has deliberately delegated to representative bodies in India.

In reserved matters.—While in reserved subjects there cannot be any abandonment by Parliament of ultimate powers of control, there should be such delegation of financial and administrative authority as will leave the Government of India free, and enable them to leave the Provincial Governments free to work with the expedition that is desirable. A wider discretion should be left to the Governor-General in Council; and certain matters now referred home for sanction might in future merely be referred to the Secretary of State for information. It is hoped that Parliament will authorise the Secretary of State to divest himself of the control over the Government of India in certain matters even though these continue to be the concern of official governments.

A Committee should be appointed forthwith to reconsider the **organization of the India Office**, with a view to providing for the material alteration of functions involved by these proposals and for the more rapid discharge of its business.

The **Secretary of State's salary** should be defrayed from home revenues and voted annually. This would enable any live questions of Indian administration to be discussed by the House of Commons in Committee of Supply.

In order to provide for informed criticism and discussion of questions connected with India, it is proposed that the House of Commons should be asked to appoint a **Select Committee on Indian affairs**. It would inform itself upon Indian questions, and report to the House before the annual debate on the Indian estimates. By means of interrogations of the Secretary of State and requisitions for papers, the members of the Committee would keep themselves referred on their Indian affairs and to them Indian Bills might be informed upon second reading.

The Native States.

In view of the fact that the contemplated constitutional changes in British India may react in an important manner on the Native States, it is necessary to assure the Princes, in the fullest and freest manner, that no constitutional changes which may take place will impair the rights, dignities and privileges secured to them by treaties, sanads and engagements, or by established practice. Further, all important States should be placed in direct communication with the Central Government as an aid to good understanding and the speedy conduct of business.

It is recommended that a **Council of Princes** be called into existence as a permanent consultative body, ordinarily meeting once a year to discuss agenda approved by the Viceroy, who should be President. The opinion of such a body would be of the utmost value upon questions affecting the States generally or British India and the States in common.

The Council of Princes should be invited annually to appoint a small Standing Committee to which the Viceroy or the Political Department might refer matters of custom and usage affecting the States.

Commissions of Enquiry.—Should dispute arise between two or more States, or between a State and Government, the Viceroy might appoint a Commission of enquiry to report upon the matter in dispute. Such a Commission might be composed of a judicial officer of rank not less than a High Court Judge, and one nominee of each of the parties concerned.

In the case of misconduct, matters might be referred by the Viceroy to a Commission appointed to advise him. Such a Commission should ordinarily consist of five members including a High Court Judge, and two Ruling Princes.

Joint Deliberations.—With the establishment of a Council of Princes, of a Council of State, and of a Privy Council, the machinery will exist for bringing the senatorial

institutions of British India more closely into touch with Rulers of the Native States. The Viceroy, when he thought fit, might arrange for joint deliberation and discussion between the Council of State and the Council of Princes, and might invite members of the Council of Princes to serve on Committees of the Privy Council.

The Public Services.

The policy of the increasing association of Indians in every branch of the administration was placed in the forefront of the announcement of August 20. The characteristics which have enabled the services to confer benefits upon India in the past, must be adequately maintained in the future; and the solution lies in recruiting year by year such a number of Indians as the existing members of the services will be able to train in an adequate manner and inspire with the spirit of the whole.

Appointments are to be made to all branches of the Public Service without racial distinction.

For all public services, for which there is a system of recruitment in England open to Indians and Europeans alike, there must be a system of appointment in India.

The Civil Service.—It is suggested that thirty-three per cent. of the superior posts should be recruited for in India, and that this percentage should be increased by one and a half per cent. annually, until the periodic commission is appointed which will re-examine the whole subject. A re-adjustment of the rates of pay and pension is recommended.

There should be a fixed percentage increasing annually of recruitment in India. This percentage will not be uniform for all Services as the particular figures must depend upon their distinctive characteristics and functions. As in the case of the Civil Service, a re-adjustment of the rates of pay and pension is recommended.

The granting of a considerable number of **King's Commissions** to Indians is recommended. Race should no more constitute a bar to promotions in the Army than it does in the Civil Service.

Industries and Tariffs.

The proposals lay stress upon the necessity for Government action in developing the resources of the country, and for the recognition by Government of the necessity for a forward industrial policy. The extent and form of State assistance will doubtless be determined by the reformed Governments of the future, having the advice of the Industrial Commission before them, and with due reference to Imperial interests.

Concluding Note.

The general principle kept in mind in framing these proposals has been the progressive realisation of responsible government. The arrangements contemplated by these proposals are admittedly transitional. They are to be open to revision. The proposals themselves are tentative. They are now open to discussion.

GOVERNMENT OF INDIA'S DESPATCH.

A number of despatches and reports dealing with the Reform Scheme were published in 1919, of which the first was a despatch by the Government of India, dated March 5, 1919.

That despatch opens with a description of the reception of the Report in India, dealing in turn with the views of Indians, non-official Europeans, officials and local Governments. Different types of Government are then considered. It is shown that no type of unified Government which would comply with the announcement of August 20, 1917, is practicable in present circumstances. All local Governments except two declared for a unified system and a majority of the Heads of Provinces who met at Delhi in January 1919 embodied their proposals in a joint minute. These proposals are considered at length and reasons given for rejecting them. The Government of India then declare themselves definitely in favour of a dual system, modified in certain respects.

The main features of the structure of the **Provincial Executive** proposed in the Report are accepted, save that it is suggested that there should be no members without portfolios and that in cases where a Governor lacks Indian experience the council should include two official members. The Government of India understand that Heads of Provinces other than the presidencies will for the present be drawn from the services and they would provide by statute for the appointment of one official and one Indian member of council. Ministers should be appointed from the elected members of, and should be amenable from the outset to, the provincial legislature. Their number and pay should be fixed by the Governor in consultation with the prospective ministers and placed on the transferred estimates.

It is recommended that the main rights and duties of the **Public Services** in India should be reduced to statutory form, and proposals be submitted as a basis for the necessary law. Classification of the services into Indian, provincial, and subordinate divisions is recommended, the chief criterion being the appointing authority. No option of serving under ministers and no general offer of proportionate pensions are recommended, but the task of protecting the services is laid definitely upon the Governor: in extreme cases officers should be entitled to apply for proportionate pensions. Officers having duties in both reserved and transferred departments should, for purposes of posting, promotion and discipline, be under the control of that part of the Government which is concerned with the budget head from which their pay is met. Provision should be made in the Bill for the establishment of a Public Services Commission.

The **Financial Proposals** involve two important variations from the Report Scheme. In the first place, it is proposed to aim at a more equitable division among the provinces of the burden of Imperial finance. While the proposals in the Report are accepted as a basis for the initial provincial contributions to the Central Government, it is proposed that a

committee on Financial Relations be appointed to fix a fairer scale of contributions for the future, and to advise how it can be reached.

In the second place, the Report proposal whereby the revenues of the provincial Governments will be treated as a whole and the amount to be allotted to each half of the Government will be decided yearly at budget time after consultation between the executive council and ministers is rejected. It is held that this system (1) renders impossible the regulation of overdrafts on balances, taxation and borrowing, (2) gives to each half of Government an indefensible power of interference with the other half, (3) will be productive of unnecessary friction, and (4) offers no incentive to either half to develop its own resources. In its place the system of the separate purse is proposed, under which each half of the Government will be given a share of the provincial balances, the receipts from its own heads of revenue and a share of the estimated normal surplus, and any adjustments which require to be made so as to provide for the needs of either part of the Government will be made by the grant either of a fraction of some head of revenue or of a growing allotment in cash. The first division of resources would be temporary and thereafter the division would be adjusted periodically. Each half of the Government would be given separate powers of taxation and borrowing, all proposals of this nature being first laid before the whole Government. The budget would be a single one prepared in Finance Department and would be discussed in the legislature but not voted by it. Resolutions would have effect as recommendations only, but if carried against a minister the latter would have to consider whether they involve a vote of want of confidence. There would be a single Finance Department with a Joint Secretary to guard the interests of transferred subjects, and the legislature would be asked to appoint a committee on public accounts to advise it on all surcharges and disallowances of the auditor and all serious departures from budget provisions.

The **Legislative Arrangements** proposed in the Report are generally accepted. The composition of the grand committee is reserved for further consideration and it is recommended that there should be no right of appeal against the Governor's decision in the matter of certification. The proposals regarding the Governor's powers of assent, dissolution, etc., are approved. It is also proposed that the Governor should have power to reserve certain acts for the assent of the Governor General. No provision is thought necessary for the establishment of Upper Houses. It is agreed that the Governor should be President of the legislative council with power to nominate the Vice-President, and in regard to rules of business it is proposed that fundamental rules, affecting the powers of the different elements of the constitution, should be distinguished from standing orders of council, the latter being framed by local Governments and alterable by the council with the sanction of the Governor. The right of asking supplementary ques-

tions should be extended to all members, and official members should have freedom of speech and vote on all subjects except in so far as Government thinks it necessary to give them instructions. The Report proposals regarding the effect of resolutions are accepted, as are also subject to certain conditions those regarding standing committees and council under-secretaries.

It is proposed that **Rules of Business** should be framed to regulate the disposal of cases in transferred subjects. The circumstances in which the Governor will be entitled to intervene in transferred subjects should be defined in the instrument of instructions which should be a published document. If a minister finds himself unable to acquiesce in the action proposed by the Governor, the latter should be empowered to call on him to resign, and, if he is unable to find another minister immediately, to take over the control of the departments concerned. If the Governor is unable within six months to find a minister, he should move the Secretary of State to re-transfer the portfolio to the Governor in Council.

When differences arise as to the disposal of a case affecting a reserved and a transferred department, the Governor should be able to intervene and, if he thinks fit, submit the case for consideration by other members and ministers than those concerned, but the final decision should remain with the department to which the case properly belongs. When it is doubtful to which department a case belongs, the decision should lie with the Governor. Orders of the two parts of the Government should be distinguished so as to make it clear from which side they emanate. Each half of the Government must refrain from opposition to the other half, but should not be expected to give active support to a policy which they have not endorsed.

The proposal to have periodic **Statutory Commissions** is approved, but any intermediate changes before the appointment of the first commission are objected to.

The proposal to have two **Indian Members** on the Governor-General's executive council, the abolition of the statutory restriction on the number of members of the council are accepted; but it is recommended that the appointment of two officials, one lawyer, and two Indians, should be secured by statute. Recommendations in regard to the constitution and powers of the Assembly and the Council of State are reserved pending the consideration of the franchise committee's proposals. It is agreed that the President of the Assembly should be an official nominated by the Governor-General, that powers of assent, reservation and disallowance to all acts of the India legislature should remain as at present, that the existing powers of making regulations and ordinance should be maintained, that the Governor-Generals should have power to return a Bill for reconsideration and to dissolve either the Assembly or the Council of State, and that in the matter of resolutions, questions, rules of business, etc., the Indian legislature should be on the same footing as provincial councils. The establishment of a Privy Council is approved but the proposals to appoint standing committees and council under-secretaries for the Indian legislature are regarded as premature.

The Report proposals regarding the relaxation of the **Control of the Secretary of State and Parliament** and the transfer of the Secretary of State's salary to the Home Estimates are approved, and the proposal to institute a committee of Parliament on Indian affairs is welcomed and the suggestions made that the committee should include members of both Houses. Opinion on the reorganisation of the India Office is reserved pending the report of the India Office committee.

MINUTE BY THE VICEROY.

The despatch has appended to it the following Minute by His Excellency the Viceroy, dated March 5, 1919:—

I feel it right to append a minute to this despatch, not of dissent but by way of personal explanation.

In 1916 my Government forwarded a despatch to the Secretary of State framing an announcement of policy and the first steps to be taken in pursuance of the policy enunciated. The despatch was subjected to criticism—criticism which I accept as sound—that it failed to fix the enlarged Councils with responsibility. A mere increase in numbers it was said did not train Indians in self-government. It did not advance this object unless the Councils were at the same time fixed with some definite powers and with real responsibility for their actions.

It is to my mind evident that such criticism was the genesis of the form of the announcement of policy made by the Secretary of State on behalf of His Majesty's Government on August 20th. That announcement had three outstanding features. First, the progressive

realisation of responsible government is given the keynote and objective of British policy in India; secondly, substantial steps are to be taken at once in this direction; and thirdly, this policy is to be carried out by stages. I think I shall not be stating the basic principle of this policy unfairly when I sum it up as the gradual transfer of responsibility to Indians.

The Secretary of State was deputed by His Majesty's Government to proceed to India to discuss the whole question with myself and my Government, and the results of our discussion are embodied in the Joint Report which we presented to His Majesty's Government.

The Severest Criticism—We took as our terms of reference the announcement of August 20th, and I confidently assert that in the proposals we have made we have not swerved from the terms of that announcement. The progressive realisation of responsible government is the basis of our proposals; substantial steps to be taken at once in this direction are formulated and we have provided through the machinery of the periodic commission for the achievement of the policy announced by successive stages.

We have not overlooked the very grave and real difficulties which lie in the path of the policy proposed. They are set out at length throughout the Report, but especially in the Chapter entitled the Conditions of the Problem, and in my perusal of the criticisms of the Report I have seen no difficulties stated which we have not ourselves emphasised. As regards the proposals themselves no criticism which has been directed against them is more severe than our own statement of the case in paragraph 354 of our Report.

“As we have said already because it (the Report) contemplates transitional arrangements, it is open to the criticisms which can always be effectively directed against all such plans. Hybrid executives, limited responsibility, assemblies partly elected and partly nominated, divisions of functions, reservations, general or particular, are devices that can have no permanent abiding place. They bear on their faces their transitional character; and they can be worked only if it is clearly recognised that that is their justification and their purpose. They cannot be so devised as to be logical. They must be charged with potentialities of friction. Hope of avoiding mischief lies in facing the fact that they are temporary expedients for training purposes, and in providing that the goal is not merely kept in sight, but made attainable, not by agitation but by the operation of machinery inherent in the scheme itself.”

Meaning of Responsibility.—I have quoted this passage to show that the Secretary of State and I did not shut our eyes to the very grave difficulties attendant on our scheme. But to what are these difficulties due? They are not to any perverse ingenuity on the part of the Secretary of State and myself in the framing of our proposals. They are inherent in the principle underlying the announcement to which we were bidden to give effect, *viz.*, the gradual transfer of responsibility to Indians. And I wish here to endeavour to define what I mean by responsibility. There has been much discussion as to what is meant by responsibility, responsibility to constituents, responsibility to legislative councils and the like, and I cannot but think that there has been much talk and writing on this subject which is beside the mark, and perhaps our Report is equally guilty with others in this respect. What are we aiming at in our policy? Surely this, that the decision of certain matters—I will not discuss what matters—shall rest with Indians; that in these matters it will be for them to say “Yes” or “No” and that our scheme shall provide, as far as possible, for everybody knowing that the decision in any particular matter is their decision, that the “Yes” or “No” is their “Yes” or “No”. This definition of the responsibility to be attained by Indians is one to which, I believe, most people will subscribe, and I believe it to be the responsibility at which His Majesty’s Government were aiming when they made their declaration of policy.

It is one thing however to enunciate a principle; it is another thing to translate the principle into practice. The Secretary of State and I have had the task imposed upon us of translating the principle of the gradual transfer of responsibility to Indians into practice. We

explored every road, we followed up every path which seemed to lead to the goal we had in view, but we always came back to this, that if responsible government is to be progressively realised through the gradual transfer of responsibility, as defined above, the only method by which this can be attained is one which involves the division of the functions of government between two different sets of authorities, a method which has been compendiously styled “dyarchy.”

Objections to Unitary System.—In a unitary government, short of a unitary responsible government, you cannot fix responsibility upon Indians. You can associate Indians with the Government, but you cannot fix them with responsibility in the sense that anyone can see at a glance that the decision in any particular case is their decision. Moreover, in a unitary government there is no room for the gradual transfer of responsibility. There is only one step from irresponsibility into the full responsibility which responsible government connotes. By the dyarchic method, however, you can insure full responsibility in certain subjects with machinery to extend that responsibility to other subjects as occasion permits. The division of subjects between the official portion of the Government and the Indian portion of the Government insures that each portion is fixed with responsibility for its actions in the sphere allotted to it. Such a division is full of difficulties as critics of our scheme have not failed to point out, but they are the price which we must be prepared to pay, if we are to translate the principle underlying the announcement of August into practice, and make the transfer gradual.

I think I may bring out in greater relief the broad difference between the schemes of unitary government and dyarchy, if I analyse the scheme propounded by five Heads of Local Governments which is forwarded with the despatch. I welcome the scheme because it is possible from a comparison between it and the scheme of the Report to appreciate the issue between a unitary and a dyarchic government.

In paragraph 3 of the minute it is said “While the announcement of His Majesty’s Government in Parliament rightly placed the association of Indians with the Government in the foreground of the policy, the idea of association has been overshadowed and obscured by the idea of responsibility.”

His Majesty’s Government are the sole judges of what was meant by the announcement of August 20th. I have at the beginning of this minute discussed what I believe to be the genesis of the announcement of August 20th and what I regard as its main features and its underlying principle.

If I am wrong as to these, the foundation of the arguments in the preceding pages disappears, but I will examine the scheme of the Heads of Local Governments on the assumption that I am correct.

Local Governments’ Proposals.—The main features of the scheme may be said to be—

(1) A Council of equal numbers of officials and non-officials, the latter selected from elected members.

- (2) No division of subjects.
- (3) Legislative Council to be as in the joint Report.
- (4) The Governor to have powers to overrule his Executive Council under section 50 of Government of India Act, 1915.
- (5) Legislation to be as in joint Report, Grand Committee to exist, but the Governor to have a free hand in the selection of members nominated for it and Governor to have powers of certification in the terms of section 50 mentioned above.
- (6) Budget to be voted by the Legislative Council, but Governor to have power to restore any item in terms of section 50.

It can, I think, be seen at once that the pith of the scheme lies in the constitution of the Executive and in the non-division of subjects. The other features are either those of the joint Report or modifications of it. Can it be said that in the Unitary Executive as proposed it will be possible to fix the Indian portion of the Executive with responsibility in the sense in which I have used it in this minute, *viz.*, that it will be for them to say "Yes" or "No" in certain matters and that everybody will know that the "Yes" or "No." is their "Yes" or "No." Their position will not be different from that enjoyed by Indian Members of Executive Councils at the present moment, under which the predominance of the British element always shields the Indian Member from any direct responsibility in respect of actions of the Government. He can always point to the majority against him as responsible for the action taken.

Again, on the assumption that "the gradual transfer of responsibility" is the basic principle of the announcement, I believe that under the scheme of the Heads of Local Governments, there can only be one step from a position of irresponsibility to one of full responsibility. Under this scheme advance can only be by an increase of numbers of Indians in the Executive Council and granted that the initial numbers of British and Indians are two and two, an increase of one to the Indians places them in full control. Let me quote from the minute of dissent of Lord Ronaldshay and Sir Edward Gait to the scheme under discussion. "It is true that if the scheme of the joint Report be adopted, there will be continued agitation for an increase in the number of transferred subjects. But under the alternative scheme there will be an equally strong agitation for an increase in the number of non-official Members of the Government; and concession to that agitation would be far more dangerous, as it would involve a sudden transfer of all power from the official to the non-official members, subject to the power vested in the Governor by section 50 of the Government of India Act, which, however, he could exercise only on very special occasions."

The Legislative Councils.—It still remains for me to examine the position of the Legislative Councils under this scheme. The Heads of Local Governments rely on the machinery of the Grand Committee and the use of the certificate to carry their affirmative legislation.

In so far as they find themselves able to use this machinery in the whole domain of government, they will reduce the Councils merely to bodies of irresponsible critics to whom no power is given, in whom no responsibility is fixed, but whose numbers are materially increased. In so far as they do not use the machinery they will reproduce the position of Canada described in the Durham Report—an irremovable executive and an irresponsible but supreme legislature. It might be said that this same argument recoils on my head in respect of our treatment of reserved subjects. But to this objection I would point out that we have advisedly not introduced the principle of responsibility into that sphere, while in the sphere of the transferred subjects the principle has full play.

The potentialities of friction, which are predicted for the dyarchic scheme, will thus, to my mind, be equal if not greater in their proposals and the saving grace of responsibility will find no place.

Once more,—I have seen schemes under which a combination of division of subjects with a unitary executive is proposed. I would ask those who suggest such schemes to test them by the two principles which I understand are basic in the announcement, of fixation of responsibility and of gradual transfer of responsibility. I do not believe they will survive the test. But let me state the problem in another way. The division of subjects is incompatible with Unitary Government. The moment you divide subjects you necessarily divide the Government, otherwise there is no meaning in the division. You divide subjects in order to allocate those which are to be under the control of the Legislative Councils to Members of the Government, who would owe allegiance to the Councils. By division of subjects then you at once introduce dualism into the Government, and have two portions of one Government owing allegiance to different authorities.

Need for Prompt Action.—I have confined myself in this minute to the one point whether or not the advance is to be by way of the gradual transfer of responsibility. This to my mind must be settled before it is profitable to discuss the details of the proposals. I have traced the history of the promulgation of this principle. It is for His Majesty's Government to decide whether I have traced it aright and whether I have correctly interpreted their announcement of August 20th. The idea of responsibility was, as I believe, introduced into that announcement deliberately and I have endeavoured loyally to carry it out in the proposals for which the Secretary of State and I were jointly responsible. I leave it then for the decision of His Majesty's Government, but I earnestly press upon them the imperative necessity of action in fulfilment of their announcement. I agree with the opinion expressed by His Excellency the Governor of Bombay, in a note written to me in connection with the Conference of Heads of Provinces, that "time is a factor of vital importance in the consideration of the whole question of Reforms," "I am convinced," he says, "that delay is a greater danger even than an imperfect scheme, and that those of us on whom must fall the heavy burden

of putting reforms schemes into actual operation will be better able to work an imperfect scheme with the good-will and confidence of all concerned than to operate a more perfect scheme—if one can be devised—when confidence and good-will have been broken and alienated by dis-appointment and delay.”

One last word—The Secretary of State and I asked for publication of our Report because, as we said, “our proposals can only benefit by reasoned criticism both in England and India,

official and non-official alike.” That criticism, so far as India is concerned, has been received and along with my colleagues in the Government of India, I have carefully weighed it. The results of our consideration are embodied in the amendments suggested by us in our despatch. We have not departed from the underlying principle of the Report; and I believe that we have done much to clarify and strengthen the proposals as a practical scheme.

CHELMSFORD.

REPORT ON FRANCHISE.

The Committees on Franchise and Subjects, foreshadowed in the Montagu-Chelmsford report, were duly appointed under the chairmanship of Lord Southborough and their reports were issued in 1919.

The Franchise Committee's Report is summarised as follows:—

Provincial Councils.—The committee recommend the retention of the existing general disqualifications of electors and the addition of a further disqualification based on nationality which would not, however, apply to subjects of Indian States. They decided that the social conditions of India make it premature to extend franchise to women.

It is proposed that the general franchise should be based on residence within the constituency and the possession of certain property qualifications as evidenced by the payment of land revenue, rent or local rates in rural areas, and of municipal rates in urban areas, and of income tax generally. An important exception to these general principles is the recommendation to enfranchise all retired and pensioned officers of the Indian Army. No attempt has been made to arrive at any uniform property qualification. The qualifications proposed vary not only from province to province; but also, in some cases, in different areas within the same province. An important point is that the same qualification is proposed for all communities within the same area.

The number of electors, which the franchise proposed for the various provinces will give, is roughly estimated as follows:—

Madras	542,000
Bombay	653,000
Bengal	1,228,000
United Provinces	1,483,500
Punjab	237,000
Bihar and Orissa	576,000
Central Provinces	159,500
Assam	300,000

It is proposed to replace the existing system of indirect election to the provincial legislative councils by a system of direct election. The district will ordinarily be the electoral unit but in some provinces single cities with large populations and in other provinces smaller towns in groups will form urban constituencies. Single member constituencies are generally recommended but some latitude is left to local

Governments in this matter. The committee are opposed to the introduction of elaborate systems of voting, such as proportional representation, the limited vote and the cumulative vote. They recommend that plural voting should be forbidden except where a constituency returns more than one member in which case each elector will have as many votes as there are members. Electors will also be allowed to vote in one general or communal constituency in addition to voting in a special constituency.

The average number of electors in the general and communal constituencies in the various provinces is estimated to be as follows:—

Madras	7,200
Bombay	8,900
Bengal	16,400
United Provinces	17,700
Punjab	4,900
Bihar and Orissa	9,100
Central Provinces	3,400
Assam	9,700

The size of individual constituencies will, however, vary enormously, from 500 electors in the Muhammadan constituency composed of the towns of Madura, Trichinopoly and Srirangam to 96,000 in the constituency of Almora in the United Provinces.

The size of the council which the Committee recommend for each province is as follows:—

Madras	118
Bombay	111
Bengal	125
United Provinces	118
Punjab	83
Bihar and Orissa	98
Central Provinces	70
Assam	53

In the presidencies and the United Provinces the proportion of elected members proposed is from 78 to 80 per cent. of the total membership, and in the remaining four provinces from 73 to 75 per cent. The proportion of officials proposed is 15 per cent. in the United Provinces, 16 per cent. in the three presidencies and Bihar and Orissa, 17 per cent. in the Central Provinces and Assam and 19 per cent. in the Punjab.

The interests to be represented by nomination are :—

- (i) the depressed classes in all provinces, except the Punjab ;
- (ii) Anglo-Indians in all provinces, except Madras and Bengal, where representation will be by election ;
- (iii) Indian Christians in all provinces, except Madras, where they will have a special electorate, and the Central Provinces ;
- (iv) labour in Bombay, Bengal, Bihar and Orissa and Assam ;
- (v) excluded tracts in Madras and the Central Provinces ;
- (vi) military interests in the Punjab ;
- (vii) industrial interests other than planting and mining ;
- (viii) aborigines and domiciled ;
- (ix) Bengalis, all in Bihar.

The number of nominated non-official members proposed varies from 4 in Bengal and the United Provinces to 9 in Bihar and Orissa and Assam.

Special electorates are proposed for the following interests :—

- (i) universities, in all provinces except Assam ;
- (ii) landholders and
- (iii) commerce and industry, both in all provinces.

The number of landholding members varies from 2 in Assam to 7 in Madras and of representatives of commerce and industry from 2 in the Punjab and the Central Provinces to 15 in Bengal. In the representation of commerce and industry the following special interests share :

- (i) planting in Madras, Bihar and Orissa and Assam ;
- (ii) mining in Bengal, Behar and Orissa and the Central Provinces ;
- (iii) European Chambers of Commerce in Madras, Bombay, Bengal and the United Provinces ;
- (iv) Indian Chambers of Commerce in the same four provinces ;
- (v) Trades' Associations in the three presidencies ;
- (vi) and (viii) Millowners' Association and cotton trade in Bombay ;
- (viii) (ix) (x) and (xi) the jute trade, the tea trade, Indian Associations and Inland Water Transport Board in Bengal ;

(xii) general industrial interests in the Punjab, Bihar and Orissa, Central Provinces and Assam.

The extension of a system of **communal electorates** is proposed in the interests of (1) Indian Christians to whom three seats are given in Madras; (2) Anglo-Indians who are given one seat each in Madras and Bengal; (3) Europeans who are given two seats in Bombay and Bengal

and one seat in Madras, the United Provinces and Bihar and Orissa; and (4) Sikhs to whom eight seats are given in the Punjab. In the case of Muhammadans, the existing system of communal election is retained and following the Congress League agreement the committee propose to give Muslims the following proportion of Indian elected seats :—

	per cent.
Madras	15
Bombay	34
Bengal	40
United Provinces	30
Punjab	50
Bihar and Orissa	25
Central Provinces	14

The claims to separate electorates of the following minor communities are not supported. Mahishyas of Bengal and Assam, Marwaris of Calcutta, Bengali domiciled community of Bihar and Orissa, Ahoms of Assam, Mahars of the Central Provinces, Uriyas of Madras and Parsis of Bombay. The majority of the committee would also reject the claims of the Mahrattas. In regard to non-Brahmans of Madras, the committee observe that they were deprived of the opportunity of examining the non-Brahman leaders and of testing their views since they refused to appear before the committee. The communications from Dr. Nair and other non-Brahman leaders are included in an appendix (XV) to the report. The committee regret that the refusal of these leaders to appear at the enquiry made a settlement by consent impossible. They considered certain solutions of the non-Brahman 'problem'; but in the end decided to make no difference between Brahmans and non-Brahmans; but they add a suggestion that the matter may be further considered hereafter if the non-Brahmans make a move.

Few changes are proposed in regard to the **qualifications of candidates.**

The most important are :—

- (1) the removal of the disqualification of subjects of Indian States.
- (2) the limitation of the disqualifications of dismissal from Government service and imprisonment ;
- (3) the withdrawal of the Governor's power to declare the election of a candidate as contrary to public interests ; and
- (4) the addition of a new qualification of residence within the constituency in the provinces of Bombay, the Punjab and the Central Provinces.

The Indian Legislature.—The committee recommend that the Assembly should have a total strength of 120 members, or including the Governor-General in Council 121. 80 members should be elected, distributed among various provinces as follows :—

Madras	12
Bombay	12
Bengal	13
United Provinces	12

Punjab	9
Bihar and Orissa	9
Central Provinces	5
Assam	3
Burma	4
Delhi	1

Of these 80 members 36 will represent general non-Muslim interests, 19 general Muslim interests, 1 general Sikh interests, 5 non-Muslim landholding interests, 4 Muslim landholding interests, 1 Sikh landholding interest, 6 European commerce and planting and 4 Indian commerce. To these will be added 14 members appointed by nomination and 26 officials. The committee hold that a system of direct election is not feasible, except in the cases of the landholding and commercial interests, and recommend that the general representatives should be returned by the non-official members of the provincial legislative councils voting on a communal basis.

It is proposed that the **Council of State** should consist of 56 members, exclusive of the Governor-General, of whom 24 should be

elected. The 24 elected seats are distributed as follows :—

General	11
Mahomedans	7
Sikhs	1
Landholders	2
European Chamber of Commerce	2
Burma	1

The elected members, with the exception of the two representatives of European, commerce, will be returned by the non-official members of the various provincial councils, the distribution of seats among the provinces being as follows :

Madras	3
Bombay	3
Bengal	3½*
United Provinces	3
Punjab	3
Bihar and Orissa	2½*
Central Provinces	1½†
Assam	1½†

* One landholding seat to be filled alternately from Bengal and Bihar and Orissa.

† One Muhammadan seat to be filled alternately from the Central Provinces and Assam.

GOVERNMENT OF INDIA ON FRANCHISE.

The following is a brief summary of a Government of India despatch of April 23, 1919, giving Government's views on the proposals summarised above :—

The Government of India accept the Committee's recommendations with the following exceptions. They would not admit subjects of Native States as electors or candidates. The object to any franchise qualifications other than those based on property. They would enlarge the electorate proposed for Madras and reduce those for Bengal, United Provinces and Assam, and would reduce size of larger constituencies. They consider provision for representation of backward classes inadequate and propose considerable increase in some provinces. They see no need for special University constituencies and propose to re-examine proposals for landholding constituencies in

Madras, Punjab and Assam, and to re-distribute seats allotted to landholders of United Provinces. They accept proposals for Muslim representation except in Bengal where they would give Muslims 44 seats instead of 34, they propose tentatvely to allot to non-Brahmans 30 out of 61 non-Muslim seats in Madras but without special electorate and consult Bombay Government regarding Mahrattas. They ask for further consideration of distribution of seats between town and country. In regard to Indian Legislature they agree generally as to size of both chambers but criticise the distribution of seats in Assembly with special reference to omission of urban representation and amount of representation proposed for landholders and European and Indian commerce. They would prefer system of direct election to Assembly but are prepared to accept indirect provided elections to Council of State are direct.

DIVISION OF FUNCTIONS.

The following is a summary of the Report of the Committee on Division of Functions :—

The report is in six sections. The important sections are no. II, which deals with provincial functions and relations between the provinces and the Government of India, no. III in which the transfer of functions and the powers of the Governor-in-Council in relation to transferred subjects are discussed, and nos. IV and V in which proposals regarding the Public Services and Finance respectively are put forward. Much of the report does not lend itself readily to summary being of a technical and complicated nature but the main proposals are :—

Section II.—The committee have prepared wo lists showing (i) all-India subjects and (ii)

provincial subjects. Among the most important subjects proposed for inclusion in the all-India list are, naval, military and aerial matters, foreign relations and relations with native states railways (with certain exceptions), communications of military importance, posts and telegraphs, currency and coinage, sources of imperial revenue, law of status, property, civil rights, etc., commerce, shipping and major ports, criminal law, central police organisation and railway police, possession and use of arms, central institutions of scientific and industrial research, ecclesiastic administration and all-India services. In the provincial list the most important items are local self-government, medical administration and education, sanitation, education (with certain exceptions), provincial buildings, communications other

than those of military importance, light and feeder railways in certain cases, irrigation and canals, land revenue administration, agriculture, civil veterinary department, fisheries, co-operative societies, forests, excise, administration of justice, development of industries, police, prisons and reformatories, control of newspapers and presses, provincial borrowing.

The provincial subjects will be divided into reserved and transferred, and it is proposed that the powers of the Government of India in regard to provincial subjects should vary according to this division. The committee recommend that intervention in transferred subjects should be allowed only for two purposes, *viz.*—

(1) To safeguard the administration of all-India subjects.

(2) To decide questions arising between two or more provinces, failing agreement between the provinces concerned:

In respect, however, of certain special subjects they retain a certain power of control in the hands of the Government of India by making the subjects "provincial subject to Indian legislation." In the case of reserved subjects the committee recognise that no specific restrictions can be imposed on the Government of India's general powers of control but feel that the control should vary according as the subjects are administered by provincial governments as agents of the Government of India or as provincial functions properly so called. In respect of the former the Government of India's powers of control must remain absolute, but in regard to the latter they propose to secure that the Governor General in Council shall exercise his power of control with due regard to the purpose of the new Government of India Act.

Effect of the Proposals.—The general effect of the proposals will be to leave the provinces free to legislate on provincial subjects reserved and transferred, which are not specially made subject to Indian legislation, except in cases where the proposed Bills affect powers expressly reserved to the Government of India by statute, or amend any provision of certain specified all-India Acts, or amend any section of an Act which by the terms of the Act itself is specially protected. They also propose that the Governor shall have power to reserve for the consideration of the Governor-General provincial Bills, which appear to him to affect any matter specially committed to his charge, any all-India subject or the interests of any other province, and shall be required similarly to reserve Bills which affect the religion or religious rights and usages of any class, university Bills, Bills shifting boundaries of reserved and transferred subjects, and railway or tramway Bills.

Section III.—The committee preface their discussion of the transfer of subjects with a statement of reservations which accompanied the proposals of local Governments. The Madras Government were wholly opposed to any scheme involving dualism, the Governments of Bombay and the Punjab and the Chief Commissioner of Assam proposed alternative schemes involving no division of functions and the Chief

Commissioner of the Central Provinces desired a period of training before the introduction of the Report scheme. The most important subjects proposed for transfer are local self-government, medical administration and education, sanitation, education (with certain exceptions), provincial buildings, communications other than those of military importance, light and feeder railways and tramways (in certain cases), agriculture, civil veterinary department, fisheries (except in Assam), co-operative societies, forests in Bombay, Excise (except in Assam) subject to certain safeguards, and the development of industries. Mr. Couchman is unable to recommend the transfer of any subject in Madras as he feels that the proposals of the Franchise Committee will result in the return of a large majority of Brahmans, in whose hands the interests of the masses will not be safe.

Intervention of the Government.—The committee recommend that the Governor should be free to intervene in the administration of transferred subjects

(i) in defence of reserved subjects,

(ii) in defence of his special responsibilities under the instrument of instructions.

In cases of the former description if the Governor fails to get departments concerned to agree, he will himself decide the point in issue and will be empowered to call on the minister to resign in cases of necessity. If the case is an emergent one requiring immediate action, the Governor will be able to certify it as such, whereupon the Governor-in-Council will take action. Rules are suggested for regulating the relation between the two portions of the Government and defining the authority of the Governor. The gist of these is (1) each side is not to interfere unduly with the other, (2) the Governor shall decide which side has jurisdiction when that is in doubt, (3) the Governor shall see that all orders of the Governor-General-in-Council are carried out, (4) the Governor shall call joint meetings in cases where reserved and transferred departments are concerned and shall decide in cases of disagreement, (5) the Governor-in-Council can administer a transferred subject in an emergency in the absence of a minister.

In defence of his special responsibilities under the instrument of instructions the Governor should have similar powers. Draft clauses defining the Governor's special responsibilities are included in the report: the matters covered by them are the maintenance of peace and tranquillity and prevention of religious and racial conflict, the grant of monopolies or special privileges to private undertakings contrary to the public interests and unfair discrimination in commercial and industrial matters, the protection of the interests of the Anglo-Indian or Domiciled Community and of the public services, and the protection of the special educational interests of Muslims, religious institutions, and depressed and backward classes.

Public Services.—Section IV.—The committee recommend that the public services employed under provincial governments be classified into three divisions, namely, Indian,

provincial and subordinate. The chief criterion will be the appointing authority. The Indian services will be recruited according to methods laid down in statutory orders by the Secretary of State and appointments to these services will be made by the Secretary of State, who will also fix rates of pay, sanction all new appointments, and secure pensions by statutory orders under the new Government of India Bill. The committee recommend that statutory rules should provide that no orders affecting adversely emoluments or pensions shall be passed in regard to officers of all-India services in transferred departments without the concurrence of the Governor. As a special measure of protection in the case of the Indian Medical Service propose that the medical department is transferred, statutory orders should provide that the private practice of officers of the Indian Medical Service will be regulated only by the Secretary of State. They further recommend that the Governor should be charged with the protection of the public services and with the duty of seeing that no orders affecting adversely the pension or emoluments of any officer are passed before they have been considered by both parts of the government. Appeal against such orders should lie to the Government of India and Secretary of State and no officer of all-India service should be liable to dismissal except by order of the Secretary of State. Questions of promotion, posting and discipline of officers with duties in both reserved and transferred departments should be treated in the manner explained above in connection with the relations of Governor in Council and ministers.

Provincial Division: pending legislation which will regulate recruitment, training, discipline, and the general conditions of service of the provincial services it is proposed that the existing rules should *mutatis mutandis* be binding on ministers as regards transferred departments. In regard to pay, allowances, leave, etc., local Governments will be granted wide powers. In the matter of discipline the main features of the procedure proposed for all-India service should apply to existing member of provincial services. In case of future entrants all orders affecting emoluments and pensions, and orders of dismissal, should require the personal concurrence of the Governor.

Subordinate Division: the rights and privileges of present incumbents should be maintained by means of directions to the Governor in Council as regards reserved subjects and instructions to the Governor in respect of transferred subjects. So far as future entrants are concerned the Governor in Council and Governor and ministers must be left to regulate the entire working of the services.

In conclusion the committee suggest that as far as possible members of all-India services should be secured in the benefits of the conditions under which they were recruited. The principle that alterations shall not press hardly on members of the services should be formally recognised in the future.

Finance.—Section V.

Under this head the most important proposals are—

(1) that a strong audit system independent of the Governor in Council and ministers be established and that audit reports be laid before provincial legislature;

(2) that the provincial finance departments should be reserved and that in relation to transferred subjects the duties of the department should be to advise and criticise, final decision resting with the minister subject to assent of the Governor;

(3) that a list of taxes which local Governments may impose without previous sanction of the Government of India should be included in a schedule to be provided for by rule;

(4) that provincial governments should ordinarily borrow through the Government of India, but, subject to approval of that Government as to time and method of borrowing, should be free to borrow in Indian market in certain circumstances;

(5) that subject to certain simple regulations provincial governments should be left to their own responsibility in the disposal of their balances;

(6) that a schedule of municipal and local taxation should be prescribed by the Governor-General in Council and previous sanction should only be required in case of tax not included in schedule.

REMARKS BY GOVERNMENT.

The following is a summary of a Government of India Despatch of April 16, 1919, dealing with the report on the division of functions which is summarised above:—

The Government of India accept generally the lists of all-India and provincial subjects; changes proposed are for the most part additions to make lists more specific or complete. They also accept general principles for regulation of intervention by the Government of India in provincial subjects, while suggesting somewhat different procedure in matter of provincial legislation in interests of simplicity. Principal changes in this respect are: (1) to give Government of India right to legislate in provincial matters where uniformity is desirable instead of marking

transferred subjects as subject to Indian legislation, and (2) to give the Governor greater freedom in matter of reserving bills by omitting provision for compulsory reservation. Government of India also agree with committee as to Governor's powers of intervention in transferred subjects though they would vary slightly the procedure in emergency cases where minister is unable to accept Governor's decision; they generally approve proposals regarding rules of executive business and instrument of instructions, of which a draft is appended to despatch. They regard the list of transferred subjects as generally suitable but are unable to agree to transfer of higher education and development of industries.

DIVISION OF FUNCTIONS.

The following are the revised lists of All-India, Provincial and Transferred subjects, as proposed by the Government of India. The indented paragraphs are the Government of India's remarks :—

1. All questions connected with His Majesty's naval, military and air forces in India, including the Royal Indian Marine, volunteers, cadets, and armed forces other than military and armed police maintained by provincial Governments.

1*a*. Ordnance, munitions, censorship, compulsory purchases, requisitioning, prize courts, registration of mechanical transport, etc., for naval and military purposes.

2. External relations, including naturalisation and aliens.

3. Relations with Native States.

3*a*. Political charges.

3*b*. Regulation of ceremonial, including titles and others, precedence and darbars, and civil uniforms.

4. Any territory in British India other than provinces mentioned in the schedule.

The schedule will include the eight provinces to which the reform scheme applies.

4*a*. The Andaman and Nicobar Islands.

4*b*. Territorial changes other than intra-provincial, and declaration of laws.

5. Excluded areas (This entry is included provisionally and subject to any recommendations for the treatment of those areas which may be made in a subsequent despatch).

These are the backward areas referred to in paragraph 199 of the Joint Report which it is suggested should be administered by the Governor under the control of the Government of India.

6. Communications—to the extent described under the following heads :—

(*a*) Railways and tramways, except (*i*) tramways with municipal areas and (*ii*) light and feeder railways and tramways.

(*b*) Such roads, bridges, ferries, tunnels, ropeways, causeways, and other means of communication as are declared by the Governor-General-in-Council to be of military importance.

(*c*) Aircraft, aircraft factories, aerodromes and landing places.

(*d*) Inland waterways, to an extent to be declared by the Governor-General-in-Council.

7. Shipping and Navigation (including shipping and navigation on inland waterways in so far as declared by the Governor-General-in-Council under 6 (*d*)).

It is suggested that wide powers should be delegated to local Governments to enable them to regulate local shipping traffic, *e.g.*, coasting vessels plying between ports in the same province, especially as regards accommodation provided for passengers.

8. Lightships, beacons, buoys and light-houses (including their approaches).

9. Port quarantine and marine hospitals.

10. Ports declared to be major ports by the Governor-General-in-Council.

11. Posts, telegraphs and telephones and wireless installations.

12. Sources of imperial revenue, including customs, cotton excise duties, taxes on income, salt, stamps (non-judicial).

13. Currency and coinage.

14. Public debt of India.

15. Savings banks.

16. Department of the Comptroller and Auditor-General.

17. Civil Law, including laws regarding status, property, civil rights and liabilities and civil procedure.

18. Commerce, including banking and insurance.

19. Trading companies and other associations.

19*a*. Regulation of food supply, fodder, fuel and trade generally between provinces in times of scarcity.

20. Control of production, supply and distribution of any articles in respect of which control by a central authority is declared by the Governor-General-in-Council essential in the public interests.

20*a*. Control of cultivation and manufacture of opium and sales of opium for export.

20*b*. Stores and Stationery.

Subject to the introduction as soon as possible of such measures of decentralization as are found by the Governor-General in Council to be advisable.

21. Control of petroleum and explosives.

The law regarding petroleum and explosives is at present under the direct control of the Government of India and uniformity of law and administration is desirable.

22. Geological survey.

22*a*. The development of industries including industrial research.

Vide 24, Provincial. The fact that the development of any industry or any industrial research is being taken up by the Government of India will not prevent local Governments from also taking it up.

23. Control of mineral development, in so far as such control is reserved to the Governor-General in Council under rules made or sanctioned by the Secretary of State, and regulation of mines.

The rules regulating the grant of licenses to prospect for minerals and the grant of leases of mines and minerals are made by the Governor-General in Council and sanctioned by the Secretary of State in Council.

Mining administration is now controlled by the Government of India and there is a small expert department of Inspectors working freely all over India. It would be impossible without great extravagance and loss of efficiency for each province to have its own expert staff.

24. Inventions and designs.

25. Copyrights.

26. Emigration and immigration and inter-provincial migration.

It is considered desirable to make inter-provincial migration an All-India subject to be administered by the provincial Governments as agents.

26a. Pilgrimages beyond British India.

27. Criminal Law, including criminal procedure.

The insertion of penal clauses in a provincial Bill will not bring the Bill within the scope of this entry.

27a. State prisoners.

28. Central police organization and railway police so far as jurisdiction and cost are concerned.

29. Control of possession and use of arms.

30. Central agency for medical research and central institutions of scientific and industrial research, including observatories, and central institutions for professional or technical training.

30a. Government of India records and the Imperial Library.

30b. Government of India buildings.

31. Ecclesiastical administration.

The expenditure is incurred entirely by the Government of India. The Bishops and clergy are under the administrative control of the local Governments, except that the Bishop of Calcutta, as Metropolitan, is under the control of the Government of India. As a large portion of the expenditure is on behalf of the army, the subject must be an All-India one.

31a. Higher language examinations to an extent to be declared by the Governor-General in Council.

32. Survey of India.

33. Archæology.

Provisionally included : *vide* para. 39 of the despatch.

34. Zoological survey.

35. Meteorology.

36. Census and Statistics.

37. All-India Services.

37a. Government servants' conduct rules.

38. Legislation in regard to any provincial subject, in so far as such subject is stated in the Provincial List to be subject to Indian legislation, and any powers relating to each

subject reserved by legislation to the Governor-General in Council.

39. All matters expressly excepted from inclusion in the list of provincial subjects.

40. All other matters not included in the list of provincial subjects.

Provincial Subjects.—1. Local self-government, that is to say, matters relating to the constitution and powers of municipal corporations, improvement trusts, district boards, mining, boards of health and other local authorities established in the province for purposes of local self-government, exclusive of matters arising under the Cantonments Act.

2. Medical administration, including hospitals, dispensaries and asylums.

Legislation regarding the status and civil rights and liabilities of lunatics is an all-India subject. The question of medical registration falls under head 42.

3. Public health and sanitation and vital statistics.

3a. Pilgrimages within British India.

4. Education, excluding—

(1) the Benares Hindu University and such other new universities as may be declared to be all-Indian by the Governor-General in Council.

(2) Chiefs' colleges and any educational institutions maintained by the Government of India ; subject to Indian legislation.

(a) controlling the establishment, and regulating the constitutions and functions of new universities ; and

(b) defining the jurisdiction of any university outside its own province ;

and, in the case of Bengal, up till the time when the recommendations of the first statutory commission are carried into effect, subject to Indian legislation with regard to the Calcutta University and the control and organisation of secondary education. (*Vide* paragraph 58 of fourth despatch.) If higher education is reserved there will be less need for this provision.

5. Public Works included under the following heads :—

(a) Provincial buildings ;

(b) Roads, bridges, ferries, tunnels, ropeways, causeways, and other means of communication other than such as are declared by the Governor-General in Council to be of military importance ;

(c) Tramways within municipal areas ;

(d) Light and feeder railways and tramways.

6. Control of water supplies in rivers, streams and lakes, irrigation and canals, drainage and embankments, water storage and water power, subject to such rules in regard to technical scrutiny and financial sanction as may be prescribed.

7. Land Revenue administration, as described under the following heads :—

(a) Assessment and collection of land revenue ;

(b) Maintenance of land records, survey for revenue purposes, records of rights ;

(c) Laws regarding land tenures, relations of landlords and tenants, collection of rent ;

(d) Court of Wards, encumbered and attached estates ;

(e) Land improvement and agricultural loans ;

(f) Colonization and disposal of Crown lands and alienation of land revenue.

Vide para. 61 of the fourth despatch.

7a. Management of State properties.

8. Famine relief.

9. Agriculture, including research institutes, experimental and demonstration farms, introduction of improved methods, provision for agricultural education, protection against destructive insects and pests and prevention of plant diseases.

10. Civil Veterinary Department, including provision for veterinary training, improvement of stock, and prevention of animal diseases.

11. Fisheries.

12. Co-operative Societies.

13. Forests, including preservation of game therein.

14. Land acquisition, subject to Indian legislation as regards acquisition of land for public purposes.

15. Excise, that is to say, the control of production, manufacture, possession, transport, purchase and sale of alcoholic liquor and intoxicating drugs, and the levying of excise duties and license fees on or in relation to such articles, but excluding, in the case of opium, control of cultivation, manufacture and sale for export.

16. Administration of justice, including the constitution, maintenance and organization of courts of justice in the province, both of civil and criminal jurisdiction, other than a High Court, a Chief Court, or the Court of a Judicial Commissioner, but subject to Indian legislation as regard courts of criminal jurisdiction.

17. Provincial law reports.

18. Administrator-General and Official Trustee, subject to Indian legislation.

19. Judicial stamps, subject to Indian legislation.

20. Registration of deeds and documents.

21. Registration of births, deaths and marriages.

Existing Indian legislation provides for the following classes, *viz.*, members of every race, sect or tribe to which the Indian Succession Act, 1865, applies, and all persons professing the Christian religion.

22. Religious and charitable endowments.

This entry is provisional on the contemplated Indian Act on this subject being secured from alteration by rules under the proposed section 79 (3) (i) of the Government of India Act.

23. Development of mineral resources which are Government property, subject to rules made or sanctioned by the Secretary of State, but not including the regulation of mines.

24. Development of industries, including industrial research.

Vide 22a. All-India.

25. Industrial matters included under the following heads :—

(a) Factories ;

(b) Settlement of labour disputes ;

(c) Electricity ;

(d) Boilers ;

(e) Gas.

Inspectors of Factories, Electricity and Boilers are provincial officers under the control of the local Governments, but we consider that there are strong grounds for maintaining uniformity in regard to the four matters which are made subject to Indian legislation. As regards the other subjects, especially those included under "Welfare of labour," it is desirable to give the provinces freedom of initiative.

(f) Smoke nuisances ; and

(g) Welfare of labour, including provident funds, industrial insurance (general, health and accident) and housing : subject as to (a), (b), (c) and (d) to Indian legislation.

26. Adulteration of food-stuffs and other articles.

27. Weights and measures.

28. Ports, except such ports as may be declared by the Governor-General-in-Council to be major ports.

29. Inland waterways, including shipping and navigation thereon so far as not declared by the Governor-General-in-Council to be under control of the Government of India, but subject as regards inland steam vessels to Inland legislation.

30. Police, other than the jurisdiction and cost of railway police.

31. Miscellaneous matters :—

(a) regulation of betting and gambling ;

(b) prevention of cruelty to animals ;

(c) protection of wild birds and animals ;

(d) control of poisons, subject to Indian legislation ;

(e) control of motor vehicles, subject to Indian legislation as regards licenses valid throughout British India ; and

(f) control of dramatic performances, and cinematographs, subject in the case of the latter to Indian legislation in regard to certification.

32. Control of newspapers, books and printing presses, subject to Indian legislation.

33. Coroners.
 34. Criminal tribes, subject to Indian legislation.
 35. European vagrancy, subject to Indian legislation.
 36. Prisons, prisoners and reformatories, subject to Indian legislation.
 37. Pounds and cattle-trespass.
 38. Treasure trove.
 39. Museums (except the Indian Museum, Imperial War Museum and the Victoria Memorial, Calcutta), and zoological gardens.
 39a. Provincial records and libraries.
 39b. European cemeteries and historical monuments and memorials.
 40. Government Press.
 41. Franchise and elections for Indian and provincial legislatures.

Vide para. 76 of fourth despatch, and para. 2 of fifth despatch.

42. Regulation of medical and other professional qualifications and standards, subject to Indian legislation and provision for medical education.

Under this head will fall the administration of the existing provincial Medical Registration Acts. Power is reserved to the Indian legislature in order to secure uniformity and maintain the standards of professional qualifications.

43. Control of the public services, other than the All-Indian services serving within the province, subject to Indian legislation.

44. Sources of provincial taxation not included under previous heads, whether (a) taxes included in the schedule of additional provincial taxes or (b) taxes outside this schedule in the case of which the prior sanction of the Governor-General-in-Council has been obtained to the necessary legislation.

45. Borrowing of money on the sole credit of the province subject to such rules as are made by the Secretary of State in Council.

46. Any matter which, though falling within an all-India subject, is declared by the Governor-General-in-Council to be of a merely local or private nature within the province.

Provincial Subjects for Transfer.—The list of provincial subjects for transfer is as follows, the indented paragraphs being the Government of India's remarks:—

IN ALL PROVINCES.

Local self-government, that is to say, matters relating to the constitution and powers of municipal corporations, improvement trusts, district boards, mining, boards of health and other local authorities established in the province for purposes of local self-government exclusive of matters arising under the Cantonments Act.

The question of control, if any, to be exercised over policemen or watchmen by local authorities should be left to be determined

by provincial legislation relating to local self-government.

Pounds, where they are managed by local authorities, will come under local self-government.

Medical administration, including hospitals, dispensaries and asylums.

It will be noted that it is proposed to reserve "Regulation of medical and other professional qualifications and standards," and to make this matter subject to Indian legislation (*vide* Provincial List, item 42). The administration of the Medical Registration Acts will thus be reserved, and the power of securing uniformity of standards will remain with the Indian legislature.

Public health and sanitation of vital statistics. Port quarantine and marine hospitals, is an all-India subject.

The Sanitary Department will be responsible for the compilation of vital statistics, but at present in most provinces will have to rely on the services of other departments for their collection.

Pilgrimages within British India.

Primary and middle vernacular education.

It is suggested that the Governor shall be required to have special regard to certain interests in education (*vide* paragraph 67).

IN ALL PROVINCES EXCEPT ASSAM.

Public Works included under the following heads:—

(a) Provincial buildings connected with transferred departments:

(b) Roads, bridges, ferries, tunnels, ropeways, causeways and other means of communication other than such as are declared by the Governor-General-in-Council to be of military importance;

(c) Tramways within municipal areas.

IN ALL PROVINCES.

Agriculture, including research institutes, experimental and demonstration farms, introduction of improved methods, provision for agricultural education, protection against destructive insects and pests and prevention of plant diseases.

Civil Veterinary Department, including provision for veterinary training, improvement of stock and prevention of animal diseases.

IN ALL PROVINCES EXCEPT ASSAM.

Fisheries.

In Assam the restrictive measures taken for the protection of fish have been unpopular, and the administration of fisheries is closely connected with the Land Revenue Department.

IN ALL PROVINCES.

Co-operative Societies.

IN BOMBAY ONLY.

Forests, including preservation of game therein.

The existing powers of the Governor-General in-Council under the Forest Act will remain,

and any provincial legislation affecting them will be subject to previous sanction.

IN ALL PROVINCES EXCEPT ASSAM.

Excise, that is to say, the control of production, manufacture, possession, transport, purchase and sale of alcoholic liquor and intoxicating drugs, and the levying of excise duties and license fees on or in relation to such articles, but excluding, in the case of opium, control of cultivation, manufacture and sale for export.

With reference to the proposed restriction of the purposes for which the Government of India will exercise their power to intervene in transferred subjects (*vide* para. 4 of the despatch), the following points affecting Excise require special mention :—

(1) The power of the Government of India to safeguard the administration of customs revenue will involve power to control the incidence of excise revenue: (i) on any liquor which is likely to compete directly with imported liquor; and (ii) on any article imported into British India which is liable on importation to the payment of customs duty.

(2) With regard to provincial action restricting the introduction into a province of excisable articles the position will be as follows:—

The Government of India will be entitled to intervene, in the case of excisable article imported from outside British India, to protect their custom duties, and, in the case of excisable articles in transit from or to other provinces, territories and States of India, for the purpose of protecting the interests of such other provinces, territories or States.

(3) The Government of India will be entitled to intervene in matters affecting the supply of excisable articles to His Majesty's forces.

In Madras and Bombay, Excise, Salt and Customs are dealt with under a unified system of administration. Salt and Customs are all-India subjects, and the question of making arrangements for the separate administration of these subjects when the transfer of Excise takes effect will be considered by the Government of India.

IN ALL PROVINCES.

Registration of deeds and documents.

Registration of births, deaths and marriages.

Vide note to item 21, provincial list.

Religious and charitable endowments.

Adulteration of foodstuffs and other articles.

Weights and measures.

Museums (except the Indian Museum, the Imperial War Museum and the Victoria Memorial, Calcutta) and Zoological gardens.

WORK OF JOINT SELECT COMMITTEE.

The reference of the Government of India Bill to a Select Committee of both Houses, recommended in the course of the second reading debate in the House of Commons by the Secretary of State, was formally made in both Chambers early in July, 1919, and after discussing procedure in private and hearing a statement from the India Office, the Committee held their first public sitting on 16th July. The selection for the chairmanship of so strong and impartial a peer as the Earl of Selborne was generally approved, and though criticisms were heard from some quarters of the presence on the Committee of both Mr. Montagu and his Parliamentary Lieutenant, Lord Sinha, questions addressed to the Speaker showed that the presence of two Ministers on such a committee though unusual was not without precedent. The other members of the Committee—7 being chosen from each House—were the Duke of Northumberland, the Marquess of Crewe, Viscount Midleton, Lord Islington, Lord Sydenham, Mr. T. J. Bennett, Sir Henry Craik, Major Ormsby-Gore, Sir D. Maclean, Sir J. D. Rees, and Mr. Ben Spoor. Sir Donald Maclean subsequently resigned and his place was taken by Mr. F. D. Acland.

The Committee pursued their task with great assiduity, receiving and acting upon the

special authority of both Houses to sit during the summer recess. Many Indian deputations went to London to lay documents before the Committee and tender evidence. In all 70 witnesses were heard, sometimes in groups of two or three at a time, but usually separately, and the Minutes of Evidence extend to 581 closely printed foolscap pages. The work of public examination ended on October 15, and the subsequent private deliberations, suspended on two occasions for preparing or revising the draft report, ended on 17th November. The Report was issued two days later, as a White paper, accompanied by the Bill as amended and Vols. II and III. (Minutes of Evidence, Appendices, No. 203).

Immense importance attaches to the Report, for since the Bill can be little more than a framework if there is to be due flexibility and adaptation in the new Indian constitution, it may be regarded as an integral part of India's new Charter. The extent to which the recommendations and interpretations are accepted will form an authoritative standard of the intentions of Parliament in regard to the details and practical working of the new Constitution. They resolve doubts, real or merely argumentative, as to the policy of Parliament, and by including the limiting as well as the

operative sentences of the pronouncement of 20th August, 1917, in the preamble to the Bill, they demonstrate that the responsibility for deciding the further stages in the journey India has been started upon rests on Parliament alone, "and that it cannot share this responsibility with, much less delegate it to, the newly elected legislatures of India."

The recommendations and accompanying revised Bill were received in the most diverse quarters as marking distinct improvements on the measure as read a second time in the Commons. Their general effect is to simplify the machinery, while materially enlarging the

reality, of this first instalment towards the goal of giving India an autonomous system comparable with those possessed by the self-governing Dominions. They also develop the ideal of fixing responsibility where it actually resides, instead of covering it up by elaborate devices. Stress is laid upon the importance of the Governor fostering in every way free consultation between the two halves of his Government without obscuring their separate distinctive responsibilities. In many ways the dangers of friction and deadlock arising from the original scheme are mitigated, while the reality of growing degrees of autonomy is more clearly defined.

SUMMARY OF THE REPORT.

The main recommendations of the Committee's report were officially summarised as follows:—

(1) The Committee endorse the general scheme of the Bill as an accurate interpretation of the announcement of the 20th of August, 1917, and are of the opinion, after considering all the suggested alternatives, that the partition of the domain of provincial government into two fields, with the consequent division of responsibility, is the best way of giving effect to the spirit of the declared policy of Government.

(2) While laying great stress on the necessity of clearly demarcating and fixing the responsibility of each half of the executive for its own sphere, the Committee regard it as of the highest importance that the Governor should foster the habit of free consultation between both halves and that he should insist upon it in all important matters of common interest.

(3) The Committee believe that the revised Bill secures to the Governor-in-Council on the one hand, and to the Government of India on the other, the possession of unquestioned means of discharging their respective responsibilities to Parliament, the maintenance of which, except in so far as they are released from that responsibility by the changes made under the Bill, the Committee regard as an essential feature of the policy of His Majesty's Government.

(4) The Committee recommend the immediate constitution of a Standing Joint Committee of both Houses for the purpose of securing closer Parliamentary touch with Indian affairs. One of the most important points on which consultation with this Committee will be required is for the examination of draft rules under the Bill and for the examination of the first rules. They recommend that the present Committee should be reappointed.

(5) The scheme of the Bill, which leaves much to be carried out by rules, is endorsed as necessary and right. From this point the order of the recommendations follows for the most part the arrangement of the revised Bill. The whole of the announcement is included in

the preamble in order to dissipate doubts as to the authority of the different parts.

(6) **Functions Committees.**—The lists of subjects as revised after consultation at the India Office and put in as evidence by Mr. Feetham are accepted. This involves the recommendation that the whole of education subject to reservations about Universities and the development of industries, should be transferred subjects.

(7) **Rules for Allocation of Revenue** between the two halves of Government.—The Committee do not endorse the suggested separation of the sources of revenue, but recommend that the Governor be empowered if the joint purse is found to produce friction at any time to make an allocation of a definite proportion of the revenue and balances to continue in force for at least the whole life of the existing Legislative Council. If the Governor requires assistance in making the allocations, he should be allowed at his discretion to refer the matter for decision to an authority to be appointed by the Governor-General. Until a mutual agreement between both halves of the Government has been reached, or until the allocation has been made by the Governor, the total provision of the different heads of expenditure in the provincial budgets of the preceding financial year is to hold good.

(8) There is no cause at present for disturbing the existing relations between the Local Government of India and the Secretary of State. The question whether and in what manner Local Governments should correspond with the Secretary of State should be left to the latter to decide. Now intervention by the Government of India in provincial matters will require a corresponding change in the Secretary of State's control. India is not yet ripe for a Federal system, and while an extensive delegation to the Provincial Governments of some of the powers and duties now in the hands of the Government of India is essential, the Central Government cannot be relegated to the functions of mere inspection and advice.

(9) **Relations of Governor and Ministers.**—Ministers will have the option of resigning if their advice is not accepted by the Governor, and the Governor will have the right of dismiss-

ing a Minister whose policy he believes to be seriously wrong, or out of accord with the views of the Legislature. If the Governor resorts to dissolution to find new Ministers, the Committee hope that he will be able to accept the view of the new Ministers regarding the issue which forced the dissolution. The Ministers will certainly be at least two in number in every province, and the fact that they undoubtedly will act together has been recognised and provided for as a desirable position. The Governor should never hesitate to point out to his Ministers what he thinks is the right course, or to warn them if he thinks their proposed course is wrong, but if the Ministers decide not to adopt his advice the Governor should ordinarily allow the Ministers to have their way. Mistakes will doubtless follow but they will bring experience. The status of Ministers should be similar to that of a member of the Executive Council.

(10) Normally the Executive Council is expected to consist of two members. If in any case the Council includes two members of the Civil Service, neither of whom is an Indian, the Committee think it should also include two non-official Indians.

(11) **Franchise Recommendations.**—The following recommendations relate to the Franchise Reports :—

(a) The Government of India to adjust the allocation of seats so as to secure a larger representation of the rural population, as distinct from the urban and a better representation of the urban wage-earning classes, and an effort should be made to remedy as far as possible the disparity between the size of the electorates in the different provinces. The adjustment, however, must in all cases be by increasing and not by diminishing, the representation already proposed by the Southborough Report.

(b) **Depressed Classes.**—The Government of India should be instructed after consultation with the Local Governments to provide a larger share of real representation by nomination, having regard to the number in each province, to increase and not to diminish the general electorate, and the nominees are to be taken if suitable, and if not otherwise available from the ranks of the public services, without thereby increasing the prescribed ratio of official members.

(c) The non-Brahmins in Madras must be provided with separate representation by means of the reservation of seats. The Brahmins and non-Brahmins to be invited to settle the number of seats to be reserved and the method of reservation, and failing an agreement a decision to be made by an arbitrator appointed by the Government of India.

(d) The Mahrattas in Bombay are recommended for a similar treatment.

(e) The Electoral Rules to be so framed that if any Provincial Legislative Council decides by a resolution in favour of women's franchise, women should be put on the register of that province.

(f) With the one exception named in the preceding head the franchise not to be altered for the first ten years and Legislative Councils to be unable to make alterations.

(g) The special representation of landholders in the provinces to be reconsidered by the Government of India in consultation with the local Governments.

(h) The franchise for University seats to be extended to all graduates of over seven years' standing.

(i) European representation is accepted except for Bengal. The Government of India should consider with the Bengal Government its readjustment in that province.

(j) The eligibility of the rules and subjects of Native States to vote or stand for election to be settled for each province by the local Government.

(k) Dismissal from Government service not to be a disqualification for election, but a criminal conviction involving a sentence of more than six months' imprisonment to disqualify for five years from the date of the expiry of the sentence.

(l) The Franchise Committee's proposal for a residential qualification and the maintenance of the Lucknow Compact is endorsed.

(m) The Committee advise the full exploration of the principle of proportional representation with a view to its consideration by a Statutory Commission.

(n) A complete and stringent Corrupt Practices Act to be passed and brought into operation before the first elections.

(12) Great importance is attached to the question of the selection of the first Presidents of the Legislative Councils and to the necessity of imbuing the Councils from the start with the spirit and convention of Parliamentary procedure.

(13) **Voting the Provincial Budget.**—When the Council reduce, or fail to vote a Budget demand, for a transferred subject, the Committee consider the Governor will be justified if so advised by his Ministers, in re-submitting the vote to the Council for the purpose of reviewing the decision. The Governor's power of the restoration of reduced reserved votes must be regarded as real and its exercise is not arbitrary. All proposals for taxation should be considered and agreed upon by both halves of the Government before submission to the Legislative Council.

(14) The Committee reject the **Grand Committee Procedure** as failing in a crisis to secure the object in view and as perpetuating the disadvantages of the official *bloc*. The responsibility for reserved legislation is with the Governor-in-Council, and no advantage is gained by attempting to conceal this. The Governor's power is to be exercised only after opportunity for full discussion in the Legislature, and the Standing Committee of Parliament should be specially consulted on acts of this kind by the Secretary of State.

(15) **Indian Legislature.**—The scheme of the Report and the original Bill for the operation of the Council of State is rejected for much the same reason as is the Grand Committee. The Council of State is to be constituted as a true revising Chamber from the start. The Franchise Committee's proposal for election to the Council of State is rejected, and Government is to be instructed to propose a different system immediately to be elaborated before the inauguration of the new constitution of the Legislative Assembly. The views in paragraph 39 of the Franchise Despatch are endorsed, and the Government of India is to be instructed to propose a better scheme of election at the earliest possible moment.

(16) The first President of the Legislative Assembly should be qualified by experience of the House of Commons and knowledge of Parliamentary procedure and should be chosen with a view to the influence which he may be expected to exert on the whole of Parliamentary procedure in India.

(17) The voting of the Indian Budget is not introduced as establishing any measure of responsible Government in the Central Administration, and the power of the Governor-General to disregard adverse votes is to be understood to be real and intended to be used if and when necessary. The clause is passed on the understanding that the Assembly will be reasonably representative in character and directly elected.

(18) The Committee recommend that in future not less than three members of the Governor-General's Executive Council should be Indians.

(19) All costs of the **India Office** not being agency charges should be placed on the British estimates.

(20) The Council of India is retained without change in its statutory position with all its advantages of tradition and authority, but a re-adjustment of work is desirable so as to provide a less rigid procedure and to enable the introduction of the portfolio system to be made. More Indians should be introduced, and the period of tenure of office should be reduced to five years with this object in view and in order to secure a continual flow of fresh experience from India.

(21) No statutory change in the relations between the Government of India and the Secretary of State is possible so long as the former remains wholly responsible to Parliament but the conventions governing these relations may be wisely modified to meet the fresh circumstances caused by a large elected majority in the Legislative Assembly. Thus the Secretary of State, in the exercise of his responsibility to Parliament, which he cannot delegate, may reasonably consider that only in exceptional circumstances should he be called on to intervene in matters of purely Indian interest in which the Government of India and the Indian Legislature are in agreement. A particular instance of this convention would be tariff arrangements. Fiscal autonomy cannot be guaranteed by Statute without the unconstitutional result of limiting the ultimate control by Parliament of the Crown's power of veto. It can only be assured by the acknowledgment of a convention that the Secretary of State should so far as possible, abstain from intervention in fiscal

matters when the Government of India and the Indian Legislature agree and should only intervene to safeguard the international obligations of the Empire or any fiscal arrangements within the Empire to which His Majesty's Government is a party. The relations between the Secretary of State and the local Governments as regards intervention in respect of reserved subjects of purely provincial interest should be governed by similar principles. Over transferred provincial subjects the control of the Government of India and of the Secretary of State should be confined to the limits defined under clause 13 of the Bill.

22. The **Public Services** changes made in part 14 of the Bill indicate generally the Committee's views on this matter. If there are members of a service whose doubts as to the changes to be made are so deeply rooted that they feel they cannot usefully endeavour to take part, the Committee think it would be fair if possible to offer them an equivalent career elsewhere or, as a last resort, that they should be allowed to retire on such pension as the Secretary of State may consider suitable to the length of service.

23. The appointment of a **Statutory Commission** at the end of ten years is endorsed. The Commission should include the Government of India in the scope of the enquiry, and consider generally what further advance can be made. Meanwhile no substantive changes should be introduced.

24. The Committee do not advise the inclusion of **Burma** in the scope of the scheme, and while not doubting that the Burmese have deserved and should receive an analogous Constitution, they are impressed with the essential differences between Burma and India.

25. The institution of **Standing Committees** as a general rule in Provinces is strongly recommended, and in such departments of the Government of India as the Governor-General may decide.

26. The principles governing the revision of assessment of **Land Revenue** should be brought under closer regulation by statute as soon as possible as part of a general policy, bringing within the purview of legislation the imposition of new burdens.

27. Importance is attached to Sir Michael Sadler's recommendations of **Education Boards** and the Committee hope that Ministers will see their way to constitute them from the outset. The advisability of creating Local Government departments in every Province is also commended to Ministers.

The policy endorsed in paragraph 326 of the Joint Report is strongly endorsed. In conclusion the Committee repudiate any suggestion that the changes made by the Bill imply any condemnation of the present system of Government in India. The present form of Government arises out of the fact that Parliament has held the Government of India responsible to itself for every action; and that there has hitherto been no constitutional self-Government effort. The welfare of the masses of the peoples of India has everywhere and always been the spirit of Government.

THE BILL PASSED.

The Bill, as amended by the Committee, was introduced in the House of Commons without delay and became law, with several slight alterations as the result of criticisms made during the course of the debate, before Parliament was prorogued. In the speech from the throne at the time of the prorogation His Majesty referred to the measure in the following terms:—"A measure which marks the first stage in the development of responsible

government in India has become law, and I rely on all My Subjects to work together for its success. In a Proclamation which I am addressing to My Viceroy and to the Princes and People of India, I am expressing My hope that harmonious political life will be steadily built up on the foundations thus laid, and I am announcing My intention of sending My Son, the Prince of Wales, to India to inaugurate the new Constitution."

THE ROYAL PROCLAMATION.

His Majesty was at the same time pleased to cause the following Proclamation to be issued with the signification of the Royal Assent to the Government of India Act, 1919 :

GEORGE THE FIFTH, By the Grace of God of the United Kingdom of Great Britain and Ireland, and of the British Dominions beyond the Seas, King, Defender of the Faith, Emperor of India.

To My Viceroy and Governor-General, to the Princes of the Indian States, and to all My subjects in India, of whatsoever race or creed, Greeting.

1. Another epoch has been reached to-day in the annals of India. I have given My Royal Assent to an Act which will take its place among the great historic measures passed by the Parliament of this Realm for the better government of India and the greater contentment of her people. The Acts of 1773 and 1784 were designed to establish a regular system of administration and justice under the Honourable East India Company. The Act of 1833 opened the door for Indians to public office and employment. The Act of 1858 transferred the administration from the Company to the Crown, and laid the foundations of the public life which exists in India to-day. The Act of 1861 sowed the seed of representative institutions, and the seed was quickened into life by the Act of 1909. The Act which has now become law entrusts elected representatives of the people with a definite share in the government and points the way to full responsible government hereafter. If, as I confidently hope, the policy which this Act inaugurates should achieve its purpose, the results will be momentous in the story of human progress; and it is timely and fitting that I should invite you to-day to consider the past and to join me in My hopes of the future.

2. Ever since the welfare of India was confided to Us, it has been held as a sacred trust by Our Royal House and Line. In 1858 Queen Victoria, of revered memory, solemnly declared Herself bound to Her Indian subjects by the same obligations of duty as to all Her other subjects; and She assured to them religious freedom, and the equal and impartial protection of the Law. In His message to the Indian people in 1903, My dear Father, King Edward

VII, announced His determination to maintain unimpaired the same principles of humane and equitable administration. Again, in His Proclamation of 1908, he renewed the assurances which had been given 50 years before, and surveyed the progress which they had inspired. On My Accession to the Throne in 1910, I sent a message to the Princes and peoples of India, acknowledging their loyalty and their homage, and promising that the prosperity and happiness of India should always be to Me of the highest interest and concern. In the following year I visited India with the Queen-Empress and testified My sympathy for her people and My desire for their wellbeing.

3. While these are the sentiments of affection and devotion by which I and My predecessors have been animated, the Parliament and the people of this Realm and My officers in India have been equally zealous for the moral advancement of India. We have endeavoured to give to her people the many blessings which Providence has bestowed upon ourselves. But there is one gift which yet remains, and without which the progress of the country cannot be consummated—the right of a her people to direct her affairs and safeguard her interests. The defence of India against foreign aggression is a duty of common Imperial interest and pride. The control of her domestic concerns is a burden which India may legitimately aspire to take upon her own shoulders. The burden is too heavy to be borne in full until time and experience have brought the necessary strength; but opportunity will now be given for experience to grow and for responsibility to increase with the capacity for its fulfilment.

4. I have watched with understanding and sympathy the growing desire of My Indian people for representative institutions. Starting from small beginnings, this ambition has steadily strengthened its hold upon the intelligence of the country. It has pursued its course along constitutional channels with sincerity and courage. It has survived the discredit which at times and in places lawless men sought to cast upon it by acts of violence committed under the guise of patriotism. It has been stirred to more vigorous life by the ideals for which the British Commonwealth fought in the Great War, and it claims support in the part which India has taken in our common struggles, anxieties and victories.

In truth, the desire after political responsibility has its source at the root of the British connection with India. It has sprung inevitably from the deeper and wider studies of human thought and history which that connexion has opened to the Indian people. Without it the work of the British in India would have been incomplete. It was therefore with a wise judgment that the beginnings of representative institutions were laid many years ago. Their scope has been extended stage by stage until there now lies before us a definite step on the road to responsible government.

5. With the same sympathy and with redoubled interest I shall watch the progress along this road. The path will not be easy, and in the march towards the goal there will be need of perseverance and of mutual forbearance between all sections and races of My people in India. I am confident that those high qualities will be forthcoming. I rely on the new popular assemblies to interpret wisely the wishes of those whom they represent, and not to forget the interests of the masses who cannot yet be admitted to the Franchise. I rely on the leaders of the people, the Ministers of the future, to face responsibility and endure misrepresentation, to sacrifice much for the common interest of the State, remembering that true patriotism transcends party and communal boundaries; and while retaining the confidence of the legislatures to co-operate with My officers for the common good in sinking unessential differences and in maintaining the essential standards of a just and generous government. Equally do I rely upon My officers to respect their new colleagues and to work with them in harmony and kindness; to assist the people and their representatives in an orderly advance towards free institutions; and to find in these new tasks a fresh opportunity to fulfil, as in the past, their highest purpose of faithful service to My people.

6. It is My earnest desire at this time that, so far as possible, any trace of bitterness between My people and those who are responsible for My government should be obliterated. Let those who, in their eagerness for political

progress, have broken the law in the past respect it in the future. Let it become possible for those who are charged with the maintenance of peaceful and orderly government to forget the extravagances which they have had to curb. A new era is opening. Let it begin with a common determination among My people and My officers to work together for a common purpose. I therefore direct My Viceroy to exercise, in My name and on My behalf, My Royal clemency to political offenders, in the fullest measure which in his judgment is compatible with the public safety. I desire him to extend it, on this condition, to persons who, for offences against the State or under any special or emergency legislation, are suffering imprisonment or restrictions upon their liberty. I trust that this leniency will be justified by the future conduct of those whom it benefits, and that all My subjects will so demean themselves as to render it unnecessary to enforce the laws for such offences hereafter.

7. Simultaneously with the new constitution in British India, I have gladly assented to the establishment of a Chamber of Princes. I trust that its counsels may be fruitful of lasting good to the Princes and States themselves, may advance the interests which are common to her territories and to British India, and may be to the advantage of the Empire as a whole. I take the occasion again to assure the Princes of India of My determination ever to maintain unimpaired their privileges, rights and dignities.

8. It is My intention to send My dear son, the Prince of Wales, to India next winter to inaugurate on My behalf the new Chamber of Princes and the new constitution in British India. May he find mutual goodwill and confidence prevailing among those on whom will rest the future service of the country, so that success may crown their labours and progressive enlightenment attend their administration. And with all My people I pray to Almighty God that by His wisdom and under His guidance India may be led to greater prosperity and contentment, and may grow to the fullness of political freedom.

GEORGE, R. I.

The Indian National Congress.

The following record of the early work of the Congress is written by the Hon. Sir Dinsha Wacha:—The Congress was practically founded in 1885 by the late Mr. Allan Octavian Hume, a retired member of the Indian Civil Service, and the son of the distinguished Joseph Hume, M.P., whose radicalism is so well known and who was one of the chief advocates of Retrenchment and Reform in the House of Commons in the forties or fifties. Mr. Hume had a distinguished career in the service. In his younger days when Collector and Magistrate at Etawah, he had rendered invaluable service in quelling the Mutiny in its incipient stage. For this service he was created a Civil Companion of the Bath, a rare honour in those days for a young Anglo-Indian Civil Servant. He retired from the service in 1883 after having honourably filled several high offices, the last of which was the Home Secretaryship of the Government of India. The policy of Lord Lytton's Government (1876-80) had aroused discontent in the country. The imposition of the Vernacular Press Act, commonly known as the Black Act, and the uncalled for hostilities with the Amir Shere Ali of Afghanistan which culminated in the Second Afghan War were the subject of much adverse criticism among the most moderate but enlightened Indians in all parts of the country. It was recognised in all quarters that the people should organise themselves by way of a conference to ventilate their grievances. Correspondence was passing among the Indian leaders of thought in the different provinces as to the formation of such a conference on a sound and permanent footing. The vicereignty of Lord Ripon (1880-84) gave the necessary stimulus and encouragement. Thus by 1883, when Mr. Hume retired, the idea of the Conference had so far taken body and form that, with the sympathetic support of Mr. Hume, a Union was established after he had in 1883 the genuine support of many sterling friends of India in Parliament, especially John Bright and Mr. Stagg. Mr. Hume had been a silent but watchful observer of events and felt that he must give his active support to the movement, his heart being fully prepared to ameliorate the social, economical and political condition of the Indians. He was in close communication with the leaders in various provinces. Here it may also be worth while recording the fact that during the preliminary stage of the inception of the Congress, Mr. Hume, who had retired to Simla, had had the opportunity of consulting Lord Dufferin on the subject and it is a fact that His Lordship was at one with the object and greatly encouraged Mr. Hume in his mission. Subsequently after 1888 His Lordship, for reasons of his own, which have never been authoritatively declared, chose to assume a hostile attitude towards the organisation but it was effectually met by the speech which Mr. George Yule made in December 1888 at the Congress of Allahabad.

First Session.

Progress was so far made as to formulate the programme of a first meeting in Poona which at the time was the seat of great political activity. The Christmas week of 1885 was resolved upon for the inauguration of the Con-

ference. Unfortunately, when the preparations were being made cholera broke out in the City of Poona and it was deemed unsafe to invite delegates there. Accordingly the seat of the first assembly was hurriedly transferred to Bombay under the auspices of the Bombay Presidency Association, with its then active honorary secretaries, Messrs. Pherozeshah M. Mehta, Kashinath Trimbuk Telang and Dinsha Edulji Wacha. It was at the same time resolved to christen it "The Indian National Congress," having regard to the fact that its principal aim was faithfully to echo the public opinion of all India. So many misleading statements were made during the earliest years of the Congress as to its aims and objects that it may be useful to relate what they are as laid down by Mr. Hume himself in a speech he made at Allahabad in 1888, on the eve of the session of the Fourth Congress at that centre. Firstly, he prefaced his enumeration of the objects by stating that "no movement in modern historical times has ever acquired, in so short a period, such an appreciable hold on the minds of India, none has ever promised such wide reaching and beneficent results." Further on, it was observed that "the Congress movement is only one outcome, though at the moment the most prominent and tangible, of the labours of a body of cultured men, mostly born natives of India, who some years ago banded themselves together to labour silently for the good of India." As to the fundamental principles of the Congress they are:—

Firstly, the fusion into one national whole of all the different and discordant elements that constitute the population of India;

Secondly, the gradual regeneration along all lines, mental, moral, social and political of the nation thus evolved; and,

Thirdly, the consolidation of union between England and India by securing the modification of such of the conditions as may be unjust or injurious to the latter country.

The Split.

It was on the fundamental principles above stated that the Congress carried out its appointed work midst much misrepresentation, obloquy and even abuse, till 1907 when an extreme faction of delegates deliberately chose to raise a split in the united camp. At the Congress held in Surat in that year the session had to be abandoned owing to the violent outbreak of the factional spirit of those who since have been known as "Extremists," in contrast with the overwhelming majority of those entertaining sober views who are called "Moderates;" but if the proceedings were for the time abandoned, it was not without the leading men immediately organising themselves on the spot to take ways and means for the holding of future congresses and for the purpose of framing a written constitution of which the most important part was the creed of the Congress. In other words, the unwritten aims and objects of the Congress were reduced to writing in a crystallised form. As such it may be repeated here, as it should dispel all doubts, misgivings or misunderstandings of the true aims and objects of the Congress.

"The objects of the Indian National Congress are the attainment by the people of India of a system of Government similar to that enjoyed by the self-governing members of the British Empire, and a participation by them in the rights and responsibilities of the Empire on equal terms with those members. These objects are to be achieved by constitutional means by bringing about a steady reform of the existing system of administration and by promoting national unity, fostering public spirit and developing and organising the intellectual, moral, economic and industrial resources of the country."

Every delegate to the National Congress is obliged by the Congress Committee of the province from which he is sent to express in writing his acceptances of the above creed and his willingness to abide by the Constitution and the rules framed under it.

This Constitution has been in full working order since 1908. It is unalterable save by a Resolution of a majority in Congress assembled. It provides a guiding or directing staff of chosen leaders selected by each province and annually confirmed from the platform of the Congress by the President, Ex-Presidents, Secretaries and other office-bearers are nominated *ex-officio* members and the whole Committee is known by the name of the All India Congress Committee. The provinces are the same as the territorial divisions of the Government of India. The Committee of each Province is called the Provincial Congress Committee on whom devolves the duty, under the constitution and the rules, of calling meetings for the election of delegates, suggesting subjects to be brought forward for the consideration of the Congress and all cognate matters. The Congress declares each year at the close of the session where the next Congress is to be held. The town or city where it is to be held begins to make all preparations fully six months before the date of the holding of the session which has hitherto invariably been during the three days immediately succeeding Christmas Day. That period is specially selected owing to the great convenience it affords to all classes of delegates in the country to attend—a convenience not offered at any other time during a year. A Reception Committee is formed with a leading person as its Chairman. That Committee divides its work among various sub-committees such as finance, correspondence, housing, feeding and so on. A band of active young persons volunteer to serve the different sub-committees. Formerly they were chiefly selected from among the student class but owing to the orders of Government in the Education Department, that students should take no active part in politics, volunteers are now wholly recruited from the circle of men of business or profession. Apart from the delegates who generally number from 500 as a minimum to 1,000 or so as a maximum there is always a large number of visitors. So that the pandal is erected to contain at least 5,000 seats. There have been some notable Congresses when the number seated has come to as many as 10,000. That was the number which congregated in Bombay in 1889 when Sir William Wedderburn presided and was accompanied from London by the

late Mr. Charles Bradlaugh who afterwards introduced the first Reform Bill of the expanded Legislative Councils in Parliament in 1890. Delegates had had to pay a fee of Rs. 20 for attendance up till 1912, but the fee has since been reduced to Rs. 15. They are charged a very moderate fee for the days they are lodged and boarded. Some well-to-do delegates hire bungalows at their own expense, but the majority of delegates outside those of the province where a Congress is held, generally accept Congress accommodation which in smaller towns becomes a very serious and uphill task indeed.

British Committee.

It may be observed in conclusion that the Congress has an organisation also in London which is called the British Committee of the Congress. It is furnished with funds provided by the Indian National Congress. It has an establishment of its own and attached to it, though with independent income, an organ of opinion, called "India", which echoes the salient events of what may have happened every week in India. As such it performs useful service. It is well informed and is liberally circulated among members of Parliament who sympathise with Indian aspirations or take interest in the general progress and welfare of India. The Committee consists of retired Anglo-Indians and was for years presided over by that well-wisher and disinterested friend of India, Sir William Wedderburn, (d. 1918) who was twice elected President of the Congress. The Committee invariably invites distinguished or leading Indians when in London to take part in its deliberations. The Committee itself is in constant touch with all proceedings in the House of Commons on Indian affairs and often helps members to put questions when needed. Some years ago it formed a standing committee of members of the House of Commons and an attempt is about to be made to revive it. The Committee also keeps itself in communication with the India Office and often acts as a vehicle of conveying Indian opinion to the Secretary of State. As such the organisation renders valuable service to Indian cause in England.

The Congress Re-United.

For some years following 1907 efforts were made to heal the split and these were without avail until 1916 when a re-united Congress met at Lucknow under the presidency of Babu Ambica Charan Muzumdar of Faridpur in Bengal.

The Reforms.

The attitude of the Indian National Congress towards the Montagu-Chelmsford Scheme is fully summarised in the section Constitutional Reform in India (*q.v.*). What is commonly known as the joint scheme of the Indian National Congress and the Moslem League which is discussed in the Montagu-Chelmsford Report will be found set out in the Indian Year Book for 1918, pp. 659, 660, 661, 662, 663, 664 and 665. As is shown in the section on Constitutional Reform the effect of this Scheme was to sever the nominal unanimity between the Moderate and the Extreme Wings. The Congress went over entirely to the Extreme Wing and the Moderate Party is now setting up its own organisation.

THE 1919 SESSION.

In theory, at all events, the session of the Indian National Congress which began at Amritsar in Christmas week should have been devoted to the consideration of the new Government of India Act, embodying the scheme of constitutional reform in India, which became known shortly before the Congress met. In practice it was chiefly devoted to the consideration of the Punjab disorders. It was indeed unfortunate that at this important stage in the political evolution of India the Congress and the Moslem League should have met in a Province and a city of unhappy memories. Reference is made elsewhere to the outburst of lawlessness in the Punjab in April, the measures necessary to control it, the establishment of martial law and the protests made at many of the measures adopted under martial law, which led to the appointment of what is called the Hunter Commission to inquire into these allegations. The evidence given before this Commission in the Punjab in November aroused strong feelings in India. The portions of the evidence which raised the greatest indignation were the firing on the crowd which attended a proclaimed meeting in the Jallianwalla Bagh at Amritsar, when four hundred people were killed; and the manifestation of the desire of some of the officers entrusted with the administration of martial law to humiliate members of the educated community rather than to prevent disorder or to punish lawlessness. These conditions made Amritsar the most unpromising centre in India for the dispassionate consideration of a great scheme of constitutional reform. However the decision to hold the session at Amritsar was taken before the Punjab disturbances occurred; although some effort was suggested to move the venue, it was not accepted, and experience showed that the decision to have the session in this city of unhappy memories was wise, although it involved considerable risks.

The Speeches:—It was inevitable in these circumstances that the session should be dominated by memories of the disturbances; and although a great tranquillising influence was exercised by the King's Proclamation to the people of India announcing the Royal Assent to the Reform Act, and the promise of a generous amnesty—many of the ex-prisoners released under the amnesty were present at and took part in the discussions—the atmosphere was heated throughout. The address of the chairman of the Reception Committee, Swami Shradanand, was largely confined to the Punjab disturbances, although he pleaded for a policy of forgiveness. The President of the Congress, Pandit Motilal Nehru, also devoted himself mainly to the disturbances. His pronouncement on the Reform Act was somewhat halting, as that of one who saw the great advance which the Act embodies, and at the same time was too much afraid of the Advanced Wing in the Congress boldly to say so. The text of his references to the Act consisted of advice not to belittle the measure, because it gave them some power and opened new opportunities of service, but to make the most of what they had got and at the same time continue to press for what was their due.

The Discussions:—At all sessions of the Congress the chief discussions take place in the Subjects Committee, where the resolutions to be placed before the full session are drafted. The proceedings of this Committee are supposed to be private; in practice they are published in all the chief newspapers of India. From the reports of the proceedings in the Committee which have been published without contradiction, it is clear that the Advanced Wing took charge of the Congress, and overbore the handful of Moderates, prominent amongst whom were Mr. Sastri and Mrs. Besant, who strove for a more reasonable attitude. The principal points of difference were as to whether the Congress should express gratitude for the Reforms and disapprove of the omission from the Royal Proclamation of any reference to the Punjab disturbances. The Resolutions submitted to the Session were compromises, but compromises in which the Advanced Wing had the stronger influence. There was however a certain departure from practice in the bold moving in the Congress Session of amendments to the resolutions as issuing from the Subjects Committee. The Honourable Mr. Sarma, an active member of the Imperial Legislative Council, stood out strongly against the motion to condemn the Viceroy for his attitude of aloofness to the Punjab measures. Again, Mrs. Besant and Mr. Ghandi stood out against the chilly resolution on the Reforms. Neither of these three was able to secure acceptance of the individual views expressed; but the independence of all three is a welcome innovation in Indian politics.

General Conclusions:—The nature of the Congress session has undergone a great change during the past twenty-five years. Until last year the proceedings were invariably conducted in English, the one lingua franca in India. The writer can remember the Amraoti Congress in 1897 when a speaker was refused a hearing because he spoke in Urdu. But at the Delhi session in 1918 the practice was introduced of inviting "Peasant Delegates" without payment of the usual fee. These understand no language but the local vernacular; they will not listen to any speeches save in the local vernacular. The effect of this is curious. The vernaculars in the Punjab are Hindi and Urdu. These are not spoken freely in Bombay, Bengal and the Central Provinces; they are as foreign as English in Madras. The prodigious oration which the President had prepared in English was never delivered; a brief summary in English and in the vernacular was all the audience would listen to. Those who were dependent on English as the medium of expression were at a considerable disadvantage. The Congress session has now become such an unwieldy assembly and so uncontrollable, that as one commentator put it, it is now for all practice purposes a provincial assembly where if a vote were taken the audience would always be found to agree with the last speaker.

The Resolutions:—The principal resolutions are set out below:

II.—(a) This Congress protests against the attempt being made in South Africa and parti-

cularly the Transvaal to deprive the Indian settlers of the rights of property and trade hitherto enjoyed by them and trusts that the Government of India will secure the repeal of the recently enacted legislation and otherwise ensure the protection of the status of the Indian settlers in South Africa.

(b) This Congress is of opinion that the anti-Indian agitation now going on in East Africa is utterly unscrupulous and trusts that the Government of India will safeguard the right of free and unrestricted emigration from India to East Africa and the full civic and political rights of the Indian settlers in East Africa including the East African territory conquered from Germany.

V.—This Congress while fully recognising the grave provocation that led to a sudden outburst of mob frenzy, deeply regrets and condemns the excesses committed in certain parts of the Punjab and Gujerat resulting in the loss of lives and injury to person and property during the month of April last.

VI.—That, in view of the fact that neither the Hunter Committee nor the Congress Commission has finished its examination of witnesses and issued its report, this Congress while expressing its horror and indignation at the revelations already made and condemnation of the atrocities admitted, refrains from urging any definite steps to be taken against the offenders, yet having regard to the cold-blooded, calculated, massacre of innocent men and children, an act without parallel in modern times, it urges upon the Government of India and Secretary of State that, as a preliminary to legal proceedings being taken against him, General Dyer should be immediately relieved of his command.

Resolved further that the Congress desire to place it on record that in its opinion the Government of India and the Punjab Government must in any event be held responsible for the inexcusable delay in placing an authoritative statement of the massacre of *Jallianwalla Bagh* before the public and His Majesty's Government.

VII.—In view of the oppressive regime of Sir Michael O'Dwyer in the Punjab and the admitted fact brought out before the Hunter Committee that he approved of and endorsed General Dyer's massacre at the *Jallianwalla Bagh*, this Congress calls upon His Majesty's Government to relieve Sir Michael O'Dwyer of his present duties in this country as a member of the Army Commission as a preliminary to necessary legal action being taken against him.

XI.—(a) This Congress offers its respectful condolence to the relatives of those persons whether English or Indian who were killed and sympathy to those wounded or incapacitated during the April disturbances.

(b) This Congress further resolves that the site known as *Jallianwalla Bagh* in Amritsar be acquired for the Nation and be registered in the names of the Hon'ble Pandit Madan Mohan Malaviya and the Hon. Pandit Moti Lal Nehru as trustees and that it be used as a memorial to perpetuate the memory of those

who were killed or wounded on the 13th day of April last during the massacre by General Dyer.

XIII.—In view of the fact that Lord Chelmsford has completely forfeited the confidence of the people of this country, this Congress humbly beseeches His Imperial Majesty to be graciously pleased immediately to recall His Excellency.

XIV.—(a) This Congress reiterates its declaration of last year that India is fit for full responsible government and repudiates all assumptions and assertions to the contrary wherever made.

(b) That this Congress adheres to the resolutions passed at the Delhi Congress regarding Constitutional Reforms and is of opinion that the Reforms Act is inadequate, unsatisfactory and disappointing.

(c) That this Congress further urges that Parliament should take early steps to establish full responsible government in India in accordance with the principle of Self-determination.

(d) Pending such introduction this Congress trusts that so far as may be possible they will so work the Reforms as to secure early establishment of full responsible government and this Congress offers its thanks to Rt. Honourable E. S. Montagu for his labours in connection with the Reforms.

XV.—This Congress respectfully protests against the hostile attitude of some of the British Ministers towards the Turkish and 'Khilafat' question as disclosed by their utterances and most earnestly appeals to and urges upon His Majesty's Government to settle the Turkish question in accordance with the just and legitimate sentiments of Indian Mussalmans and the solemn pledges of the Prime Minister without which there will be no real content among the people of India.

XXI.—This Congress is emphatically of opinion that in the immediate and imperative interest of this country as well as of the whole British Empire a Statute should be forthwith passed by the Imperial Parliament to guarantee the civil rights of His Majesty's Indian subjects and embodying the following provisions:—

(1) British India is one and indivisible and all political power is inherent in the people thereof to the same extent as in any other people or nation of the British Empire.

(2) That all Indian subjects of His Majesty and all the subjects naturalised or resident in India are equal before the law, and there shall be no penal or administrative law in force in this country, whether substantive or procedural, of a discriminative nature.

(3) That no Indian subject of His Majesty shall be liable to suffer in liberty, life, property, or in respect of free speech or writing or of the right of association, except under sentence by an ordinary Court of Justice and as a result of lawful and open trial.

(4) That every Indian subject shall be entitled to bear arms subject to the purchase of a license as in Great Britain, and that the right shall not be taken away save by a sentence of an ordinary Court of Justice.

(5) That the Press shall be free and that no license or security shall be demanded on the registration of a press or a newspaper.

(6) That corporal punishment shall not be inflicted on any subject of His Majesty save under conditions applying equally to all other British subjects.

(7) That all laws, ordinances and regulations now or hereafter in existence that are anywise

inconsistent with the provisions of this statute shall be void and of no validity whatever.

XXIX.—This Congress places on record its warmest thanks to the All-India Moslem League for passing a resolution recommending the substitution of other animals instead of cows in respect of sacrifices on the occasion of Bakrid and recognises it as a great step towards the completion of Hindu-Moslem unity.

The Moslem League.

The Indian Moslem League was established in 1906. Prior to that time the Indian Moslems had stood aloof from politics. Acting under the guidance of the greatest man they have produced, **Sir Syed Ahmad**, they devoted their attention to education, founding the Aligarh College with the special purpose of making up the leeway of Mahomedans in education, and left politics to the other Indian peoples. A few Mahomedans joined the National Congress and took part in its annual sessions; but the community as a whole stood aside from political movements.

In 1906 however changes occurred which impelled Indian Moslems to action. Under the Act of 1892, constituting the Indian Legislative Councils, there was no specific Moslem representation and in the elections which had taken place under that Act the Moslems had for all practical purposes failed to find selection. Therefore, when the amendment of the Act and the extension of the representative principle were under discussion, they were stirred to action. They feared lest, under an academic system, adapted only to a homogeneous people, their distinct communal interests would either secure no representation at all, or only inadequate representation. They therefore took counsel together and approached the Viceroy in deputation, headed by His Highness the Aga Khan, and presented their views in an important State paper.

First Constitution.

It was felt that in view of the changed conditions the Moslems should organise their own political society for the expression of their communal policy. This was the origin of the Moslem League. The rules and regulations of the League provided for a constitution, with provincial branches, and defined the objects of the League in the following language:—

The objects of the League shall be—

(a) to promote among Indian Mussalman feelings of loyalty towards the British Government, and to remove any misconception that may arise as to the intentions of Government with regard to any of its measures:

(b) to protect the political and other rights and interests of Indian Mussalman and to place their needs and aspirations before the Government in temperate language:

(c) without prejudice to the objects mentioned under (a) and (b) of this section, to

promote so far as possible concord and harmony between the Mussalman and other communities of India.

Revised Constitution.

In 1912 and 1913 Moslem opinion as expressed by the League underwent a certain change. First at a meeting of the Council, afterwards at the annual session which was held at Lucknow, the constitution was amended so as to include in the objects of the League the attainment of a system of **self-government** in India under the Crown. The objects of the League, as defined in the most recent publication, are thus set forth:—

The objects of the League shall be:—

(a) to maintain and promote among the people of this country feelings of loyalty towards the British Crown:

(b) to protect and advance the political and other rights and interests of the Indian Mussalman:

(c) to promote friendship and union between the Mussalman and other communities of India:

(d) without detriment to the foregoing objects, attainment, under the ægis of the British Crown, of a system of self-government suitable to India, through constitutional means, by bringing about, amongst others, a steady reform of the existing system of administration, by promoting national unity, by fostering public spirit among the people of India and by co-operating with other communities for the said purposes.

This change in the constitution of the League produced much discussion and was opposed by many of the older men who had led the community.

There is a branch of the Moslem League in London.

The headquarters of the League are at Lucknow.

The attitude of the Moslem League towards the Scheme for Indian Constitutional Reform prepared by Lord Chelmsford and Mr. Montagu is indicated in the Section Constitutional Reform in India (*q.v.*). The Moslem League generally endorsed the views expressed by the Extreme Wing of the Indian National Congress. At the Delhi Session in December 1918 certain special questions relating to the future

of Turkey figured prominently in the discussion and the following resolutions *inter alia* were passed:—"That the All-India Moslem League enters its strong protest against the occupation of Jerusalem and Najafshraf by His Majesty's forces and hopes that all such places will be immediately restored. The League further requests His Majesty's Government, in view of the wishes of the Mussalmans of India, to use its good offices to dissuade other Allied Powers from taking any steps which might affect the position and status of their holy places."

"That the All-India Moslem League deems it necessary to remind Government of the declaration of policy made by His Majesty's Government that the question of the Caliphate is one for Moslem opinion alone to decide and begs to point out that any departure from that policy will cause great resentment and ill-feeling among Mussalmans. The League further requests His Majesty's Government to dissuade any Allied Power that might contemplate any interference with the question from taking any action in this matter."

THE 1919 SESSION.

The annual session of the Moslem League was held at Amritsar almost coincidentally with the meeting of the Indian National Congress. The Chairman of the Reception Committee was Dr. Kitchlew who was released from detention for his participation in the Punjab disturbances almost immediately before the session began. The President of the League was Hakim Ajmal Khan. In the course of his presidential address he went over very much the same ground, particularly in relation to the conditions in the Punjab, as the President of the Indian National Congress. Naturally he made special reference to the position with regard to the Khilafat and the holy places of Islam, saying Mussalmans cannot be expected to forget that over these lands, which were the cradle of Islam and in which holy places were situated, no non-Moslem can have the semblance of the right of a mandatory or other rule. Trampling upon Moslem sentiments would mean not creating a transitory but a perennial unrest in the entire Moslem world, which meant the deliberate awakening of unfriendly feelings in unobtrusive people. The President criticised the Anglo-Persian Agreement as the last straw on the load of the Indian Moslem anxiety and characterised Persia as the Egypt of Asia which would cease to have any conception of political liberty.

On all general political issues the resolutions of the Moslem League were a pale shadow of the resolutions of the Indian National Congress. A special feature of what may for all practical purposes be called a joint session was the resolution carried on the subject of cowkilling which is an old subject of soreness and dispute

between the Hindu and Mahomedan communities.

Important Resolutions:—"With a view to reciprocate the good feeling shown towards Mussalmans by their Hindu brethren and to strengthen the growing unity between them and the Mussalmans of India the Mussalmans should on occasion of Bakr-Id festival substitute as far as possible the sacrifice of other animals in place of cows.

"This meeting of the All-India Moslem League shares with the entire Moslem world the wide belief that His Imperial Ottoman Majesty, Sultan Waheeduddin, is the recognised Khalfa of Islam and places on record its deep-seated and unshakeable devotion to the sacred person of His Imperial Majesty as a successor of the Prophet and the head of Islam.

"This meeting of the All-India Moslem League expresses its deep disappointment at the disregard shown by the British Government to the repeated representations made by Indian Mussalmans through their representatives in England and India regarding the question of Khilafat, holy places and Jazirat-ul-Arab and feels constrained to express that no settlement contemplating the dismemberment of Turkey would ever satisfy Indian Mussalmans but keep them in a state of perpetual dissatisfaction and discontent, for the grave consequences of which they shall not be responsible. Under the circumstances the Mussalmans would be fully justified to carry on all possible methods of constitutional agitation open to them including a boycott of the British army if it is likely to be used outside India for Imperial and anti-Islamic purposes."

THE MODERATE CONFERENCE.

In the Indian Year Book, 1919, the course of events which led to a definite rupture between the Extremist and Moderate sections of the Indian National Congress is set out. For some years there was growing up a strong line of cleavage between these two elements in Indian public life. It came to a head at the Surat Session of 1907 which broke up in disorder because the Extremists could not get their own way. In 1916 a nominal union between the two wings was established when a reunited Congress met at Lucknow. The unity then established was however more artificial than real and the essential differences between the two wings were accentuated when the Montagu-Chelmsford Report on Indian consti-

tutional reforms was published in 1918. A grave question then arose as to what should be the Indian attitude towards the scheme of reforms then outlined. The Extremists at first tried to stampee the country into a rejection of the proposed reforms *in toto*. The Moderates, whilst refusing to accept every line of the Report as sacrosanct were determined to regard it as a marked development in the constitutional progress of India, and whilst pressing for an extension of the measures there proposed decided to accept them as a great step forward in the political evolution and as substantially satisfactory. The strong attitude taken by them and the growing appreciation in the country of the real liberality of the Reform

Scheme prevented the irreconcilables from stampeding political opinions as they had hoped. Nevertheless there was no prospect of agreement between the two wings, mainly because the Extremists insisted on characterising the reforms as disappointing and unsatisfactory, whilst the Moderates regarded them as liberal and progressive although falling short in some respects of their ideal.

Consequently the Moderates declined to join in a special session of the Indian National Congress which was held in August 1918 to consider the Reform Scheme; it held a special conference of its own where its own ideas were put forward in a series of resolutions. The bulk of the Moderates also abstained from the ordinary Christmas Session of the Congress in Delhi in 1918; they have continued to remain aloof from the older organisation and have set up their own. The essential differences between the two wings are clearly revealed by a study of the resolutions carried at the different sessions. A brief summary of the proceedings at the Indian National Congress has been given in the preceding pages. The Moderates held their own session in Calcutta when the Chairman of the Reception Committee, Sir Binode Mitter, very clearly indicated their attitude towards the scheme. Sir Binode Mitter emphatically declared that the Act brought new opportunities of service. Hitherto Indians had had no share in the actual government of the country; they were in the position of mere critics. They must now forget merely to criticise as they would have henceforth to solve real difficulties. The Chairman of the Conference, Sir P.S. Sivaswamy Iyer, emphasised these essential points. He said that the Act constituted a decided advance upon existing conditions and it gave them great opportunities of acquiring a practical knowledge of the art of responsible government.

The essential creed of the Moderates is indicated in the principal resolutions adopted at their session which are set out below:

Important Resolutions.—(a) This Conference desires to convey to the Right Honourable Mr. Montagu its heartfelt appreciation of the statesmanship, courage and single minded devotion displayed by him in initiating and carrying the reform proposals and setting India firmly on the road to responsible government.

(b) This Conference desires to record its proud appreciation of the Right Honourable Lord Sinha's services to the country in his capacity as a member of the War Cabinet, as a representative of India at the Peace Conference and in his conduct of the Reform Bill in the House of Lords.

(c) This Conference desires to thank the Joint Committee for removing several defects in the original Reform Bill and improving it.

While regretting the omission to introduce some measure of responsibility in the central government, this Conference welcomes the Government of India Act of 1919 as a definite and substantial step towards the progressive realisation of responsible government. This Conference appeals to all sections of the community, European and Indian, officials and

non-officials, whole-heartedly to co-operate for the successful working of the Act.

This Conference deeply regrets the long delay in the settlement of satisfactory peace terms with Turkey and views with grave concern any political action which may tend to affect the position or dignity of the Sultan of Turkey as the Khalifa or the guardian of the holy places of Islam. This Conference earnestly calls the attention of His Majesty's Government to the depth and intensity of the feelings of His Majesty's subjects on this question and strongly pleads for an early and satisfactory settlement in consultation with the Allies. This Conference emphatically urges that any settlement which disregards the sentiments of the Moslem world with which it is in agreement will create widespread discontent and may be detrimental to peaceful progress. No settlement of the Turkish question can in the opinion of this Conference be satisfactory which contravenes the principles of justice and national integrity and even fails to redeem the solemn pledges made during the war.

This Conference wishes to record its emphatic condemnation of the outrages committed by the mobs at several places in the Punjab and elsewhere and its deep sympathy with the victims and their families. This Conference while in no way wishing to anticipate the decision of the Hunter Committee, must express its sense of profound horror and indignation at the manner in which the situation which arose in the Punjab in April and May last was dealt with by the officials concerned as disclosed in their own evidence.

This Conference is of opinion that it is imperatively necessary—(1) to make amends for the outraged feelings of the Indian nation and that British honour and justice should be vindicated by taking steps to bring to justice any officials high or low, civil or military, who may be found to have acted unreasonably and in excess of their powers or to have authorised such acts; (2) that reparation should be made for all serious hardship caused by unwarranted acts of severity; (3) that safeguards should be provided against the recurrence of such things in the future. This Conference authorises its All-India Committee—(1) to take such action as may be necessary on the publication of the Report of the Hunter Committee; (2) to consider the necessity of the following safeguards among others and taking such further action as may be necessary:—(a) that the introduction, exercise and duration of martial law should be subject to the same constitutional limitations as in England; (b) that martial law should not be introduced unless it is impossible for the civil courts to sit and exercise their functions; (c) that the power of creating new offences for breach of regulations and providing penalties therefor should not be delegated to military officers; (d) that if courts martial are allowed to sit when civil courts are sitting any person not subject to the Naval Discipline Act or to military law who is charged with the contravention of any regulation should be allowed the option of a trial by the civil court; (e) that the remedy in the nature of *Habeas Corpus* should be made available in all parts of British India; (3) to further the object

of the resolution by arranging for a deputation to England or otherwise.

(1) The Liberal Party of India will work for the success of the constitutional reforms by following a policy of co-operation, and of promoting good understanding among the different communities and interests in the country. It will aim at a higher standard of national efficiency by means of administrative reforms, the wider spread of education, the improvement of public health, economic development, and amelioration of the condition of the backward classes of the population.

(2) The organisation of the Liberal party shall be known as the National Liberal Federation of India and the future sessions of the All-India Moderate Conference shall be designated the annual sessions of the National Liberal Federation.

(a) That the Council be instructed to do all that is necessary and possible in connection with all action that has to be taken under the Government of India Act of 1919 and the reports of the Punjab Enquiry Commission and the Indian Army Commission, as well as to bring about the repeal or a radical amendment of the Indian Press Act and also the repeal of the Rowlatt Act. (2) That the Council be further instructed to organise a deputation to proceed to England to urge before the statesmen and publicists there the views of the Conference on the aforesaid subjects, and do such other work as the Council may decide.

(b) This Conference is of opinion that it is desirable that the various provincial organisations of the National Liberal Federation should consider the following subjects and frame suitable programmes of constructive work in connection therewith:—(1) The placing of the principles of land revenue settlements on a legislative basis. (2) A definite programme of development of irrigation if necessary by borrowed capital. (3) Development of provincial railways and reform of the present method of railway administration and of the railway tariff so far as it affects each province. (4) An immediate expansion of free elementary education with the ultimate goal of introduction of compulsory education at an early date. (5) Reforms connected with the elementary, secondary and higher education (collegiate and technical). (6) Development of agriculture and the improvement of the economic condition of the agriculturists. (7) Reform of the excise administration with a view to minimise gradually the consumption of liquor and with a view to the ultimate introduction of total prohibition. (8) Development and expansion of industries and the organisation of better credit for the rural classes. (9) The amelioration of the condition of the backward classes and the improvement of the present condition of labour and the housing of the poorer classes. (10) Retrenchment of public expenditure and reform of existing methods of administration with specific reference to the improvement of district administration. (11) Organisation of medical relief and sanitation.

The Afghan War.

Up to the time of going to press with this book the official despatches dealing with the Afghan War of 1919 have not been published, and, as only the scantiest details of the operations were given in the official communications published during the course of the war, nothing more than a summary of those operations is here attempted.

The first incursion of Afghans into territory indisputably within British limits occurred on May 8, when they occupied **Asa Khel**, but before that date an escort of the Khyber Rifles had been threatened near Landi Khana by tribesmen under Zar Shah who produced a firman from Amir Amanulla which practically amounted to a decree to raise war against the British Government. On the 5th the Afghans occupied Tor Sappa, Spin Tsuka and Bagh and two days later they fired on an aeroplane reconnaissance near Landi Kotal. By this time there was no doubt of the intentions of the Afghans, and our first steps to meet them were taken on the 5th, when **Landi Kotal** was reinforced from Peshawar, and on the following day when martial law was declared at Peshawar, where the Afghan postmaster, who had been distributing inflammatory literature and who had made himself the centre of agitation of the wildest character, was arrested and the city was cleared of other dangerous elements including three Indian agitators who gave themselves up. On May 9 the Afghans were driven out of Asa Khel, a small village near Landi Kotal, and an advance was made down the pass to the west of Landi Kotal to secure the springs and reservoirs at **Tangi**. On the same day the Afghan headquarters camp at **Dakka** was bombed by aeroplanes. On the 11th our advanced troops at Landi Kotal having been reinforced, the enemy were defeated at **Bagh** and driven of the Khargall ridge which they were holding in force. The enemy lost six guns and one Gardner gun and their casualties in killed were estimated at 100. On the 13th **Dakka**, which had previously been reported to have been evacuated by the enemy, was occupied by our troops without opposition. By this time considerable signs of indecision and hesitation were to be seen in the Afghan army and a communique issued on the 15th showed that the Afghan Commander-in-Chief had made a request for the cessation of hostilities in a letter of which the impertinence was only exceeded by its mendacity. The true facts of the outbreak of war were set out in a proclamation by the Viceroy addressed to the people of Afghanistan and published on the same day.

Disappointed of that assistance from India which they had been led by their agents to expect, the Afghans for the most part confined themselves to such operations as endeavouring to raise the tribesmen against us and to sniping and wire-cutting in the Khyber, but on May 16 they made an unsuccessful attack on our camp at **Dakka** and on the same day were driven off when following up our troops withdrawing from a reconnaissance near **Basawal**. On the

17th the Afghan position about two miles west of **Dakka**, held by eight battalions and guns was attacked and the enemy suffered heavy defeat losing five guns and about 300 killed. On the 19th and 20th **Jalalabad** was systematically bombed, two tons of explosives being dropped, and on the following day **Sardar Abdul Rahman**, the late Afghan envoy in India, made unofficial overtures for peace which were not supported by any credentials and which were generally construed as being no more than a ruse to gain time. The air raids were continued, **Kabul** and **Jalalabad** being bombed on the 24th. In the mean time the enemy extended the field of operations which had so far been confined chiefly to the Khyber area. On May 14 a party of Afghans had been defeated and driven with loss out of **Chitral** limits and on the 23rd the enemy was defeated and lost 250 killed and 4 guns near **Arnawai** in **Chitral**. A few days previously the enemy had entered the **Mohmand** country and were also making demonstrations on the **Paiwar** ridges.

Nadir Khan was reported to be sending troops down the **Kaitu** river and towards **Tochi**. That report was soon verified and as a result the **G. O. C. Tochi** was obliged to evacuate all the posts on the **Thal-Idakm** line and in **Upper Tochi**, so that the Afghans were able with **Mahsud** and **Waziri** assistance to occupy **Spinwam** and then to destroy the upper **Tochi** posts. This naturally reacted on the **North Waziristan Militia** who had until then remained loyal unlike the **Khyber Rifles** whom it had been found necessary (with the exception of 200-300 retained as messengers for political work) to disband. Desertions of militia men became frequent, and it was evident that the first impressions as to the attitude of the tribesmen would have considerably to be revised. In the **Khyber** area and farther north, however, the attitude of the tribesmen continued satisfactory, and the capture of the Afghan frontier post of **Spin Baldak** (May 26) by our troops in the **Chaman** area had a far reaching effect. Practically the whole garrison of that fort, which was said to be the strongest in Afghanistan, was either killed or taken prisoners. On May 26 the enemy occupied the hills near **Thal** and two days later entered and gutted the town, the fort being several times unsuccessfully attacked by **Nadir Khan's** troops. On the following day it was necessary to evacuate **Wana**, **Sawarkai** and the militia posts in the **Gomal**, the ammunition which could not be removed being destroyed previous to the evacuation. Except for several attacks on isolated posts the operations from this time onwards assumed an increasingly desultory character. On June 1st troops from **Kohat** reached **Thal** and drove the enemy off the hills to the south-east and on the next day defeated a party of the enemy on the hills north-west of the town. A punitive column was subsequently sent to operate against the **Biland Khel** villages south of **Thal**, and similar operations were undertaken in the **Tochi** valley. Among

the attacks on posts by the enemy the more important were on Jandola post by Mahsuds (May 30) on Manikhwan post in Zhob which the enemy captured on June 3rd; on Draband and Chaudwan, by Mahsuds and Sherwannis on June 4; on Fort Sandeman (June 10); and on Musa Khel in Zhob on June 11. Tribesmen also attacked a column marching from Lakaband to **Fort Sandeman** on June 8 and the column suffered 33 casualties before reaching its destination.

Negotiations for peace were begun by the Afghans late in May, their delegates arrived at Rawal Pindi on June 25 and on August 11 peace was signed. The **text of the peace** is as follows:—

Treaty of peace between the illustrious British Government and the independent Afghan Government concluded at Rawal Pindi on the 8th August 1919 corresponding to the 11th Ziqad 1337 Hijra.

The following articles for the restoration of peace have been agreed upon by the British Government and the Afghan Government: Article 1. From date of signing of this treaty there shall be peace between the British Government on the one part and the Government of Afghanistan on the other. Article 2. In view of the circumstances which have brought about the present war between the British Government and the Government of Afghanistan the British Government to mark their displeasure withdraw the privilege enjoyed by former Amirs of importing arms, ammunition, or warlike munitions through India to Afghanistan. Article 3. The arrears of the late Amir's subsidy are furthermore confiscated and no subsidy is granted to the present Amir. Article 4. At the same time the British Government is desirous of the re-establishment of the old friendship that has so long existed between Afghanistan and Great Britain provided they have guarantees that the Afghan Government are on their part sincerely anxious to regain the friendship of the British Government. The British Government are prepared therefore, provided the Afghan Government prove this by their acts and conduct, to receive another

Afghan mission after six months for the discussion and amicable settlement of matters of common interest to the two Governments and the re-establishment of the old friendship on a satisfactory basis. Article 5. The Afghan Government accept the Indo-Afghan frontier accepted by the late Amir. They further agree to the early demarcation by a British commission of the undemarcated portion of the line to the west of the Khyber where the recent Afghan aggression took place and to accept such boundary as the British commission may lay down. The British troops on this side will remain in their present positions until such demarcation has been effected.

Independence of Afghanistan.—The following cable from the Viceroy to the Secretary of State for India, dated 9th August, contains information supplementary to the Treaty:—

“ Sir H. Grant reports that after signature of Peace Treaty he handed Afghan delegate following letter: “ You asked me for some further assurance that the Treaty of Peace now offered by the British Government contains nothing that interferes with the complete liberty of Afghanistan in external or internal matters. My friend, if you will read the Treaty of Peace with care you will see that there is in it no such interference with the liberty of Afghanistan. You have informed me that the Government of Afghanistan is unwilling to renew the arrangement under which the late Amir, Habibullah Khan, agreed to follow the advice of the government of Great Britain in matters affecting the external relations of Afghanistan without reserve. I have therefore refrained from pressing this matter of which the Treaty of Peace contains no mention. By the said Treaty and this letter, therefore Afghanistan is left officially free and independent in its affairs, both internal and external. Furthermore, all previous treaties have been cancelled by this war.”

Official information about the Afghan War is contained in a Parliamentary Paper (CMD. 324) “ Papers regarding hostilities with Afghanistan, 1919 ” and two reports on the medical arrangements (CMD. 310) and (CMD. 398).

Posts and Telegraphs.

POST OFFICE.

The control of the Posts and Telegraphs of India is vested in an officer designated Director-General of Posts and Telegraphs who works in subordination to the Government of India in the Department of Commerce and Industry. The superior staff of the Direction, in addition to the Director-General himself, consists on the postal side of two Deputy Directors-General (who are officers of the rank of Postmaster-General), four Assistant Directors-General (whose status is similar to that of Deputy Postmasters-General), and two Personal Assistants (who are selected from the staff of Superintendents).

For postal purposes, the Indian Empire is divided into eight circles as shown below, each in charge of a Postmaster-General:—Bengal and Assam, Bihar and Orissa, Bombay, Burma, Central, Madras, Punjab and North-West Frontier, and United Provinces. The Central Circle comprises roughly the Central Provinces and the Central India and Rajputana Agencies.

The Postmasters-General are responsible to the Director-General for the whole of the postal arrangements in their respective circles, with the exception of those connected with the conveyance of mails by railways and inland steamers which are entrusted to three officers bearing the designation of Deputy Postmaster-General, Railway Mail Service. All the Postmasters-General are provided with Personal Assistants, while those in charge of the largest circles are also assisted by Deputy Postmasters-General. The eight Postal Circles and the jurisdictions of the three Deputy Postmasters-General, Railway Mail Service, are divided into Divisions, each in charge of a Superintendent; and each Superintendent is assisted by a certain number of officials styled Inspectors or Assistant Superintendents.

Generally there is a head post office at the head-quarters of each revenue district and other post offices in the same district are usually subordinate to the head office for purposes of accounts. The Postmasters of the Calcutta, Bombay, and Madras General Post Offices and of the larger of the other head post offices are directly under the Postmaster-General and the least of them exercises the same powers as a Superintendent of Post Offices in respect of inspections, appointments, leave and punish-

ments. The Presidency Postmasters, indeed, have one or more Superintendents subordinate to them. When the duties of the Postmaster of a head office become so onerous that he is unable to perform them fully himself, a Deputy Postmaster is appointed to relieve him of some of them, and if still further relief is required one or more Assistant Postmasters are employed. The more important of the offices subordinate to the head office are designated sub-offices and are usually established only in towns of some importance. Sub-offices transact all classes of postal business with the public, submit accounts to the head offices to which they are subordinate, incorporating therein the accounts of their branch offices, and frequently have direct dealings with Government local sub-treasuries. The officer in charge of such an office works it either single-handed or with the assistance of one or more clerks according to the amount of business.

Branch offices are small offices with limited functions ordinarily intended for villages, and are placed in charge either of departmental officers on small pay or of extraneous agents, such as school-masters, shopkeepers, land-holders or cultivators who perform their postal duties in return for a small remuneration.

The audit work of the Post Office is entrusted to the Accountant-General, Posts and Telegraphs, who is an officer of the Finance Department of the Government of India and is not subordinate to the Director-General. The Accountant-General is assisted by Deputy Accountants-General, all of whom, with the necessary staff of clerks, perform at separate headquarters the actual audit work of a certain number of postal circles.

In accordance with an arrangement which has been in force since 1883, a large number of sub-post offices and a few head offices perform telegraph work in addition to their postal work and are known by the name of combined offices. The policy is to increase telegraph facilities everywhere and especially in towns by opening a number of cheap telegraph offices working under the control of the Post Office. The telegraph expenditure on account of these combined offices is borne by the Telegraph Department to which the whole of their telegraph revenue is also credited.

The **Inland Tariff** (which is applicable to Ceylon and Portuguese India except as indicated below) is as follows:—

	When the postage is prepaid.	When the postage is wholly unpaid.	When the postage is insufficiently prepaid.
<i>Letters.</i>	Anna.	} Double the prepaid rate (chargeable on delivery).	} Double the deficiency (chargeable on delivery).
Not exceeding 1 tola	$\frac{1}{2}$		
Exceeding 1 tola but not exceeding two and a half tolas	1		
Every additional two and a half tolas or part of that weight	1		
<i>Book and pattern packets.</i>			
Every 10 tolas or part of that weight..	$\frac{1}{2}$		

Postcards.

Single	¼ anna.
Reply	½ "

(The postage on cards of private manufacture must be prepaid in full.)

Parcels (prepayment compulsory).

(a) Parcels not exceeding 440 tolas in weight:—

	Rs. a.
Not exceeding 20 tolas	0 2
Exceeding 20 tolas but not exceeding 40 tolas	0 3
For every additional 40 tolas or part of that weight	3 annas.

(b) Parcels exceeding 440 tolas in weight:—

4 annas for every 40 tolas or fraction thereof up to 800 tolas.

Registration is compulsory in the case of parcels weighing over 440 tolas.

These rates are not applicable to parcels for Portuguese India.

Registration fee.

	Rs. a.
For each letter, postcard, book or pattern packet, or parcel to be registered	0 2

Ordinary Money Order fees.

On any sum not exceeding Rs. 5	0 1
On any sum exceeding Rs. 5 but not exceeding Rs. 10	0 2
On any sum exceeding Rs. 10 but not exceeding Rs. 15	0 3
On any sum exceeding Rs. 15 but not exceeding Rs. 25	0 4
On any sum exceeding Rs. 25 up to Rs. 600	0 4

for each complete sum of Rs. 25, and 4 annas for the remainder; provided that, if the remainder does not exceed Rs. 5, the charge for it shall be only 1 anna; if it does not exceed Rs. 10, the charge for it shall be only 2 annas and if it does not exceed Rs. 15, the charge for it shall be only 3 annas.

Telegraphic money order fees.—The same as the fees for ordinary money orders plus a telegraph charge calculated at the rates for inland telegrams for the actual number of words used in the telegram advising the remittance, according as the telegram is to be sent as an "Express" or as an "Ordinary" message.

In the case of Ceylon the telegraph charge is at the rate of Re. 1 for the first 12 words and 2 annas for each additional word. Telegraphic money orders cannot be sent to Portuguese India.

Value-payable fees.—These are calculated on the amount specified for remittance to the sender and are the same as the fees for ordinary money orders.

Insurance fees.—For every Rs. 50 of insured value 1 anna.

As regards Ceylon and Portuguese India see Foreign Tariff.

Acknowledgment fee.—For each registered article 1 anna.

The Foreign Tariff (which is not applicable to Ceylon except in respect of insurance fees or to Portuguese India except in respect of insurance fees and parcel postage) is as follows:—

Letters.

To the United Kingdom, other British Possessions and Egypt, including the Soudan. } 1½ annas for the first ounce and 1 anna for each additional ounce or part of that weight.

To other countries, colonies or places. } 2½ annas for the first ounce and 1½ annas for every additional ounce or part of that weight.

Postcards Single	1 anna.
„ Reply	2 annas.

Printed Papers.—½ anna for every 2 ounces or part of that weight.

Business Papers.—½ anna for every 2 ounces or part of that weight, subject to a minimum charge of 2½ annas for each packet.

Samples.—½ anna for every 2 ounces or part of that weight, subject to a minimum charge of 1 anna for each packet.

(The rates shown above are those chargeable when the postage is prepaid.)

Parcels.—(Prepayment compulsory.) The rates vary with the countries to which they are addressed. The rates to the United Kingdom are—

	Via Gibraltar.		Overland.	
	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
Not over 3 lbs.	0 12 0	1 8 0	1 8 0	2 4 0
„ „ 7 „	1 8 0	2 4 0	2 4 0	3 0 0
„ „ 11 „	2 4 0	3 0 0	3 0 0	3 0 0

Registration fee.—2 annas for each letter, postcard, or packet.

Money Orders.—To countries on which money orders have to be drawn in rupee currency, the rates of commission are the same as in the case of inland money orders.

To countries on which money orders have to be drawn in sterling, the rates are as follows:—

	Annas.
Not exceeding £ 1	3
Exceeding £1 but not exceeding £2	5
„ £2 „ „ „ £3	8
„ £3 „ „ „ £4	10
„ £4 „ „ „ £5	12
„ £5	12

for each complete sum of £5 and 12 annas for the remainder, provided that if the remainder does not exceed £1, the charge for it shall be 3 annas; if it does not exceed £2, the charge for it shall be 5 annas; if it does not exceed £3, the charge for it shall be 8 annas; and if it does not exceed £4, the charge for it shall be 10 annas.

Insurance fees—

To countries other than those named below .. 3 annas for every £5,
 To Ceylon and Portuguese India 2 annas for every Rs. 100.
 To Mauritius the Seychelles, Zanzibar, and the British East Africa, Uganda; and Somaliland Protectorates 4 annas for every Rs. 100.

Acknowledgment fee.—2 annas for each registered article.

Growth of the Post Office.—At the end of 1897-98 the total number of post offices was 11,742 and the total length of mail lines 126,351 miles. For the 31st March 1919 the corresponding figures were 19,445 and 1,57,395½. During the year 1897-98, the total number of letters, postcards, newspapers and packets given out for delivery was 460,899,344, while for the year 1918-19 the total number of unregistered articles of the same classes given out for delivery plus the number of registered letters and packets posted amounted to 1,180,200,452. The number of parcel mail articles given out for delivery in the former

year was 4,119,781 as compared with 14,264,559 such articles posted during the latter year. The total number and value of money orders issued increased from 11,795,041 and Rs. 24,79,45,455 in 1897-98 to 36,106,940 and Rs. 79,67,82,573, respectively, in 1918-19. During the former year the total number of articles insured for transmission by post was 326,645 with an aggregate declared value of Rs. 10,00,62,590 and the corresponding figures for 1910-11 were 1,169,428 and Rs. 26,88,78,925. As the result, however, mainly of the introduction in 1911-12 of the rule under which inland articles containing currency notes or portions thereof must be insured, the figures for 1918-19 stand at 3,845,189 and Rs. 1,13,26,48,840. The number of accounts open on the books of the Post Office Savings Bank grew from 730,387 on the 31st March 1898 to 1,677,407 at the end of 1918-19; with an increase from Rs. 9,28,72,978 to Rs. 18,82,44,749 in the total amount standing at the credit of depositors. The total staff on the 21st March 1919 numbered 99,074. The net financial result of the working of the Post Office for the year 1918-19 was a surplus of Rs. 38,02,465.

This account of the activities of the Post Office would not be complete if it were not mentioned that on the 31st March 1919 there were 27,810 active Postal-Life Insurance policies with an aggregate assurance of Rs. 3,96,39,610 and that during 1918-19 it disbursed a sum of Rs. 56,46,718 to Indian Military pensioners; sold over 3 crores of cash certificates to the public; collected at its own expense a sum of Rs. 24,70,410 on account of customs duty on parcels and letters from abroad; and sold 11,844 lbs. of quinine to the public.

TELEGRAPH DEPARTMENT.

Telegraphs.—Up to 1912 the telegraph system in India was administered as a separate department by an officer designated Director-General of Telegraphs who worked in subordination to the Government of India in the Department of Commerce and Industry. In that year it was decided to vest the control of Posts and Telegraphs in a single officer as an experimental measure with a view to the eventual amalgamation of the two Departments.

In pursuance of this policy an experimental amalgamation of the two services was introduced in the Bombay and Central Circles from the 1st July 1912. The fundamental principles of this scheme which followed closely the system in force in the United Kingdom and several other European countries were that the traffic and engineering work of the Telegraph Department should be separated, the former branch of work in each Circle being transferred to the Postmaster-General assisted by a Deputy Postmaster-General and a suitable number of attached officers and the engineering branch being controlled by a Director of Telegraphs in charge of the two Circles. Subordinate to this

officer there were several Divisional Superintendents who were assisted by a number of attached officers.

In 1914 the complete amalgamation of the two Departments was sanctioned by the Secretary of State and introduced from 1st April. The superior staff of the Direction, in addition to the Director-General himself, consists on the engineering side of a Chief Engineer, Telegraphs, with an Assistant, and a Personal Assistant to the Director-General. For traffic work there are a Deputy Director-General, with an Assistant and an Assistant Director-General. In the Circles the scheme which has been introduced follows closely on the lines of the experimental one referred to above. For telegraph engineering purposes India is divided up into three Circles, each in charge of a Director of Telegraphs. For Burma special arrangements were considered necessary and the engineering work is in charge of the Post Master-General who is a Telegraph officer specially selected for the purpose. These four Circles are divided into twenty Divisions each of which is in charge of a Superintendent of Telegraph Engineering.

The telegraph traffic work is under the control of the Postmasters-General, each of whom is assisted by a Deputy Postmaster-General and a suitable staff of attached officers.

The audit work of the Telegraph Department is, like that of the Post Office, entrusted to the Accountant-General, Posts and Telegraphs, assisted by a staff of Deputy and Assistant Accountants-General.

Inland Tariff.—The tariff for inland telegrams is as follows:—

Private and State.

Ex-press.	Ordinary.
Rs. a.	Rs. a.

Minimum charge	.. 1 8 0 12	} Address charged for.

Each additional 6 words over 48	.. 0 2 0 1	

Ceylon.

Ceylon is not regarded as "Inland" but Portuguese India is.

The following communique was issued by the Government of India on 6th January 1919:—Consequent on the recent revision of the Indian inland telegraph rates, the Government of India, in consultation with the Government of Ceylon, have had under consideration the question of the rates for telegrams exchanged between India and Ceylon. They have now decided with the concurrence of the Colonial Government that from the 1st of February, 1919, there should be an ordinary service for private

and State telegrams and telegraphic money orders at the existing rates. An ordinary private telegram to Ceylon will, therefore, be charged for at the rate of one rupee for twelve words, with two annas for each additional word. To meet the requirements of those members of the public who desire special telegraph facilities, an express service will also be introduced from the same date at the rate of two rupees for twelve words, with three annas for each additional word. No change will be made in the existing rates for press telegrams to Ceylon.

Foreign Tariff.—The charges for foreign telegrams vary with the countries to which they are addressed. The rates per word for private and state telegrams to all countries in Europe except Russia and Turkey are as follows:—

	Private.	State.
	Rs. a.	Rs. a.
Via Turkey (<i>Suspended</i>)	.. 1 6
;; Indo (<i>Suspended</i>)	.. 1 4	0 12
;; Eastern	1 4 0 10

Growth Telegraphs.—At the end of 1897-98 there were 50,305 miles of line and 155,088 miles of wire and cable, as compared with 87,814 and 357,472 miles, respectively, on the 31st March 1919. The numbers of departmental telegraph offices were 257 and 185, respectively, while the number of telegraph offices worked by the Post Office rose from 1,634 to 3,368. The increase in the number of paid telegrams dealt with is shown by the following figures:—

		1897-98.	1918-19.
Inland	{ Private	.. 4,107,270	15,878,590
	{ State	.. 860,382	2,047,950
	{ Press	.. 35,910	225,559
Foreign	{ Private	.. 735,679	2,000,775
	{ State	.. 9,896	139,018
	{ Press	.. 5,278	36,176
		<hr/>	<hr/>
		5,754,415	20,328,068

The outturn of the workshops during 1917-18 represented a total value of Rs. 13,58,000. At the end of the year the total staff numbered 10,960. The total capital expenditure up to the close of 1917-18 amounted to Rs. 13,32,55,339. The net revenue for the year was Rs. 1,19,62,299.

Wireless.—The total number of wireless telegraph stations open for traffic at the end of 1918-19 was twenty, viz., Port Blair, Rangoon, Diamond Island, Table Island, Victoria Point, Madras, Bombay, Sandheads, Calcutta, Karachi, Delhi, Simla, Allahabad, Lahore, Nagpur, Peshawar, Quetta, Secunderabad, Maymyo and Mhow.

Telephones.—On the 31st December 1918 the number of telephone exchanges established by the Department was 241 with 7,086 connections. Of these exchanges, 61 were worked departmentally. The number of telephone exchanges established by Telephone Companies was 13 with 15,653 connections.

Scientific Surveys.

The Botanical Survey is under the direction of the Superintendent of the Royal Botanic Garden, Calcutta, with whom are associated the Economic Botanists belonging to the Agricultural Department. In 1912 the post of Reporter on Economic Products was abolished and replaced by that of Economic Botanist to the Botanical Survey. Much of the systematic botanical work of India is done for the Department by forest officers and others. Over 2,000 specimens were obtained in 1911-12 by the officer deputed to accompany the Abor Expedition as botanist, and a material addition was made to the information available as to the vegetation of the little-known frontier region traversed.

Geological Survey.—The first object of the Department is the preparation of a general geological map of India. Various economic investigations, which form an increasingly important part of the Department's work, are also conducted. These include investigation of marble and sandstone quarries for the purpose of building Imperial Delhi, the examination of the Korea coal-field in the Central Provinces, of petroliferous localities in the Punjab and North-West Frontier Province, of pitchblende areas in the Gaya District, &c.

Zoological Survey.—A scheme for the formation of a Zoological Survey on the basis of the Zoological and Anthropological Section of the Indian Museum, Calcutta, came into force in July, 1916. The proposals as sanctioned by the Secretary of State mainly are as follows:—The headquarters of the Survey will be the Indian Museum. The scheme regarding the Zoological Survey entails the breaking up of the organisation now known as the Zoological and Anthropological Section of the Indian Museum into two parts, one of which will become a Government department under the title of the Zoological Survey of India, and will be primarily concerned with zoological investigation and exercise such advisory functions as may be assigned to it by Government, while the other part will remain as the office of the Trustees of the Indian Museum and will be organised for the present on the lines laid down in the existing by-laws of the Museum. It will be the duty of the Zoological Survey to act as guardians of the standard zoological collection of the Indian Empire, and as such to give every assistance in their power both to officials and to others, in the identification of zoological specimens submitted to them, arranging, if requested to do so, to send collections to specialists abroad for identification in cases in which no specialist is available in India. The Director of the Survey is Dr. Anandale.

Mammal Survey.—An important movement has recently been inaugurated by the Bombay Natural History Society which has collected subscriptions for a survey of the mammals of India. This Survey was begun in 1911 with the object of getting together properly prepared specimens of all the

different kinds of Mammals in India; Burma and Ceylon so that their distribution and differences might be more carefully worked out than had been done before, also to form as complete as possible a collection of specimens for the Society's Museum in Bombay. Before the Survey started the Society had a very small collection, and even in the British Museum in London the Indian specimens were very poorly represented. Three trained collectors from England are in the service of the Society and the specimens obtained by the Survey are being worked out at the British Museum and duplicates presented to the different Indian Museums. In India most of the country has been worked on the West Coast from Coorg as far north as Mount Abu, also the Central Provinces, Kumaon and Bengal. The whole of Ceylon has been worked, and so has a considerable part of Burma. At the present time owing to the war only one collector is in the field in Sikkim, the others having been on service. Funds for the Survey were raised by subscription from the principal Native Chiefs and some prominent Bombay citizens together with grants from the Government of India, the Government of Ceylon, the Government of Burma, the Government of the Malay States, and the different local Governments as well as donations from the Royal Society, the British Museum and the Zoological Society of London.

The Board of Scientific Advice.—This Board includes the heads of the Meteorological, Geological, Botanical, Forest, and Survey Departments, representatives of the Agricultural and Civil Veterinary Departments, and other scientific authorities whose special attainments may be useful. It was established in 1902 to co-ordinate official scientific inquiry, to ensure that research work is distributed to the best advantage, and to advise the Government of India in prosecuting practical research into those questions of economic or applied science on the solution of which the agricultural and industrial development of the country so largely depends. The programmes of investigation of the various departments are annually submitted to the Board for discussion and arrangement, and an annual report is published on the work done.

The Secretary to the Government of India (Department of Revenue and Agriculture) is *ex-officio* President of the Board which includes the Director-General, of Observatories, the Director of the Zoological Survey, the Surveyor-General of India, the Principal, Punjab Veterinary College, the Director of the Indian Institute of Science, the Inspector-General of Forests, the Agricultural Adviser to the Government of India, the Director of the Geological Survey, the Director-General, Indian Medical Service, the Secretary to the Government of India, Public Works Department, and the Director of the Botanical Survey of India who is Secretary to the Board of Scientific Advice.

The Programme of the scientific departments for 1919-20 includes the following. The Meteorological department will organise upper air observatories in various places in connexion with the proposed air services. The Kodaikanal Observatory will investigate the displacement of solar lines, the spectrum of Venus, and solar rotation. The Survey of India expects to commence meteorological work and will continue its magnetic work. The Geological Survey of Bihar, Orissa, the Central Provinces and Burma will be continued and enquiries into Wolfram and tin in Tenasserim, Sulphur and Chromite in Baluchistan and Seistan and Mica in Bihar and Orissa will be taken up, and research made into Gondwana fossil plants and fossils from Sind, Baluchistan, the North-West Himalayas and Burma. From shortage of staff the work of the Botanical and Zoological Surveys will be much curtailed but it is hoped that Cinchona work will be extended and that the survey of the fresh water molluscs of India and the investigation of the Chilka Lake fishes and Indian Diptera will be continued. Under Forestry the technical and physical properties and the actual and potential uses of Indian timber for numerous purposes, the antiseptic treatment of timber, material for paper pulp, fibres, gums, oleo-resins, the fungal diseases and insect pests of forest trees, the culture of various species of trees of economic importance, and the chemistry of various forest products will form subjects for investigation. Under Agriculture, the chemical investigation of drainage water from fallow and cropped soils, of alkali soils, of green manures, of "windrowing" on sugar cane; the botanical study of wheat, tobacco, fibre plants, cotton, indigo, fodder crops and fruit; the fungal diseases of jute, sugarcane, rice, rubber, etc.; the insect pests of sugar, rice, cotton, fruit trees, and stored grain, insect control and the bionomics of blood sucking insects, the bacteriology of Indian soils, the bacteriology and chemistry of Indigo, experimental work in practical agriculture and the diseases of farm stock, will be the chief subjects of investigation.

The Indian Research Fund.—Scientific research work is rapidly developing in India. In 1911 the sum of 5 lakhs (£33,000) out of the surplus opium revenue was set aside as an endowment for research into epidemic diseases in connection with the Central Research Institute, at Kasauli. It was hoped that this sum might be largely augmented by private subscriptions. An Indian Research Fund Association was constituted, and a good deal of work has already been undertaken. Its objects are defined as "the prosecution and assistance of research, the propagation of knowledge and experimental measures generally in connection with the causation, mode of spread and prevention of communicable diseases." Fresh investigations into kala azar and cholera have been inaugurated, and an officer was deputed, at the expense of the Fund, to study yellow fever in the regions where it is endemic, with a view to taking steps to prevent its introduction into India. A further grant of 6 lakhs (£40,000) was made to the Central Research Fund from the opium surplus of 1911-12. It has been decided to devote to research and anti-malarial projects

5 lakhs (£33,000) a year from Imperial revenues commencing in 1913-14. A new periodical, "The Indian Journal of Medical Research," was instituted in 1913 and is published four times annually, as the official organ of the Research Fund. The journal deals with every branch of research directly or indirectly connected with medical and sanitary science, and forms a record of what is being done in India for the advance of this work. For the year 1917-18 the Board recommended the continuance on the existing lines of the following inquiries:—Beri Beri by Lieutenant-Colonel McCarrison; Leprosy by Dr. Sudhamoy Ghosh; Hook-worm by Dr. K. S. Mhaskar; Plague Prevention by Dr. G. D. Chitre; Entomological by Mr. Awati and Mr. Mitter. A grant has been made to Lieut.-Col. Glen Liston for experiments with hydro-cyanic acid gas as a disinfectant.

Survey of India.—The work of the Survey of India Department falls under various heads, namely, the trigonometrical survey, topographical and forest surveys, special surveys and explorations, and map production. Cadastral surveys are now carried out by the Provincial Land Records and Settlement Departments.

In 1904 attention was drawn to the defective state of the **topographical survey maps**, and a Committee was appointed to report on the subject. To overtake the arrears of revisional survey and to secure that the map of India should be brought up to date and revised at proper intervals, they recommended a considerable increase of establishment and an increased expenditure of £210,000 a year for the next 25 years. They also made recommendations for altering the size and improving the quality of the maps. After further inquiry the Government of India decided that a scale of 1 inch to the mile would ordinarily be sufficient, reserved forests and special areas being surveyed on the scale of 2 inches to the mile, and the $\frac{1}{2}$ -inch scale employed for waste and barren tracts.

Indian Science Congress.

The Indian Science Congress was founded largely owing to the effects of Dr. J. L. Simonsen and Mr. P. S. Macmahon, the present Honorary General Secretaries of the Congress. The Asiatic Society of Bengal undertakes the management of the Congress finances and publishes annually the Proceedings of the Congress. The objects are (1) to encourage research and to make the results generally known among science workers in India, (2) to give opportunities for personal intercourse and scientific companionship and thus to overcome to some extent one of the chief drawbacks in the life of workers in science in India, (3) to promote public interest in science; for this end the Congress is held at different centres annually, and evening lectures open to the public form an important part of the proceedings of each Congress.

The Congress meets in January each year; the proceedings last for six days. The Head of the Local Government is Patron of the Congress; the Congress session is opened by a Presidential Address delivered for the President for the year. The President is chosen annually,

the different sections being represented in turn. The sections are (1) Agriculture (2) Physics and Mathematics, (3) Chemistry, and Applied Botany, (4) Zoology and Ethnography, (5) Botany, (6) Geology, (7) Medical Research. When the sections meet separately each section is presided over by its own President also chosen annually. The mornings are devoted to the reading and discussion of the papers, the afternoons to social functions and visits to places of interests; in the evenings public lectures are delivered.

Government officers whose services can be spared will be granted special leave to attend the Congress and can recover, through the usual channels, the actual train fare paid by them to and from the Congress—(See Circular Letter from the Government of India, Department of Revenue and Agriculture (General) No. 10171, dated 17th August 1916, embodied in Bombay Government, Education Department, Order No. 2324, dated 14th September 1916).

The seventh annual meeting of the Indian Science Congress will be held in Nagpur from January, 13th to 18th, 1920. His Honour Sir Benjamin Robertson, K.C.S.I., K.C.M.G., C.I.E.,

LL.D., I.C.S., Chief Commissioner, Central Provinces, patron of the meeting, and Sir P. C. Ray, Kt., will be president. It is requested that all who wish to attend the meeting will communicate as early as possible with J. L. Simonsen, Esq., Honorary-General Secretary, Forest Research Institute and College, Dehra Dun. The subscription to the Congress will be Rs. 5 and should be paid to the Honorary Treasurer, Asiatic Society of Bengal, 1, Park Street, Calcutta.

The Honorary Local Secretaries will be M. Owen, Esq., College of Science, Nagpur, and V. Bose, Esq., Nagpur, to whom all enquiries as to accommodation should be addressed. It is particularly requested that very early intimation of the accommodation required should be sent to the Honorary Local Secretaries. The following sectional Presidents have been appointed:—Agriculture, Mr. D. Clouston; Physics and Mathematics, Dr. N. F. Moos; Chemistry, Mr. B. K. Singh; Botany, Mr. P. F. Fyson; Zoology, Mr. E. Vicedenburg; Geology, Mr. P. Sampatiengar; Medical Research, Lt.-Colonel J. W. Cornwall, I.M.S.

THE IMPERIAL INSTITUTE.

The Imperial Institute, South Kensington, has been placed by the Imperial Institute (Management) Act of 1916 under the control of the Secretary of State for the Colonies as representing the central authority for the Dominions, Colonies, and Protectorates of the Empire. The actual management of the Institute will be with an executive council of twenty-five members, which, subject to the general control of the Secretary of State for the Colonies, will possess considerable autonomy and will be the governing body of the Institute. India is to be represented on this council by four members, one nominated by the Government of India, two by the Secretary of State for India, and one by the Secretary of State for the Colonies. In addition, it is understood that there will be a special Indian Committee of the Council with co-opted members—an arrangement which will greatly increase the connection of the Institute with Indian interests and, it is hoped, will promote the development of those activities of the Institute for India which are most needed in England.

An account of the work done by the Institute for India, by Dr. W. R. Dunstan, Director of the Imperial Institute, has lately been published in the *Bulletin* of the Institute.

The **Indian Collections** of the Imperial Institute, which have been completely reorganised in recent years, constitute the Indian Section of the Public Exhibition Galleries. They include a representation of the important raw materials of India, illustrations of its chief industries and their results, tabular information and diagrams respecting Indian trade and commerce, maps, pictures, and photographs

of its cities and industries.

Technical Information Bureau.—Ever since the Scientific and Technical Research Department was started, a most important part of its work has been, in addition to conducting researches, to collect and critically collate all published information respecting the production and industrial uses of raw materials, and it has gradually come to be recognized as a central clearing-house for information of this character. Merchants and manufacturers in England, as well as producers in India and the Colonies, have applied in increasing numbers for information on these subjects. In order to be in a position to deal more effectively with such enquiries, a special branch of the department was formed in 1914, whose business it is, in collaboration with the staff of the Scientific and Technical Research Department, to collect and distribute technical information. Since the war this branch, known as the Technical Information Bureau, has been very full of work, and has not only dealt with a large number of inquiries as to Indian materials and their possibilities, but has taken the initiative with British manufacturers and merchants in bringing to their notice important Indian materials which await a new market.

The Institute has a library and map rooms, which are important auxiliaries to this work and publishes quarterly the *Bulletin* which has played a conspicuous part in making known throughout the Empire the results of researches conducted at the Institute, and the records of progress in the various aspects of the production and utilisation of commercial and economic materials.

The Public Trustee.

The **Public Trustee of England** is a Government Official created by Statute (Public Trustee Act, 1906), whereby the State acts as an executor or as a trustee under Wills, and as a trustee under Settlements, whether these instruments are new or old, and in other offices of an analogous character.

The office has been a great success; in the seven years that it has been open the value of the trusts in course of administration have amounted, in round figures, to £50,000,000, while the estimated value of Wills lodged in the Department which have yet to mature is put at some £59,000,000, showing a total value of business of all kinds negotiated at £110,000,000.

Fees chargeable.—The office is now entirely self-supporting and is no charge upon the tax-payer. A provision of the Statute declares that the Office is to make no profit but to charge only such fees as may provide the working expenses and constitute a reserve fund against the liabilities assumed by the State for breach of trust. In accordance with this mutual principle the fees have already been reduced from their original scale, and the cash surplus of fees over expenses, regarded as the nucleus of a reserve fund for all contingencies, is now £14,585.

The main fees are of two kinds—a fee on capital and a fee on income. The fees on capital are taken in two instalments—an instalment of half taken at the beginning, and another instalment of half taken at the end of a trust—each instalment being calculated at the following rates:—

On the first £1,000, fifteen shillings per cent.

On the excess of £1,000 to £20,000, five shillings per cent.

On the excess of £20,000 to £50,000, two shillings and six pence per cent.

On the excess of £50,000, one shilling and three pences per cent. The **Fee on income** is one per cent. if, as is usual, the income be paid direct from its source to the person entitled, on any income in excess of £2,000 a year the fee is only $\frac{1}{2}$ per cent. Where the income is paid through the Department then the fee is two per cent. up to £500 a year, and one per cent. on any excess of £500 a year, and $\frac{1}{2}$ per cent. on income in excess of £2,000 a year. The fee on investment is $\frac{1}{2}$ per cent.; the Public Trustee, out of this fee paying the brokerage. There is power to vary these fees to meet the peculiar circumstances of special cases; but owing to the low range of the fees, and their mutual character the power of reduction is but seldom exercised, except perhaps in the case of large trusts.

The Department has been organised upon lines followed by commercial organisations. Forms are avoided wherever possible, the methods of the Office prescribing prompt attention to all matters within the day.

The particulars of any trust in which it is desired that the Public Trustee should act may be brought to his notice by letter or by personal interview, and upon his assent being obtained, his appointment should be effected in the ordinary way as in the case of private trustees. In the case of a Will about to be made, his appointment can be secured by the simple provision "I appoint the Public Trustee of England as the executor and trustee of this my Will."

One of the forms of trusteeship which would appeal to English people residing in India is a scheme known as a "**Declaration of Trust.**" An official pamphlet explains that the Public Trustee's services have been requested by people who, either because of professional or business pre-occupation, or from want of experience in dealing with money matters, or from the disadvantages which might attach to Governmental, professional or business disabilities abroad, are not well placed to select and supervise their investments. It would appear that the services of the Department in this matter were first requisitioned by officers taking up appointments in India; and, following out their request for individual assistance, this scheme of trust came to be devised, and has been found to commend itself to the circumstances of a very large circle of persons similarly disadvantaged. A Declaration of Trust is an **inexpensive form of trusteeship** by virtue of which the owner practically retains full control over his capital. The property is made over to the Public Trustee either in the form of money to be invested or specific securities transferred into his name; and thereupon the Public Trustee executes a short "declaration" setting out that he holds the money invested or the securities in trust for the transferor. The result of this is that income, as it accrues, is paid to the owner or to any beneficiary as he may direct. A wide field of investment is permissible, as the trust provides that the funds may be invested as the owner may from time to time direct. As the pamphlet sets out interest at the rate of at least 4 per cent. is to be looked for under the scheme from investments of a non-speculative character. It should be understood that this form of trusteeship is not analogous to a bank deposit, where the return of the capital at par, given the solvency of the bank, is expected. Investments are selected with the greatest care in consultation with the owner, but it must be understood that the Public Trustee does not accept responsibility for any fluctuation of any of the investments chosen. The fees payable for this scheme of trusteeship, so far as the capital fees are concerned, are half those payable in the case of an ordinary settlement. The other fees are the same as the ordinary fees.

The appointment of the Public Trustee secures certain definite advantages inasmuch as he is by Act of Parliament a Corporation Sole; and thus it is said the Public Trustee never dies, so that the expense of appointment of other Trustees is permanently avoided. His

integrity is guaranteed by the State, while the measure of his success would indicate that he is necessarily experienced and skilled in his duties.

Close personal attention is given by the Public Trustee and his senior officers to the details of every trust; and as regards the work of investment, a large organisation has been set up to give the best consideration not only to the selection of investments but to the duty of keeping them under frequent observation.

An **Advisory Committee** of men of recognised authority has, in the past year, been appointed by the Lord Chancellor to assist the Public Trustee by a quarterly review of the investments made. In the last Annual Report the Public Trustee speaks of having secured a return of £3-19-4 per cent. upon his trustee investments and a return of £4-10-1 per cent. upon his non-trustee investments.

The success of the Department would seem to show that there is a widespread public need in England for such an Office, and the energy and efficiency with which the Department has been constituted and conducted has been a great factor in commending it to the public. The State Guarantee is also doubtless a factor of great importance. A statutory rule pro-

vides that strict secrecy shall be observed in respect of all trusts administered in the Department.

The administration is subject to an **audit** by the Controller and Auditor-General (the Government Auditor), while the internal organisation has been built up upon the principle of a check and counter-check upon the administration.

An important section of the Statute gives the Public Trustee power to direct an audit and investigation of the condition and accounts of any trust.

Officials in India will doubtless tend to make an increasing use of the Department. As a Government Office, its stability will commend itself to them as a medium to safeguard their interests under Wills or Settlements which can be entirely relied upon, and free from the risks and expense attendant upon any other forms of trusteeship.

Further information upon details and copies of the official pamphlet, reports and rules, etc., can be obtained of the official agents to the Department, *viz.*—Messrs. King, Hamilton & Co., Calcutta and in Bombay, Messrs. King, King & Co., whose head office is Messrs. Henry S. King & Co., 65, Cornhill, London, E. C.

THE ADMINISTRATOR-GENERAL.

In India the functions of a Public Trustee are divided in each Province between two officials, the Administrator-General and the Official Trustee.

The office of **Administrator-General** was first constituted by Indian Act VII of 1849. There were several later enactments on the subject, all of which have ceased to be in force. The present law is to be found in Indian Act III of 1913, which contains the following provisions:—There are three Administrators-General in each of the Presidencies of Bengal, Madras, and Bombay. Their combined jurisdiction covers the whole of British India. The Administrator-General is entitled to letters of administration, when granted by a High Court, unless they are granted to the next of kin. In the other Courts he is entitled to letters in preference to a creditor, a legatee other than a universal legatee, or a friend of the deceased.

If any person who is not an Indian Christian, a Hindu, Mohammedan, Persian, Buddhist dies leaving within any Presidency assets exceeding the value of Rs. 1,000 and if no person to whom any Court would have jurisdiction to commit administration of such assets has, within one month from his death, applied in such Presidency for probate or letters of administration, the Administrator-General is required to apply for letters of administration. In case of apprehended danger of misappropriation, deterioration, or waste of assets left by the deceased in the towns of Calcutta, Madras, and Bombay, the High Courts may direct the Administrator-General to apply for letters of administration. He can also be required to collect and hold assets until a right of succession or administration is determined. Probate and letters of administration granted to an Administrator-

General have effect throughout the Presidency, but the High Court can direct that they have effect throughout one or more of the other Presidencies. A private executor or administrator may with the assent of the Administrator-General transfer the assets of the estate to the Administrator-General. There are provisions in the Act with regard to the revocation of grants and the distribution of assets. When the assets do not exceed Rs. 1,000 in value, the Administrator-General may, when no probate or letters of administration have been granted, give a certificate to a person, claiming otherwise than as a creditor to be interested in such assets, entitling him to receive the assets. There is also power in certain events to give such certificate to a creditor. There is a further power to send the residue of the assets to the country of domicile of the deceased. The Government of India is required by the Act to make good all sums for which the Administrator-General would be personally liable if he had been a private administrator, except where the Administrator-General and his officers have in no way contributed to the liability.

Fees both on capital and on income are payable out of the estates taken charge of by the Administrator-General. The fees on capital vary from 3 per cent. on the gross value in the case of small estates to 2 per cent. in the case of large estates. The fees on income vary in the case of moveable property from 2 per cent. to 3 per cent., and in the case of immovable property from 3 per cent. to 5 per cent. When the Court has directed the Administrator-General to collect and hold the assets a fee of 1 per cent. on the value of the assets taken possession of, collected, realised, or sold is payable. A small fee is also payable in cases where the

Administrator-General grants a certificate. the Administrator has power to reduce the fees to one-half.

Official Trustee.—The office of Official Trustee dates from the year 1843. By Indian Act XVII of that year the Supreme Court had power to appoint the Registrar or other officer of the Court to be a trustee, where there was no trustee willing to act. Act XVII of 1843 was repealed by Act XVII of 1864, which was in its turn repealed by Act II of 1913, which contains the present law on the subject. There are three Official Trustees. The Official Trustee of Bengal has powers in the greater part of India. The powers of the Official Trustee of Bombay extend to the Bombay Presidency and the Province of British Baluchistan; those of the Official Trustee of Madras extend to the Madras Presidency and the Province of Coorg. The Government can appoint Deputy Official Trustees.

An Official Trustee can (a) act as an ordinary trustee, (b) be appointed trustee by a Court of competent jurisdiction. He has, except as otherwise provided, the same powers, duties,

and liabilities as ordinary trustees. He may decline any trust. He may not accept any trust under any composition or scheme of arrangement for the benefit of creditors, nor of any estate known or believed by him to be insolvent. He cannot accept a trust for a religious purpose, or for the management or carrying on of any business. He cannot administer the estate of a deceased person unless he be sole executor and sole trustee under the will. He cannot be appointed trustee along with any other person. With his consent he may be appointed trustee in the instrument making the trust, and he may accept a trust contained in a will. When property is subject to a trust, and there is no trustee within the jurisdiction willing or capable to act, the High Court may appoint the Official Trustee as trustee. He may also be appointed a trustee by the surviving or continuing trustees of a trust, and all persons beneficially interested therein.

As in the case of an Administrator-General, the Government of India is responsible for the acts or defaults of an Official Trustee. Fees are payable at rates fixed by the Government.

PROVING OF WILLS.

In British India if a person has been appointed executor of the will of a deceased person, it is always advisable to prove the will as early as possible. If the will is in a vernacular it has to be officially translated into English. A petition is then prepared praying for the grant of probate of the will. All the property left by the deceased has to be disclosed in a schedule to be annexed to the petition. The values of immoveable properties are usually assessed at 16½ years purchase on the nett Municipal assessment. For estate under Rs. 10,000 the probate duty payable is 2%; between Rs. 10,000 and Rs. 50,000 the duty payable is 2½%. Over 50,000 rupees the duty payable is 3%. In determining the amount of the value of the estate for the purposes of probate duty the following items are allowed to be deducted:—

1. Debts left by the deceased including mortgage encumbrances.
2. The amount of funeral expenses.
3. Property held by the deceased in trust and not beneficially or with general power to confer a beneficial interest.

The particulars of all these items have to be stated in a separate schedule. It is the practice of the High Court to send a copy of these schedules to the Revenue authorities and if the properties particularly immoveable properties have not been properly valued, the Revenue department require the petition to be amended accordingly. In certain cases the Court then requires citations to be published and served on such persons as the Court thinks are interested in the question of the grant of probate. If no objection is lodged by any person so interested within 14 days after the publication or service of citation and if the will is shown to have been properly executed and the petitioner entitled to probate, probate is ordered to be granted.

Freemasonry in India.

In 1728 a deputation was granted by the Grand Lodge of England to Geo. Pomfrett, Esq., authorising him to "open a new Lodge in Bengal." Of this personage nothing further is known but under Capt. Farwinter, who in the following year succeeded him as Provincial Grand Master of India, Lodge was established in 1730, which in the Engraved Lists is distinguished by the arms of the East India Company, and is described as "No. 72 at Bengal in the East Indies." The next Provincial Grand Masters were James Dawson and Zech. Gee, who held office in 1740; after whom came the Hon. Roger Drake, appointed 10th April 1755. The last named was Governor of Calcutta at the time of the attack made on the settlement by Surajah Dowlah in 1756. Drake missed the horrors of the Black Hole by escaping and was accused of deserting his post, but, though present at the retaking of Calcutta by Admiral Watson and Clive, it is improbable that he resumed the duties of his masonic office after the calamity that befell the settlement.

The minutes of the Grand Lodge inform us that William Mackett, Provincial Grand Master of Calcutta, was present at the meeting of that body November 17th, 1760, and we learn on the same authority that at the request of the "Lodges in the East Indies" Mr Cullin Smith was appointed P. G. M. in 1762. At this period it was the custom in Bengal "to elect the Provincial Grand Master annually by the majority of the votes of the members present, from amongst those who passed through the different offices of the (Prov.) Grand Lodge and who had served as Dep. Prov. Grand Master." This annual election as soon as notified to the Grand Lodge of England was confirmed by the Grand Master without its being thought an infringement of his prerogative. In accordance with this practice, Samuel Middleton was elected (P. G. M. circa) in 1767; but in passing it may be briefly observed that a few years previously a kind of roving commission was granted by Earl Ferrars in 1762-64 to John Bluvitt, Commander of the "Admiral Watson," Indian "for East India where no other Provincial Lodge is to be found." Middleton's election was confirmed October 31st, 1768, and, as the dispensation forwarded by the Grand Secretary was looked upon as abrogating the practice of annual elections, he accordingly held the office of D. G. M. Unfortunately the records of the P. G. L. date back only to 1774, and thus much valuable information is lost to us. This Grand Lodge continued working until 1792 when it ceased to meet. It seems that the officers were selected from only two Lodges much to the dissatisfaction of the other Lodges, and resulted in most of the dissatisfied bodies seceding and attaching themselves to the Athol of Ancient Grand Lodge. In 1813 at the Union both the Ancients and Moderns in Calcutta combined and gave their allegiance to the **United Grand Lodge of England** and have since been working peaceably under the Provincial Grand Lodge of Bengal which was revived in that year and in 1840 created a District Grand Lodge.

Madras.—The earliest Lodge in Southern India (No. 222) was established in Madras in 1752. Three others were also established about 1766.

In the same year Capt. Edmund Pascal was appointed P. G. M. for Madras and its Dependencies and in the following year another Lodge was established at Fort St. George. In 1768 the Athol (or Ancients) invaded this District and in 1782 established a Provincial Grand Lodge and both these Provincial Grand Bodies continued working peaceably side by side until the union. Indeed, though not generally known, these two Grand Bodies made an attempt at coalition long before any such movement was made by their parent bodies, the Grand Lodge of England, and the Ancient Grand Lodge, and Malden in his History of Freemasonry in Madras states that in a great measure they succeeded. At the Union in 1813 all the bodies in Madras gave their allegiance to the United Grand Lodge. One event worthy of note was the initiation in 1776 at Trichinopoly of the eldest son of the Nawab of Arcot, Undat-ul-Amari, who in his reply to the congratulations of the Grand Lodge of England stated "he considered the title of English Mason as one of the most honourable that he possessed." This document is now stored in the archives of the United Grand Lodge.

Bombay.—Two Lodges were established in this Presidency during the 17th century, Nos. 234 at Bombay in 1758 and 569 in Surat in 1798, both of which were carried on the lists until the union when they disappeared. A Provincial Grand Master, James Todd, was appointed but there is no record that he exercised his functions and his name drops out of the Freemasons' Calendar in 1799. In 1801 an Athol Warrant was granted (No. 322) to the 78th foot which was engaged in the Maratha War under Sir Arthur Wellesley. In 1818 Lord Moria was asked to constitute a Lodge to be known by the name of St. Andrew by eight Masons residing there and also to grant a dispensation for holding a Provincial Grand Lodge for the purpose of making the Hon. Mountstuart a Mason, he having expressed a wish to that effect. The Petitioners further requested "that his name might be inserted in the body of the warrant, authorising them to instal him after being duly passed and raised a Deputy Grand Master of the Decan. Of the reply to this application no copy has been preserved. Lodge Benevolence was established in Bombay in 1822.

In 1823 a Military Lodge "Orion-in-the-West" was formed in the Bombay Artillery and installed at Poona as No. 15 of the coast of Coromandel. It seems from Lane's records that in 1830 it was discovered that this Lodge was not on the records of the United Grand Lodge of England. A Warrant was subsequently issued bearing date 19th July 1833. According to the early proceedings of this Lodge, members were examined in the Third Degree and passed to the chair in the Fourth Degree for which a fee of three gold mohurs was charged. In the following year a second Lodge was established at Poona by the Provincial Grand Lodge of Bengal which however left no trace of its existence. In 1825 the civilian element of "Orion" seceded and formed the "Lodge of Hope" also at Poona No. 802.

Here "Orion" unrecognized at home, aided in the secession of some of its members, who ob-

tained a warrant, on the recommendation of the parent Lodge, from the Grand Lodge of England. Two years later it was discovered that no notification of the existence of "Orion in-the-West" had reached England, nor had any fees been received, although these including quarterages had been paid into the Provincial Grand Lodge, Coast of Coromandel. It was further ascertained that in granting a warrant for a Bombay Lodge the Provincial Grand Master of Coromandel had exceeded his powers. Ultimately a new warrant No. 598 was granted as already stated in 1833. Lodge "Perseverance" was started in Bombay No. 818 in 1828. Up to this time the jurisdiction of the Grand Lodge of England in India had not been invaded; but in 1836 Dr. James Burnes was appointed by the Grand Lodge of Scotland, P. G. M. of Western India and its Dependencies. No Provincial Grand Lodge however was formed until 1st January 1838. A second Scottish Province of Eastern India was started which on the retirement of the Marquis of Tweedale was absorbed within the jurisdiction of Dr. Burnes, who in 1846 became Provincial Grand Master for all India (including Aden) but with the proviso, that this appointment was not to act in restraint of any future sub-division of the Presidencies. Burnes may be best described as being in 1836, in ecclesiastical phrase as a Provincial Grand Master "in partibus infidelium" for whatever Lodges then existed throughout the length and breadth of India were strangers to Scottish Masonry. But the times were propitious. There was no English Provincial Grand Lodge in Bombay and the Chevalier Burnes, whom nature had endowed with all the qualities requisite for Masonic Administration, soon got to work and presented such attractions to **Scottish Freemasonry** that the strange sight was witnessed of English Masons deserting their mother Lodges, to such an extent that these fell into abeyance, in order to give support to Lodges newly constituted under the Grand Lodge of Scotland. In one case indeed, a Lodge "Perseverance" under England went over bodily to Scotland, with its name, jewels, furniture, and belongings, and the charge was accepted by Scotland. This Lodge still exists in Bombay and now bears No. 333 on the Register of Scotland. From this period, therefore, Scottish Masonry flourished, and English Masonry declined until the year 1848 when a Lodge St. George No. 807 on the Rolls of the Grand Lodge of England was again formed at Bombay, and for some years was the solitary representative of English Masonry in the Province. In 1844 Burnes established a Lodge "Rising Star" at Bombay for the **admission of Indian gentlemen** the result of which is seen at the present day. Thus the seed planted at Trichinopoly in 1776 by the initiation of Andat-ul-Amari has borne fruit, resulting in the initiation of thousands of Indian gentlemen of all castes and creeds, and which has gone far to establishing that mutual trust between West and East, a distinguishing characteristic of Speculative Freemasonry. A Provincial Grand Lodge was re-established in Bombay in 1860, and converted into a District Grand Lodge in 1871.

The **Grand Lodge of Ireland** granted a warrant to establish a Lodge at Kurnal in 1837, but it was short lived. An attempt was made in 1869 to establish a Lodge in Bombay, but on the representation of the Grand Secretary of England, to the Deputy Grand Secretary of

Ireland that it would be objectionable to create a third masonic jurisdiction in the Province, there being two already, viz., English and Scottish, the Grand Lodge of Ireland decline to grant the warrant. In 1911, however, a warrant was sanctioned for the establishment of Lodge "St. Patrick" and since that year two other Lodges have sprung into being.

The Grand Lodge of England—All three Constitutions of the United Kingdom, the United Grand Lodge of England, the Grand Lodge of Ireland and the Grand Lodge of Scotland hold jurisdiction in India. By far the largest is the first; the next largest is the third and the number of Lodges under Ireland is as yet small. The Grand Lodge of England divides its rule under Five District Grand Masters independent of each other and directly subordinate to the Grand Master of England by whom they are appointed.

Bengal.

80 Lodges. The Earl of Ronaldshay, G.C.I.E., District Grand Master.

Madras.

31 Lodges. The Hon. L. E. Buckley, C.S.I., District Grand Master.

Bombay.

48 Lodges. W. A. Haig-Brown, J.P., Hon. Mag., District Grand Master.

Punjab.

31 Lodges. Col. H. T. Pease, C.I.E., District Grand Master.

Burma.

14 Lodges. The Hon. E. W. Ormond, District Grand Master.

—
204

The Grand Lodge of Ireland has no District Grand Master in India at present, the Lodges corresponding direct with the Grand Lodge in Dublin. There are ten Lodges, 4 in Calcutta, 3 in Ceylon and 3 in Bombay.

The Grand Lodge of Scotland exercises its rule through a Grand Master of all Scottish Freemasonry in India, who is elected by the Brethren subject to confirmation by the Grand Master Mason of Scotland, Maj. Gen. W. E. Jennings, C.I.E., the present incumbent of the office, controls 56 Lodges.

Royal Arch Masonry—Under England, the District Grand Master in any District is nearly always created also Grand Superintendent, his Deputy as Second and another Companion as Third Principal.

Under Ireland there is no local jurisdiction and under Scotland the office is elective subject to confirmation.

The five English Districts are constituted as under:—

Bengal.

27 Chapters. The Earl of Ronaldshay, G.C.I.E., Grand Superintendent.

Madras.

15 Chapters. The Hon. Mr. L. E. Buckley, C.S.I., Grand Superintendent.

Bombay.

Chapters. W. A. Haig-Brown, J.P., Hon. Mag., Grand Superintendent.

Punjab.

18 Chapters. Col. H. T. Pease, C.I.E., P.A. G. Soj. (Eng.), Grand Superintendent.

Burma.

6 Chapters. The Hon. Mr. E. W. Ormond, Grand Superintendent.

87

There is one Irish Chapter in Calcutta.

The present Grand Superintendent of R. A. Masonry under Scotland is the Hon. Maj. Gen. W. E. Jennings, C.I.E., and there are 29 Chapters.

Mark Masonry—Under England, Mark Masonry is worked under the Grand Mark Lodge of England and Wales, and divided into separate Districts; but in most cases the District Grand Master is also District Grand Mark Master.

Bengal.

26 Lodges. R. W. Bro. D. L. Johnston, I.C.S., D. Grand Master.

Bombay.

14 Lodges. W. A. Haig-Brown, J.P., Hon. Mag., D. Grand Master.

Madras.

13 Lodges. The Hon. L. E. Buckley, C.S.I., D. Grand Master.

Punjab.

14 Lodges. Col. H. T. Pease, C.I.E., D. Grand Master.

Burma.

6 Lodges. Arthur Blake, District Grand Master.

The **Mark degree** is incorporated with the Royal arch degree in Irish Chapters. Mark degree is worked in some S. C. Lodges, but mostly in R. A. Chapters, in which the Excellent R.A.M. and other degrees can be obtained. S. C. Chapters insist upon candidates being Mark

Master Masons before exaltation. Mark degree in Craft Lodges is conferred by the Rt. Wor. Master in S. C. Craft does not recognise the ceremony of Rt. W. Mark Master. This is confined strictly to Chapters. Such Chapter has a Lodge of M. M. M. working under its charter. Separate charters for Mark Lodges are only issued by the G. Chapter of Scotland.

Other Degrees.—There are many side degrees worked in India, of the Antient and Accepted Rite, no degree higher than the 18° is worked in India under England, but under Scotland the 30° is worked. The Knight Templar Degree is also worked in several places under both English and Scottish jurisdiction. There are fourteen 18th Degree Chapters working in India.

Roman Eagle Conclave No. 43, Bombay.
St. Mary's Commandery No. 43, Bombay.
R. A. Mariner, 72, 514 and 662, Bombay.
R. A. Mariner, 61, 81, 82, and 106, Madras.
Secret Monitor, 14, 21, 36, 37, 40 and 42, Madras.

Benevolent Associations.—Each District works its own benevolent arrangements which include the Relief of Distressed Masons, educational provision for the children of Masons and maintenance provision for widows in poor circumstances.

All information will be given to persons entitled by the District Grand Secretary in each District. The names and addresses of **District Grand Secretaries** are given below:—

D. G. S., Bengal.

J. A. Dolton, 19, Park Street, Calcutta.

D. G. S., Bombay.

J. F. Pennock, V.D., P.A.G.D.C. (Eng.), Kings Buildings, Fort, Bombay.

D. G. S., Burma.

W. Kendall, 4, Hume Road, Rangoon.

D. G. S., Madras.

C. M. Maduranayakam Pillai, Freemason's Hall, Egmore, Madras.

D. G. S., Punjab.

David E. Johnston, P.G. St. B. (Eng) Freemasons' Hall, Lahore.

Indian Architecture.

I. ANCIENT.

The architecture of India has proceeded on lines of its own, and its monuments are unique among those of the nations of the world. An ancient civilization, a natural bent on the part of the people towards religious fervour of the contemplative rather than of the fanatical sort, combined with the richness of the country in the sterner building materials—these are a few of the factors that contributed to making it what it was, while a stirring history gave it both variety and glamour. Indian architecture is a subject which at the best has been studied only imperfectly, and a really comprehensive treatise on it has yet to be written. The subject is a vast and varied one, and it may be such a treatise never will be written in the form of one work at any rate. The spirit of Indian art is so foreign to the European of art culture that it is only one European in a hundred who can entirely understand it, while art criticism and analysis is a branch of study that the modern Indian has not as yet ventured upon to any appreciable extent. Hitherto the one, and with a few exceptions the only recognized authority on the subject has been Fergusson, whose compendious work is that which will find most ready acceptance by the general reader. But Fergusson attempted the nearly impossible task of covering the ground in one volume of moderate dimensions, and it is sometimes held that he was a man of too purely European a culture, albeit wide and eclectic, to admit of sufficient depth of insight in this particular direction. Fergusson's classification by races and religions is, however, the one that has been generally accepted hitherto. He asserts that there is no stone architecture in India of an earlier date than two and a half centuries before the Christian era, and that "India owes the introduction of the use of stone for architectural purposes, as she does that of Buddhism as a state religion, to the great Asoka, who reigned B.C. 272 to 236."

Buddhist Work.

Fergusson's first architectural period is then the Buddhist, of which the great tope at Sanchi with its famous Northern gateway is perhaps the most noted example. Then we have the Gandharan topes and monasteries. Perhaps the examples of Buddhist architecture of greatest interest and most ready access to the general student are to be found in the Chaitya halls or rock-cut caves of Karli, Ajunta, Nasik, Ellora and Kanheri. A point with relation to the Gandhara work may be alluded to in passing. This is the strong European tendency, variously recognized as Roman, Byzantine but most frequently as Greek, to be observed in the details. The foliage seen in the capitals of columns bears strong resemblance to the Greek acanthus, while the sculptures have a distinct trace of Greek influence, particularly in the treatment of drapery, but also of hair and facial expression. From this it has been a fairly common assumption amongst some authorities that Indian art owed much of its best to European influence, an assumption that is strenuously combated by others as will be pointed out later.

The architecture of the Jains comes next in order. Of this rich and beautiful style the most noted examples are perhaps the Dilwara temples near Mount Abu, and the unique "Tower of Victory" at Chittore.

Other Hindu Styles.

The Dravidian style is the generic title usually applied to the characteristic work of the Madras Presidency and the South of India. It is seen in many rock-cut temples as at Ellora, where the remarkable "Kylas" is an instance of a temple cut out of the solid rock, complete, not only with respect to its interior (as in the case of mere caves) but also as to its exterior. It is, as it were, a life-size model of a complete building or group of buildings, several hundred feet in length, not built, but sculptured in solid stone, an undertaking of vast and, to our modern ideas, unprofitable industry. The Pagoda of Tanjore, the temples at Srirangam, Chidambaram, Vellore, Vijayanagar, &c., and the palaces at Madura and Tanjore are among the best known examples of the style.

The writer finds some difficulty in following Fergusson's two next divisions of classification, the "Chalukyan" of South-central India, and the "Northern or Indo-Aryan style." The differences and the similarities are apparently so intermixed and confusing that he is fain to fall back on the broad generic title of "Hindu"—however unscientific he may thereby stand confessed. Amongst a vast number of Hindu temples the following may be mentioned as particularly worthy of study:—Those at Mukteswara and Bhuvanewar in Orissa, at Khajuraho, Bindrabun, Udaipur, Benares, Gwalior, &c. The palace of the Hindu Raja Man Singh at Gwalior is one of the most beautiful architectural examples in India. So also are the palaces of Amber, Datiya, Urcha, Dig and Udaipur.

Indo-Saracenic.

Among all the periods and styles in India the characteristics of none are more easily recognizable than those of what is generally called the "Indo-Saracenic" which developed after the Mahomedan conquest. Under the new influences now brought to bear on it the architecture of India took on a fresh lease of activity and underwent remarkable modifications. The dome, not entirely an unknown feature hitherto, became a special object of development, while the arch, at no time a favourite constructional form of the Hindu builders, was now forced on their attention by the predilections of the ruling class. The minaret also became a distinctive feature. The requirements of the new religion,—the mosque with its wide spaces to meet the needs of organized congregational acts of worship—gave opportunities for broad and spacious treatments that had hitherto been to some extent denied. The Moslem hatred of idolatry set a tabu on the use of sculptured representations of animate objects in the adornment of the buildings, and led to the development

of other decorative forms. Great ingenuity came to be displayed in the use of pattern and of geometrical and foliated ornament. This Moslem trait further turned the attention of the builders to a greater extent than before to proportion, scale and mass as means of giving beauty, mere richness of sculptured surface and the aesthetic and symbolic interest of detail being no longer to be depended on to the same degree.

The art was thus the gainer by the new conditions. It gained in power and variety much as "Classic" architecture gained under the Romans. But it equally lost something too. The Indo-Saracenic is apt to appear cold and hard. The writer was impressed by this on his first view of the Gwalior palace already mentioned. Though a Hindu building that palace has yet much of what might be called the more sophisticated quality of the Indo-Saracenic work as well as some similarity of detail. It has, being Hindu, a certain amount of sculptured ornament of animated forms, and the general effect of roundness, richness and interest thereby imparted seemed eloquent in suggestion as to what is lacking in so many of the Mahometan buildings.

Foreign Influence.

There would appear to be a conflict between archaeologists as to the extent of the effect on Indian art produced by foreign influence under the Mahometans. The extreme view on the one hand is to regard all the best of the art as having been due to foreign importation. The Gandharan sculptures with their Greek tendency, the development of new forms and modes of treatment to which allusion has been made, the similarities to be found between the Mahometan buildings of India and those of North Africa and Europe, the introduction of the minaret and, above all, the historical evidences that exist of the presence in India of Europeans during Mogul times, are cited in support of the theory. On the other hand those of the opposite school hold the foregoing view to be due to the prevailing European preconception that all light and leading must come by way of Europe, and the best things in art by way of Greece. To them the Gandharan sculpture, instead of being the best, is the worst in India even because of its Greek tincture. They find in the truly indigenous work beauties and significances not to be seen in the Graeco-Bactrian sculptures, and point to those of Borobuder in Java, the work of Buddhist colonists from India, wonderfully preserved by reason of an immunity from destructive influences given by the insular position, as showing the best examples of the art extant. It is probable that a just estimate of the merits of the controversy, with respect to sculpture at any rate, cannot be formed till time has obliterated some of the differences of taste that exist between East and West.

To the adherents of the newer school the undisputed similarities between Indo-Mahometan and Hindu buildings outweigh those between Indian and Western Mahometan work, especially in the light of the dissimilarities between the latter. They admit the changes produced by the advent of Islam,

but contend that the art, though modified, yet remained in its essence what it had always been, indigenous Indian. The minaret, the dome, the arch, they contended, though developed under the Moslem influence, were yet, so far as their detailed treatment and craftsmanship are concerned, rendered in a manner distinctively Indian. Fergusson is usually regarded as the leader of the former school, while the latter and comparatively recent school has at present found an eager champion in Mr. E. B. Havell, whose works, on the subject are recommended for study side by side with those of the former writer. Mr. Havell practically discards Fergusson's racial method of classification into styles in favour of a chronological review of what he regards to a greater extent than did his famous precursor as being one continuous homogeneous Indian mode of architectural expression, though subject to variations from the influences brought to bear upon it and from the varied purposes to which it was applied.

Agra and Delhi.

Agra and Delhi may be regarded as the principal centres of the Indo-Saracenic style—the former for the renowned Taj Mahal, for Akbar's deserted capital of Fatehpur Sikri, his tomb at Secundra, the Moti Masjid and palace buildings at the Agra fort. At Delhi we have the great Jumma Masjid, the Fort, the tombs of Humayon, Sufdar Jung, &c.; and the unique Qutb Minar. Two other great centres may be mentioned, because in each there appeared certain strongly marked individualities that differentiated the varieties of the style there found from the variety seen at Delhi and Agra, as well as that of one from that of the other. These are Ahmedabad in Gujarat and Bijapur on the Dekhan, both in the Bombay Presidency.

Ahmedabad.

At Ahmedabad with its neighbours Sirkhej and Champanir there seems to be less of a departure from the older Hindu forms, a tendency to adhere to the lintel and bracket rather than to have recourse to the arch, while the dome though constantly employed, was there never developed to its full extent as elsewhere, or carried to its logical structural conclusion. The Ahmedabad work is probably most famous for the extraordinary beauty of its stone "jali"—or pierced lattice-work, as in the palm tree windows of the Sidi Sayyid Masjid.

Bijapur.

The characteristics of the Bijapur variety of the style are equally striking. They are perhaps more distinctively Mahomedan than those of the Ahmedabad buildings in that here the dome is developed to a remarkable degree, indeed the tomb of Mahmud—the well-known "Gol Gumbaz"—is cited as shewing the greatest space of floor in any building in the world roofed by a single dome, not even excepting the Pantheon. The lintel also was here practically discarded in favour of the arch. The Bijapur style shews a bold masculine quality and a largeness of structural conception that is unequalled elsewhere in India, though in richness and delicacy it does not attempt to rival the work of the further North. In this we recognize among other influences

that of the prevailing material, the hard uncompromising Dekhan basalt. In a similar manner the characteristics of the Ahmedabad work with its greater richness of ornamentation are bound up with the nature of the Gujarati freestone, while at Delhi and Agra the freer

choice of materials available—the local red and white sandstones, combined with access to marble and other more costly materials—was no doubt largely responsible for the many easily recognizable characteristics of the architecture of these centres.

II. MODERN.

The modern architectural work of India divides itself sharply into two classes. There is first that of the indigenous Indian "Master-builder" to be found chiefly in the Native States, particularly those in Rajputana. Second there is that of British India, or of all those parts of the peninsula wherever Western ideas and methods have most strongly spread their influence, chiefly, in the case of architecture, through the medium of the Department of Public Works. The work of that department has been much animadverted upon as being all that building should not be, but, considering it has been produced by men of whom it was admittedly not the *metier*, and who were necessarily contending with lack of expert training on the one hand and with departmental methods on the other, it must be conceded that it can show many notable buildings. Of recent years there has been a tendency on the part of professional architects to turn their attention to India, and a number of these has even been drafted into the service of Government as the result of a policy initiated in Lord Curzon's Viceroyalty. In time, therefore, and with the growth of the influence of these men, such of the reproach against the building of the British in India as was just and was not merely thoughtlessly maintained as a corollary to the popular jape against everything official, may gradually be removed. If this is so as to Government work progress should be even more assured in the freer atmosphere outside of official life. Already in certain of the greater cities, where the trained modern architect has established himself, in private practice, there are signs that his influence is beginning to be felt. He still complains, however, that the general public of India needs much educating up to a recognition of his value, both in a pecuniary sense and otherwise. It is also to be observed that the survival of a relic of the popular idea of the time before his advent, to the effect that though an architect might occasionally "design" a building it was always an engineer who built it, is still indicated by the architect in some cases deeming it advisable to style himself "architect and engineer."

To the work of the indigenous "master-builder" public attention has of recent years been drawn with some insistence, and the suggestion has been pressed that efforts should be directed towards devising means for the preservation of what is pointed out—and now universally acknowledged—to be a remarkable survival—almost the only one left in the world—of "living art," but which is threatened with gradual extinction by reason of the spread of Western ideals and fashions. The matter assumed some years ago the form of a mild controversy centring round the question of the

then much discussed project of the Government of India's new capital at Delhi. It was urged that this project should be utilised to give the required impetus to Indian art rather than that it should be made a means of fostering European art which needed no such encouragement at India's expense. The advocates of this view appear for the most part to have been adherents of the "indigenous Indian" school of archaeologists already mentioned, and to have based their ideas on their own reading of the past. They still muster a considerable following not only amongst the artistic public of England and India, but even within the Government services. Their opponents, holding what appears to be the more official view both as to archaeology and art, have pointed to the "death" of all the arts of the past in other countries as an indication of a natural law, and deprecate as waste of energy all efforts to resist this law, or to institute what they have termed "another futile revival." The British in India they contend, should do as did the ancient Romans in every country on which they planted their conquering foot. As those were wont to replace indigenous art with that of Rome, so should we set our seal of conquest permanently on India by the erection of examples of the best of British art. This is the view which, as we have indicated, appears to have obtained for the moment the more influential hearing, and the task of designing and directing the construction of the principal buildings in the new Capital has accordingly been entrusted jointly to a London and to a South African architect, neither of whom can be unduly influenced by either past or recent architectural practice so far as India is concerned.

The results cannot but be awaited with the keenest interest, and meanwhile the controversy, with suspended judgment, naturally falls into abeyance. It is, moreover, however vital to the interests of the country's architecture, too purely technical and academic for its merits to be estimated by the general reader or discussed here. Its chief claim on our attention has in the fact that it affords an added interest to the tourist, who may see the fruits of both schools of thought in the various modern buildings of British India as well as examples of the "master builders" work in nearly every native town and bazaar. The town of Lashkar in Gwalior State may be cited as peculiarly rich in instances of picturesque modern Indian street architecture, while at Jaipur, Udaipur, Benares, etc., this class of work may be studied in many different forms both civil and religious. The extent to which the "unbroken tradition from the past" exists may there be gauged by the traveller who is architect enough for the purpose.

Archæology.

The archæological treasures of India are as varied as they are numerous. Those of the pre-Muhammadan period may roughly be divided into (1) architectural and sculptural monuments and (2) inscriptions. No building or sculpture in India with any pretensions to be considered an example of architecture or art can be ascribed to a time earlier than that of Asoka (circa 250 B.C.). In the pre-Asoka architecture of India, as in that of Burma or China at the present day, wood was solely or almost solely employed. Even at the close of the 4th century, B.C., Megasthenes, the Greek Ambassador at the court of Chandragupta, grandfather of Asoka, describes Pataliputra, the capital of the Indian monarch, as "surrounded by a wooden wall pierced with loop-holes for the discharge of arrows." If the capital itself was thus defended, we can easily infer that the architecture of the period was wooden. And long long after stone was introduced the lithic styles continued to be influenced by, or copied from, the wooden.

Monumental Pillars.—The first class of works that we have to notice are the monumental pillars, known as *lats*. The oldest are the monolithic columns of Asoka, nearly thirty in number, of which ten bear his inscriptions. Of these the Lauriya-Nandangarh column in the Champaran District, Tirhut, is practically uninjured. The capital of each column, like the shaft, was monolithic, and comprised three members, *viz.*, a Persepolitan bell, abacus, and crowning sculpture in the round. By far the best capital of Asoka's time was that exhumed at Sarnath near Benares. The four lions standing back to back on the abacus are carved with extraordinary precision and accuracy. Of the post-Asokan period one pillar (B.C. 150) stands to the north-east of Benagar in the Gwalior State, another in front of the cave of Karli (A.D. 70), and a third at Eran in Central Provinces belonging to the 5th Century, A. D. All these are of stone; but there is one of iron also. It is near the Qutb Minar at Delhi, and an inscription on it speaks of its having been erected by a king called Chandra, identified with Chandragupta II. (A.D. 375-413) of the Gupta dynasty. It is wonderful "to find the Hindus at that age forging a bar of iron larger than any that have been forged even in Europe to a very late date, and not frequently even now." Pillars of later style are found all over the country, especially in the Madras Presidency. No less than twenty exist in the South Kanara District. A particularly elegant example faces a Jaina temple at Mudabidri, not far from Mangalore.

Topes.—*Stupas*, known as *dagabas* in Ceylon and commonly called Topes in North India, were constructed either for the safe custody of relics hidden in a chamber often near the base or to mark the scene of notable events in Buddhist or Jaina legends. Though we know that the ancient Jains built *stupas*, no specimen of Jaina *stupas* is now extant. Of those belonging to the Buddhists, the great Tope of Sanchi in Bhopal, is the most intact and entire of its class. It consists of a low circular drum supporting a hemispherical dome of less diameter. Round the drum is an open passage for circum-

ambulation, and the whole is enclosed by a massive stone railing with lofty gates facing the cardinal points. The gates are essentially wooden in character, and are carved, inside and out, with elaborate sculptures. The *stupa* itself probably belonged to the time of Asoka, but as Sir John Marshall's recent explorations have conclusively shown, the railing and the gateways were at least 150 and 200 years later, respectively. Other famous Buddhist *stupas* that have been found are those of Bharhut between Allahabad and Jubbulpore, Amravati in the Madras Presidency, and Piprahwa on the Nepalese frontier. The tope proper at Bharhut has entirely disappeared, having been utilised for building villages, and what remained of the rail has been removed to the Calcutta Museum. The bas-reliefs on this rail which contain short inscriptions and thus enable one to identify the scenes sculptured with the *Jatakas* or Birth Stories of Buddha give it a unique value. The *stupa* at Amravati also no longer exists, and portions of its rail, which is unsurpassed in point of elaboration and artistic merit, are now in the British and Madras Museums. The *stupa* at Piprahwa was opened by Mr. W. C. Peppe in 1898, and a steatite or soap-stone reliquary with an inscription on it was unearthed. The inscription, according to many scholars, speaks of the relics being of Buddha and enshrined by his kinsmen, the Sakyas. And we have thus here one of the *stupas* that were erected over the ashes of Buddha immediately after his demise.

Caves.—Of the rock excavations which are one of the wonders of India, nine-tenths belong to Western India. The most important groups of caves are situated in Bhaja Bedsa, Karli, Kanheri, Junnar, and Nasik in the Bombay Presidency, Ellora and Ajanta in Nizam's Dominions, Barabar 16 miles north of Gaya, and Udayagiri and Khandagiri 20 miles from Cuttack in Orissa. The caves belong to the three principal sects into which ancient India was divided, *viz.*, the Buddhists, Hindus and Jains. The earliest caves so far discovered are those of Barabar which were excavated by Asoka and his grandson Dasaratha, and dedicated to Ajivikas, a naked sect founded by Makkhali Gosala. This refutes the theory that cave architecture was of Buddhist origin. The next earliest caves are those of Bhaja, Pitalkhora and cave No. 9 at Ajanta and No. 19 at Nasik. They have been assigned to 200 B.C. by Fergusson and Dr. Burgess. But there is good reason to suppose from Sir John Marshall's recent researches and from epigraphic considerations that they are considerably more modern. The Buddhist caves are of two types—the *chaityas* or chapel caves and *viharas* or monasteries for the residence of monks. The first are with vaulted roofs and horse-shoe shaped windows over the entrance and have interiors consisting of a nave and side aisles with a small *stupa* at the inner circular end. They are thus remarkably similar to Christian basilicas. The second class consist of a hall surrounded by a number of cells. In the later *viharas* there was a sanctum in the centre of the back wall containing a large image of Buddha. Hardly a *chaitya* is found without one or more *viharas* adjoining it. Of the Hindu cave tem-

ples that at Elephanta near Bombay is perhaps the most frequented. It is dedicated to Siva and is not earlier than the 7th century A.D. But by far the most renowned cave-temple of the Hindus is that known as Kailasa at Ellora. It is on the model of a complete structural temple but carved out of solid rock. It also is dedicated to Siva and was excavated by the Rashtrakuta king, Krishna I, (A. D. 768), who may still be seen in the paintings in the ceilings of the upper porch of the main shrine. Of the Jaina caves the earliest are at Khandgiri and Udayagiri; those of the mediæval type, in Indra Sabha at Ellora; and those of the latest period, at Ankaï in Nasik. The ceilings of many of these caves were once adorned with fresco paintings. Perhaps, the best preserved among these are those at Ajanta, which were executed at various periods between 350-650 A.D. and have elicited high praise as works of art. Copies were first made by Major Gill, but most of them perished by fire at the Crystal Palace in 1866. The lost ones were again copied by John Griffiths of the Arts School, Bombay, half of whose work was similarly destroyed by a fire at South Kensington. They were last copied by Lady Herringham during 1909-11. Her pictures, which are in full scale, are at present exhibited at the Indian Section of the Victoria and Albert Museum, South Kensington, and have been reproduced in a volume brought out by the India Society.

Gandhara Monuments.—On the north-west frontier of India, anciently known as Gandhara, are found a class of remains, ruined monasteries and buried *stupas*, among which we notice for the first time representations of Buddha and the Buddhist pantheon. The free use of Corinthian capitals, friezes of nude Erotes bearing a long garland, winged Atlantes without number, and a host of individual motifs clearly establish the influence of Hellenistic art. The mound at Peshawar, locally known as Shah-ji-ke-Dheri, which was explored in 1909, brought to light several interesting sculptures of this school together with a reliquary casket, the most remarkable bronze object of the Gandhara period. The inscription on the casket left no doubt as to the mound being the *stupa* raised over the bones of Buddha by the Indo-Scythian king Kanishka. They were presented by Lord Minto's Government to the Buddhists of Burma and are now enshrined at Mandalay. To about the same age belong the *stupas* at Manikyala in the Punjab opened by Ranjit Singh's French Generals, Ventura and Court, in 1830. Some of them contained coins of Kanishka.

Structural Temples.—Of this class we have one of the earliest examples at Sanchi, and another at Tigowa in the Central Provinces. In South India we have two more examples, *viz.*, Lad Khan and Durga temples at Aihole in Bijapur. All these belong to the early Gupta period and cannot be later than 500 A.D. The only common characteristic is flat roofs without spires of any kind. In other respects they are entirely different and already here we mark the beginning of the two styles, Indo-Aryan and Dravidian, whose differences become more and more pronounced from the 7th century onwards. In the Indo-Aryan style, the most prominent ones tend to the perpendicular, and in the

Dravidian to the horizontal. The salient feature of the former again is the curvilinear steeple, and of the latter, the pyramidal tower. The most notable examples of the first kind are to be found among the temples of Bhubaneswar in Orissa, Khajarah in Bundelkhand, Osia in Jodhpur, and Dilwara on Mount Abu. One of the best known groups in the Dravidian style is that of the Mamallapuram Rathas, of 'Seven Pagodas', on the seashore to the south of Madras. They are each hewn out of a block of granite, and are rather models of temples than *raths*. They are the earliest examples of typical Dravidian architecture, and belong to the 7th century. To the same age has to be assigned the temple of Kailasanath at Conjeeveram, and to the following century some of the temples at Aihole and Pattadkal of the Bijapur District, Bombay Presidency, and the monolithic temple of Kailasa at Ellora, referred to above. Of the later Dravidian style the great temple at Tanjore and the Srirangam temple of Trichinopoly are the best examples.

Intermediate between these two main styles comes the architecture of the Deccan, called Chalukyan by Fergusson. In this style the plan becomes polygonal and star-shaped instead of quadrangular; and the high-storied spire is converted into a low pyramid in which the horizontal treatment of the Dravidian is combined with the perpendicular of the Indo-Aryan. Some fine examples of this type exist, at Dambal, Rattihali, Tiliwalli and Hangal in Dharwar, Bombay Presidency, and at Ittagi and Warangal in Nizam's Dominions. But it is in Mysore among the temples at Hallebid, Belur, and Somnathpur that the style is found in its full perfection.

Inscriptions.—We now come to inscriptions, of which numbers have been brought to light in India. They have been engraved on varieties of materials, but principally on stone and copper. The earliest of these are found incised in two distinct kinds of alphabet, known as Brahmi and Kharoshthi. The Brahmi was read from left to right, and from it have been evolved all the modern vernacular scripts of India. The Kharoshthi was written from right to left, and was a modified form of an ancient Aramaic alphabet introduced into the Punjab during the period of the Persian domination in the 5th century, B.C. It was prevalent up to the 4th century, A.D., and was supplanted by the Brahmi. The earliest dateable inscriptions are the celebrated edicts of Asoka. One group of these has been engraved on rocks, and another on pillars. They have been found from Shahbazgarhi 40 miles north-east of Peshawar to Nigliva in the Nepal Terai, from Girnar in Kathiawar to Dhauri in Orissa, from Kalsi in the Lower Himalayas to Siddapur in Mysore, showing by the way the vast extent of territory held by him. The reference in his Rock Edicts to the five contemporary Greek Princes, Antiochus II. of Syria, Ptolemy Philadelphus, and so forth is exceedingly interesting, and fixes B.C. 269 as the date of his coronation. His Rummindei pillar inscription, again, discovered in Nepal Terai, now settles, beyond all doubt, the birth-place of Buddha which was for long disputed. Another noteworthy record is the inscription of the Besnagar pillar. The pillar had been known for a long time, but Sir John

Marshall was the first to notice the inscription on it. It records the erection of this column, which was a Garuda pillar, in honour of the god Vasudeva by one Heliodoros, son of Dion, who is described as an envoy of King Antialcidas of Taxila. Heliodoros is herein called a *Bhagavata*, which shows that though a Greek he had become a Hindu and presumably a Vaishnava. Another inscription worth noticing and especially in this connection is that of Cave No. 10 at Nasik. The donor of this cave, Ushavadata, who calls himself a Saka and was thus an Indo-Scythian, is therein spoken of as having granted three hundred thousand kine and sixteen villages to gods and Brahmans and as having annually fed one hundred thousand Brahmans. Here is another instance of a foreigner having embraced Hinduism. Thus for the political, social, economical and religious history of India at the different periods the inscriptions are invaluable records, and are the only light but for which we are 'forlorn and blind.'

Saracenic Architecture.—This begins in India with the 13th century after the permanent occupation of the Muhammadans. Their first mosques were constructed of the materials of Hindu and Jaina temples, and sometimes with comparatively slight alterations. The mosque called *Adhai-din-ka-jhompra* at Ajmer and that near the Qutb Minar are instances of this kind. The Muhammadan architecture of India varied at different periods and under the various dynasties, imperial and local. The early Pathan architecture of Delhi was massive and at the same time was characterised by elaborate richness of ornamentation. The Qutb Minar and tombs of Altamsh and Ala-ud-din Khilji are typical examples. Of the Sharqi style we have three mosques in Jaunpur with several tombs. At Mandu in the Dhar State, a third form of Saracenic architecture sprung up, and we have here the Jami Masjid, Hoshang's tomb, Jahaz Mahall and Hindola Mahall as the most notable instances of the secular and ecclesiastical styles of the Malwa Pathans. The Muhammadans of Bengal again developed their own style, and Pandua, Malda, and Gaur teem with the ruins of the buildings of this type, the important of which are the Adina Masjid of Sikandar Shah, the Elakhi mosque, Kadam Rasul Masjid, and so forth. The Bahmani dynasty of Gulbarga and Bidar were also great builders, and adorned their capitals with important buildings. The most striking of these is the great mosque of Gulbarga, which differs from all mosques in India in having the whole central area covered over so that what in others would be an open court is here roofed by sixty-three small domes. "Of the various forms which the Saracenic architecture assumed," says Fergusson, "that of Ahmedabad may probably be considered to be the most elegant." It is notable for its carved stone work; and the work of the perforated stone windows in Sidi Sayyid's mosque, the carved niches of the minars of many other mosques, the sculptured *Mihrabs* and domed and panelled roofs is so exquisite that it will rival anything of the sort executed elsewhere at any period. No other style is so essentially Hindu. In complete contrast with this was the form of architecture employed by the Adil Shahi dynasty of Bija-

pur. There is here relatively little trace of Hindu forms or details. The principal buildings now left at Bijapur are the Jami Masjid, Gagan Mahall, Mihtar Mahall, Ibrahim Rauza and mosque and the Gol Gumbaz. Like their predecessors, the Pathans of Delhi, the Moghuls were a great building race. Their style first began to evolve itself during the reign of Akbar in a combination of Hindu and Muhammadan features. Noteworthy among the emperor's buildings are the tomb of Humayun, and the palaces at Fatehpur, Sikri and Agra. Of Jehangir's time his mosque at Lahore and the tomb of Itimad-ud-daula are the most typical structures. "The force and originality of the style gave way under Shah Jahan to a delicate elegance and refinement of detail." And it was during his reign that the most splendid of the Moghul tombs, the Taj Mahal at Agra, the tomb of his wife Mumtaz Mahall, was constructed. The Moti Masjid in Agra Fort is another surpassingly pure and elegant monument of his time.

Archæological Department.—As the archaeological monuments of India must attract the attention of all intelligent visitors, they would naturally feel desirous to know something of the Archæological Department. The work of this Department is primarily two-fold, conservation, and research and exploration. None but spasmodic efforts appear to have been made by Government in these directions till 1870 when they established the Archæological Survey of India and entrusted it to General (afterwards Sir) Alexander Cunningham, who was also the first Director-General of Archæology. The next advance was the initiation of the local Surveys in Bombay and Madras three years after. The work of these Surveys, however, was restricted to antiquarian research and description of monuments, and the task of conserving old buildings was left to the fitful efforts of the local Governments, often without expert guidance or control. It was only in 1878 that the Government of India under Lord Lytton awoke to this deplorable condition, and sanctioned a sum of 3½ lakhs to the repair of monuments in United Provinces, and soon after appointed a conservator, Major Cole, who did useful work for three years. Then a reaction set in, and his post and that of the Director-General were abolished. The first systematic step towards recognising official responsibility in conservation matters was taken by Lord Curzon's Government, who established the seven Archæological Circles that now obtain, placed them on a permanent footing, and united them together under the control of a Director-General, provision being also made for subsidising local Governments out of imperial funds, when necessary. The Ancient Monuments Preservation Act was passed for the protection of historic monuments and relics especially in private possession and also for State control over the excavation of ancient sites and traffic in antiquities. Under the direction of Sir John Marshall, Kt., C.I.E., Director-General of Archæology, a comprehensive and systematic campaign of repair has been prosecuted, and the result of it is manifest in the present altered conditions of old buildings. One has only to see for example the Moghul buildings at Agra, Delhi, Lahore and Ajmer, in order to be convinced how the work of careful reconstruc-

tion and repair has converted these decayed and desecrated monuments with their modern excrescences into edifices of unrivalled loveliness. Another noteworthy feature of this work has been the rescue of many of these buildings from profane and sacrilegious uses. It is well-known that the superb Pearl Mosque of Jahangir in the Lahore Fort contained a Government treasury, and the Sleeping Hall of Shah Jahan served as a Church for the British troops. At Bijapur two mosques have been recovered, one of which was used as Dak Bungalow and the other as Post Office. The local Kutcherry has now been expelled from the lovely masjid of Sidi Sayyid at Ahmedabad. The Cave temples at Trichinopoly are no longer godowns. Nor has research work been in any way neglected under the new order of things. A unique feature of it for the first time introduced under the guidance and advice of Sir John Marshall has been the scientific excavation of buried sites, such as Sarnath where Buddha preached his first sermon, Kasia or Kusinara where he died, Saheth-Maheth the ancient Srasvasti,

Taxila or Takshasila, the seat of the ancient Hindu University, Patna or Pataliputra, the Mauryan capital, Besnagar or the ancient Vidisa, and so forth. The results achieved, especially at the last three places, are of a sensational character. At Taxila Sir John has brought to light the remains of a palace of the Assyrian style and a massive and imposing temple dedicated to Zoroastrian worship and resembling a Greek peripteral temple with the addition of a solid tower of the Likkurat type rising behind the shrine. At Patna Dr. D. B. Spooner has found traces of a Mauryan palace which is an actual replica of the Achæmenian palace at Persepolis. At Besnagar Mr. D. R. Bhandarkar has excavated a temple of Vasudeva of the third century B.C., which proves to be the oldest of all Hindu shrines in India. Among other results of this excavation is the noteworthy discovery that the art of forging steel was practised in India more than two thousand years ago and that mortar was used in the construction of brick masonry at least as early as the third century B.C.

TIDAL CONSTANTS.

The approximate standard time of High Water may be found by adding to, or subtracting from, the time of High Water at London Bridge, given in the calendar, the corrections given as below:—

Manners and Customs.

Next to the complexion of the people, which varies from fair to black, the tourist's attention in India is drawn by their dress and personal decoration. In its simplest form a Hindu's dress consists of a piece of cloth round the loins. Many an ascetic, who regards dress as a luxury, wears nothing more, and he would dispense with even so much if the police allowed him to. The Mahomedan always covers his legs, generally with trousers, sometimes with a piece of cloth tied round the waist and reaching to the ankles. Hill men and women, who at one time wore a few leaves before and behind and were totally innocent of clothing, do not appear to-day within the precincts of civilisation and will not meet the tourist's eye. Children, either absolutely nude or with a piece of metal hanging from the waist in front, may be seen in the streets in the most advanced cities, and in the homes of the rich. The child Krishna, with all the jewels on his person is nude in his pictures and images.

Dress.—The next stage in the evolution of the Hindu dress brings the loincloth nearly down to the feet. On the Malabar coast, as in Burma, the ends are left loose in front. In the greater part of India, they are tucked up behind—a fashion which is supposed to befit the warrior, or one end is gathered up in folds before and the other tucked up behind. The simplest dress for the trunk is a scarf thrown over the left shoulder, or round both the shoulders like a Roman toga. Under this garment is often worn a coat or a shirt. When an Indian appears in his full indigenous dress, he wears a long robe, reaching at least down to the calves: the sleeves may be wide, or long and sometimes puckered from the wrist to the elbow. Before Europeans introduced buttons, a coat was fastened by ribbons, and the fashion is not obsolete. The Mahomedan prefers to button his coat to the left, the Hindu to the right. A shawl is tied round the waist over the long coat, and serves as a belt, in which one may carry money or a weapon, if allowed. The greatest variety is shown in the head-dress. More than seventy shapes of caps, hats, and turbans, may be seen in the city of Bombay. In the Punjab and the United Provinces, in Bengal, in Burma and in Madras other varieties prevail. Cones and cylinders, domes and truncated pyramids, high and low, with sides at different angles: folded brims, projecting brims: long strips of cloth wound round the head or the cap in all possible ways, ingenuity culminating perhaps in the "parrot's beak" of the Maratha turban—all these fashions have been evolved by different communities and in different places, so that a trained eye can tell from the head-covering whether the wearer is a Hindu, Mahomedan or Parsi, and whether he hails from Poona or Dharwar, Ahmedabad or Bhavnagar.

Fashion Variations.—Fashions often vary with climate and occupation. The Bombay fisherman may wear a short coat and a cap, and may carry a watch in his pocket; yet, as he must work for long hours in water; he would not cover his legs, but suspend only a coloured kerchief from his waist in front. The Pathan of the cold north-west affects loose baggy

trousers, a tall head-dress befitting his stature and covers his ears with its folds as if to keep off cold. The poorer people in Bengal and Madras do not cover their heads, except when they work in the sun or must appear respectable. Many well-to-do Indians wear European dress at the present day, or a compromise between the Indian and European costumes, notably the Indian Christians and Parsis. Most Parsis however have retained their own head-dress, and many have not borrowed the European collar and cuffs. The majority of the people do not use shoes: those who can afford them wear sandals, slippers and shoes, and a few cover their feet with stockings and boots after the European fashion in public.

Women's Costumes.—The usual dress of a woman consists of a long piece of cloth tied round the waist, with folds in front, and one end brought over the shoulder or the head. The folds are sometimes drawn in and tucked up behind. In the greater part of India women wear a bodice: on the Malabar coast many do not, but merely throw a piece of cloth over the breast. In some communities petticoats, or drawers, or both are worn. Many Mussalman ladies wear gowns and scarfs over them. The vast majority of Mahomedan women are *gosha*, and their dress and persons are hidden by a veil when they appear in public: a few converts from Hinduism have not borrowed the custom. In Northern India Hindu women have generally adopted the Mussalman practice of seclusion. In the Dekhan and in Southern India they have not.

As a rule the hair is daily oiled, combed, parted in the middle of the head, plaited and rolled into a chignon, by most women. Among high caste Hindu widows sometimes shave their heads in imitation of certain ascetics, or monks and nuns. Hindu men do not, as a rule, completely shave their heads, Mahomedans in most cases do. The former generally remove the hair from a part of the head in front, over the temples, and near the neck, and grow it in the centre, the quantity grown depending upon the fancy of the individual. Nowadays many keep the hair cropped in the European fashion, which is also followed by Parsis and Indian Christians. Most Mussalmans grow beards, most Hindus do not, except in Bengal and elsewhere, where the Mahomedan influence was paramount in the past. Parsis and Christians follow their individual inclinations. Hindu ascetics, known as Sadhus or Bairagis as distinguished from Sanyasis, do not clip their hair, and generally coil the uncombed hair of the head into a crest, in imitation of the god Shiva.

Hindu women wear more ornaments than others of the corresponding grade in society. Ornaments bedeck the head, the ears, the nose the neck, the arms, wrists, fingers, the waist—until motherhood is attained, and by some even later—and the toes. Children wear anklets. Each community affects its peculiar ornaments, though imitation is not uncommon. Serpents with several heads, and flowers, like the lotus, the rose, and the champaka, are among the most popular object or representation in gold or silver.

Caste Marks.—Caste marks constitute a mode of personal decoration peculiar to Hindus, especially of the higher castes. The simplest mark is a round spot on the forehead. It represents prosperity or joy, and is omitted in mourning and on fast-days. It may be red, or yellowish as when it is made with ground sandalwood paste. The worshippers of Vishnu draw a vertical line across the spot, and as Lakshmi is the goddess of prosperity, it is said to represent her. A more elaborate mark on the forehead has the shape of U or V, generally with the central line, sometimes without it, and represents Vishnu's foot. The worshippers of Shiva adopt horizontal lines, made with sandalwood paste or ashes. Some Vaishnavas stamp their temples, near the corners of the eyes, with figures of Vishnu's conch and disc. Other parts of the body are also similarly marked. The material used is a kind of yellowish clay. To smear the arms and the chest with sandalwood paste is a favourite kind of toilet, especially in the hot season. Beads of Tulsī or sacred Basil, and berries of *Rudraksha elaeocarpus ganitrus*, strung together are worn round their necks by Vaishnavas and Shaivas, respectively. The Lingayats, a Shaiva sect, suspend from their necks a metallic casket containing the Linga or phallus of their god. Bairagis, ascetics, besides wearing Rudraksha rosaries round their necks and matted hair, smear their bodies with ashes. Religious mendicants suspend from their necks figures of the gods in whose name they beg. Strings of cowries may also be seen round their necks. Muslim dervishes sometimes carry peacock's feathers.

Hindu women mark their foreheads with a red spot or horizontal line. High caste widows are forbidden to exhibit this sign of happiness, as also to deck themselves with flowers or ornaments. Flowers are worn in the chignon. Hindu women smear their faces, arms, and feet sometimes with a paste of turmeric, so that they may shine like gold. The choice of the same colour for different purposes cannot always be explained in the same way. The red liquid with which the evil eye is averted may be a substitute for the blood of the animal slaughtered for the purpose in former times. In many other cases this colour has no such associations. The Muslim dervish affects green, the Sikhs Akali is fond of blue, the Sanyasi adopts orange for his robe, and no reason can be assigned with any degree of certainty.

Shiva.—India is a land of temples, mosques and shrines, and the Hindu finds at every turn some supernatural power to be appeased. Shiva has the largest number of worshippers. He has three eyes, one in his forehead, a moon's crescent in his matted hair, and at the top of the coil a woman's face representing the river Ganges. His abode is the Mount Kailas in the Himalayas, from which the river takes its source. Round his neck and about his ears and limbs are serpents, and he also wears a necklace of skulls. In his hands are several weapons, especially a trident, a bow, and a thunderbolt, and also a drum which he sounds while dancing for he is very fond of this exercise. He sits on a tiger's skin, and his vehicle is a white bull. His wife Parvati and his son Ganesha sit on his thighs. An esoteric mean-

ing is attached to every part of his physical personality. The three eyes denote an insight into the past, present and future: the moon, the serpents, and the skulls denote months, years and cycles, for Shiva is a personification of time, the great destroyer. He is also worshipped as a Linga or phallus which represents creative energy.

Ganpat.—Ganesh or Ganpati, the controller of all powers of evil subject to Shiva, is worshipped by all sects throughout India. Every undertaking is begun with a prayer to him. He has the head of an elephant, a large abdomen, serpents about his waist and wrists, several weapons in his hands, and a piece of his tusk in one hand. He is said to have broken it off when he wanted to attack the moon for ridiculing him. The different parts of his body are also esoterically explained. His vehicle is a rat.

Parvati.—Parvati, the female energy of Shiva, is worshipped under various names and forms. She is at the head of all female supernatural powers, many of whom are her own manifestations. Some are benign and beautiful, others terrible and ugly. Kali, the tutelary deity of Kalighat or Calcutta, is one of her fierce manifestations. In this form she is black: a tongue smeared with blood projects from her gaping mouth: besides her weapons, she carries corpses in her hands, and round her neck are skulls. Bombay also takes its name from a goddess, Mumbadevi. Gouri, to whom offerings are made in Indian homes at an annual festival, is benign. On the other hand the epidemic diseases like the plague and small-pox are caused by certain goddesses or "mothers."

Vishnu, the second member of the Hindu trinity, is the most popular deity next to Shiva. He is worshipped through his several incarnations as well as his original personality. His home is the ocean of milk, where he reclines on the coils of a huge, many-headed serpent. At his feet sits Lakshmi, shampooing his legs. From his navel issues a lotus, on which is seated Brahma, the third member of the trinity. In his hands are the conch, which he blows on the battlefield, and the disc, with which the heads of his enemies are severed. Round his neck are garlands of leaves and flowers, and on his breast are shining jewels. As Shiva represents destruction, Vishnu represents protection, and his son is the god of love. To carry on the work of protection, he incarnates himself from time to time, and more temples are dedicated nowadays to his most popular incarnations, Rama and Krishna, than to his original personality. Rama is a human figure, with a bow in one of his hands. He is always accompanied by his wife Sita, often by his brother Lakshmana, and at his feet, or standing before him with joined hands, is Hanuman, the monkey chieftain, who assisted him in his expedition against Ravana, the abductor of his wife. Krishna is also a human figure, generally represented as playing on a flute, with which he charmed the damsels of his city, esoterically explained to mean his devotees.

Brahma is seldom worshipped: only a couple of temples dedicated to him have yet been discovered in all India,

Minor Deities.—The minor gods and goddesses and the deified heroes and heroines who fill the Hindu pantheon, and to whom shrines are erected and worship is offered, constitute a legion. Many of them enjoy a local reputation, are unknown to sacred literature, and are worshipped chiefly by the lower classes. Some of them, though not mentioned in ancient literature, are celebrated in the works of modern saints.

The **Jains** in their temples, adore the sacred personages who founded and developed their sect, and venerate some of the deities common to Hinduism. But their view of Divinity is different from the Hindu conception, and in the opinion of Hindu theologians they are atheists. So also the **Buddhists** of Burma pay almost the same veneration to Prince Siddhartha as if he was a god, and indeed elevate him above the Hindu gods, but from the Hindu standpoint they are also atheists.

Images.—Besides invisible powers and deified persons, the Hindus venerate certain animals, trees and inanimate objects. This veneration must have originated in gratitude, fear, wonder, and belief in spirits as the cause of all good or harm. Some of the animals are vehicles of certain gods and goddesses—the eagle of Vishnu; the swan of Brahma; the peacock of Saraswati; Hanuman, the monkey, of Rama; one serpent upholds the earth, another makes Vishnu's bed: elephants support the ends of the universe, besides one such animal being Indra's vehicle: the goddess Durga or Kali rides on a tiger: one of Vishnu's incarnations was partly man and partly lion. The cow is a useful animal: to the Brahman vegetarian her milk is indispensable, and he treats her as his mother. So did the Rishi of old, who often subsisted on milk and fruits and roots. To the agriculturist cattle are indispensable. The snake excites fear. Stones, on which the image of a serpent is carved, may be

seen under many trees by the roadside. The principal trees and plants worshipped are the Sacred Fig or Pipal, the Banyan, the Sacred Basil, the Bilva or Wood Apple, the Asoka, and the Acacia. They are in one way or another associated with some deity. The sun, the moon, and certain planets are among the heavenly bodies venerated. The ocean and certain great rivers are held sacred. Certain mountains, perhaps because they are the abodes of gods and Rishis, are holy. Pebbles from the Gandaki and the Narmada, which have curious lines upon them, are worshipped in many households and temples.

Worship.—Without going into a temple, one can get a fair idea of image worship by seeing how a serpent-stone is treated under a tree. It is washed, smeared with sandal, decorated with flowers: food in a vessel is placed before it, lamps are waved, and the worshipper goes round it, and bows down his head, or prostrates himself before the image. In a temple larger bells are used than the small ones that are brought to such a place: jewels are placed on the idol: and the offerings are on a larger scale. Idols are carried in public procession in palanquins or cars. The lower classes sacrifice animals before their gods and goddesses.

Domestic Life.—Of the daily domestic life of the people a tourist cannot see much. He may see a marriage or funeral procession. In the former he may notice how a bridegroom or bride is decorated: the latter may shock him, for a Hindu dead body is generally carried on a few pieces of bamboo lashed together: a thin cloth is thrown over it and the body is tied to the frame. The Mahomedan bier is more decent, and resembles the Christian coffin. Some Hindus, however, carry the dead to the burial ground in a palanquin with great pomp. The higher castes cremate the dead: others bury them. Burial is also the custom of the Muslims, and the Parsis expose the dead in Towers of Silence.

Indian Names.

The personal name of most Hindus denotes a material object, colour, or quality, an animal, a relationship, or a deity. The uneducated man, who cannot correctly pronounce long Sanskrit words, is content to call his child, father, brother, uncle, or mother, or sister, as the case may be. This practice survives among the higher classes as well. Appa Saheb, Anna Rao, Babaji, Bapu Lal, Bhai Shankar, Tatacharya, Jijibhai, are names of this description, with honorific titles added. It is possible that in early society the belief in the re-birth of departed kinsmen lent popularity to this practice. Nothing could be more natural than to call a man white, black, or red: gold or silver: gem, diamond, ruby, pearl, or merely a stone: small or tall, weak or strong: a lion, a snake, a parrot, or a dog: and to name a woman after a flower or a creeper. Thus, to take a few names from the epics, Pandu means

white, and so does Arjuna: Krishna black Bhima terrible: Nakula a mongoose: Shunaka a dog: Shuka a parrot: Shringa a horn. Among the names prevalent at the present day Hira is a diamond: Ratna or Ratan a jewel: Sonu or Chinna gold: Velli or Belli, in the Dravidian languages, means white metal or silver. Men are often called after the days of the week on which they were born, and hence they bear the names of the seven heavenly bodies concerned. When they begin to assume the names of the Hindu deities, they practically enter upon a new stage of civilisation. It is doubtful whether the Animists ever venture to assume the names of the dreaded spirits worshipped by them. To pronounce the name of a devil is to invite him to do harm. If the spirits sometimes bear the names of human beings, the reason seems to be that they were originally human.

High-caste practices.—The high caste Hindu, on the other hand, believes that the more often the name of a deity is on his lips, the more merit he earns. Therefore he deliberately names his children after his gods and goddesses, so that he may have the opportunity of pronouncing the holy names as frequently as possible. These are also sonorous and picturesque. Shiva is happy: Vishnu is a plover: Govinda is the cowherd Krishna: Keshava has fine hair: Rama is a delighter: Lakshmana is lucky: Narayana produced the first living being on the primeval waters: Ganesha is the Lord of Shiva's hosts: Dinakara is the luminary that makes the day: Subrahmanya is a brother of Ganesha. Sita is a furrow: Saitri a ray of light: Tara a star: Radha prosperity: Rukmini is she of golden ornaments: Bhama of the glowing heart. Shiva and Vishnu has each got at least a thousand names, and they may be freely drawn upon and paraphrased in naming one's children; and the whole Hindu pantheon is as crowded as it is large. When a mother loses several children, she begins to suspect that some evil spirit has conspired against her and in order to make her off-spring unattractive to the powers of darkness, she gives them ugly names, such as Keru, rubbish, or Ukirda, dunghill, or Martoba, the mortal. Women are named after rivers, as Sarasvati, Ganga, Bhagirathi, Godavari, or Kaveri, just as men are sometimes called after mountains. Manu counsels young men not to choose a wife with such a name, perhaps because a river is an emblem of deviousness and inconstancy, as a hill is an emblem of stability. But the names of rivers have not been discarded. The Burmans have a curious custom: if a child is born on a Monday, its name must begin with a guttural, on Tuesday with a palatal, on Thursday with a labial, on Saturday with a dental.

Family names.—When a person rises in importance, he adds to his personal name a family or caste name. It was once the rule that the title Sharma might be added to a Brahman's name, Varma to a Kshatriya's, Gupta to a Vaishyas, and Dasa to a Shudra's. This rule is fairly well observed in the case of the first two titles, but the meaning of the other two has changed. Dasa means a slave or servant, and the proudest Brahman cannot disdain to call himself the servant of some god. Thus, although Kalidas, the famous poet, was a Shudra, Ramadas, the famous guru of Shivaji, was a Brahmin. The Vaishnavas have made this fashion of calling oneself a servant of some god exceedingly popular, and in Western India high caste Hindus of this sect very commonly add Das to their names. The Brahmans of Southern India add Aiyer or Aiyangar to their names. Shastri, Acharya, Bhat, Bhattacharya, Upadhayaya, Mukhopadhyaya, changed in Bengal into Mukerji, are among the titles indicative of the Brahmanical profession of studying and teaching the sacred books. Among warlike classes, like the Rajputs and Sikhs, the title Singh (lion) has become more popular than the ancient Varma. The Sindhi Mal, as in Gidamal, means brave and has the same force. Raja, changed into Raya, Rao and Rai was a political title, and is not confined to any caste. The Bengali family names, like Bose and Ghose,

Dutt and Mitra, Sen and Guha, enable one to identify the caste of their bearers, because the caste of a family or clan cannot be changed. Shet, chief of a guild or a town, becomes Chetty, a Vaishya title, in Southern India. Mudaliyar and Nayudu, meaning leaders, are titles which were assumed by castes of political importance under native rulers. Nayar and Menon are the titles of important castes in Malabar. Ram, Lal, Nand, Chand, are among the additions made to personal names in Northern India. Suffixes like Ji, as in Ramji or Jamshedji, the Kanarese Appa, the Telugu Garu, the feminine Bai or Devi, are honorific. Prefixes like Babu, Baba, Lala, Sodhi, Pandit, Raja, and the Burmese Maung are also honorific.

Professional names.—Family names sometimes denote a profession: in some cases they might have been conferred by the old rulers. Mehta, Kulkarni, Deshpande, Chitnavis, Mahalnavis are the names of offices held in former times. One family name may mean a flour seller, another a cane-seller, and a third a liquor-seller. To insert the father's name between one's personal and the family name is a common practice in Western India. It is rare elsewhere. When a family comes from a certain place, the suffix 'kar' or 'wallah' is added to the name of the place and it makes a family surname in Western India. Thus we may have Chiplunkars and Suratwallahs, or without these affixes we may have Bhavnagrirs, Malabaris and Bilimorias, as among Parsis. Thus Vasudev Pandurang Chiplunkar would be a Hindu, whose personal name is Vasudev's father's name Pandurang, and family name derived from the village of Chiplun, is Chiplunkar. In Southern India the village name precedes the personal name. The evolution of Musalman names follows the same lines as Hindu names. But Muslims have no god or goddesses, and their names are derived from their religious and secular history. These names and titles are often as long and picturesque as Hindu appellations. The agnomen Baksh, Din, Ghulam, Khwaje, Fakir, Kazi, Munshi, Sheikh, Syed, Begum, Bibi and others, as well as honorific additions like Khan, have meanings which throw light of Muslim customs and institutions. The Parsis also have no gods and goddesses, and their personal names are generally borrowed from their sacred and secular history. Their surnames frequently indicate a profession or a place, as in the case of Hindus in Western India. Bathwallah, Readymoney, Contractor, Saklatwallah, Adenwallah and others like them are tell-tale names.

Conversions.—As a rule, a child is named soon after it is born, and in the case of males the appellation is not changed. The higher Hindu castes have a separate ceremony called the name-giving ceremony performed on the twelfth day after birth. When a girl is married in these castes, the husband's family give her a new personal name. When a boy is invested with the sacred thread and is made a twice-born, his name is not changed, but when a man joins an order of ascetics, his lay name is dropped, and he assumes a new name. So also when a Burman joins an order of monks or nuns, the lay name is superseded by a Pali name. Christian converts change their original name when they are baptised.

Indian Art.

In India there has never been so marked a separation between what are now known as the Fine Arts, and those applied to industry as was the case in Europe during the nineteenth century. As, however, Industrial art forms the subject of a special article in this book, the term Indian Art will here be confined to Architecture, Sculpture and Painting.

Historical.—The degree of proficiency attained in art by Indians prior to B. C. 250, can only be conjectured by their advancement in literature; and by the indirect evidences of indebtedness shown by the works of the historic period, to those which preceded them; for direct records of artistic work of an earlier date than B. C. 250 do not exist. The chief historic schools of architecture are as follows:

Name.	Dates.	Locality of the best Examples.
Buddhist	.. B.C.250— A.D.750.	Ellora, Ajanta, Kali, Sanchi.
Jaina	.. A.D.1000— 1300.	Ellora, Mount Abu, Palitana.
Brahminical	.. A.D. 500 to the present	Ellora, Elephanta, Orissa, Bhuvanewar, Dharwar.
Chalukyan	.. A.D.1000— 1200.	Umber, Somnathpur Ballur.
Dravidian	.. A.D.1350— 1750.	Ellora, Tanjore, Madura, Thnevelly.
Pathan	.. A.D.1200— 1550.	Delhi, Mandu, Jaunpore.
Indo-Saracenic	A.D.1520— 1760.	Lahore, Delhi, Agra, Amber, Bijapur.

Buddhist Architecture is mainly exemplified by the rock-cut temples and monasteries found in Western India and in the *Topes* or sacred mounds. The interior decorations, and external facades of the former, and the rails and gates surrounding the latter point unmistakably to their being derived from wooden structures of an earlier period. The characteristic features of these temples are horse-shoe openings in the facades to admit light, and colonnades of pillars with richly ornamented caps in the interior halls. Jaina Architecture is found in its most highly developed form in the Dilwara temples at Mount Abu. The ground plan consists of a shrine for the god or saint; a porch, and an arcaded courtyard with niches for images. The characteristic of the style is grace and lightness, with decorative carving covering the whole interior, executed with great elaboration and detail. Constructional methods suggest that original types in wood have been copied in marble.

Brahminical, Chalukyan and Dravidian styles differ little in essential plan, all having a shrine for the god, preceded by pillared porches. The outer forms vary. The northern Brahminical temples have a curved pyramidal roof to the shrines, which in the southern or Dravidian style are crowned by a horizontal system of storied towers, and each story, decreasing in size, is ornamental with a central cell and figures in high relief. The Chalukyan style is affected by its northern and southern neighbours, taking features from each without

losing its own special characteristics of which the star-shaped plan of the shrine, with the five-fold bands of external ornament, is the principal features. Pathan Architecture was introduced into India by the Mahomedan invasion of the thirteenth century. At old Delhi are fine examples in the Kutub Mosque and Minar. The characteristics of the style are severity of outline, which is sometimes combined with elaborate decoration due, it is stated, to the employment of Hindu craftsmen. The mosques and tombs at Ahmedabad already show Hindu influence; but purer examples are to be found at Jaunpore and Mandu. Indo-Saracenic Architecture reached the climax of its development during the reigns of the Moghul Emperors, Akbar, Jehangir and Shah Jahan. It eclipsed in richness of material and refinement of taste the building efforts of previous periods, its crowning example being the Taj Mahal at Agra. The buildings erected during the Adil Shahi dynasty at Bijapur at a slightly later date, exhibit a certain Turkish influence; especially in the great tomb of Mahmud. Though less refined and lacking the attraction of precious materials in their decoration, these splendid edifices are held in higher esteem by some critics than those of the Moghals, on account of their simplicity, grandeur and fine proportions. The era of great civil architecture in India was revived by the Mahomedan powers. Splendid palaces and fortresses were built at Madras, Delhi, Agra, Fattehpore-Sikri and Bijapur, and the example thus set was copied by the Hindu princes at Jaipur, Udaipur and elsewhere in India. The application of great architectural treatment, unequalled in extent elsewhere, is to be seen in the Ghauts or steps enclosing lakes and on the banks of rivers. The most notable constructional contribution of the Mahomedans to Indian architecture was the introduction of the true arch and dome.

Sculpture.—The use of sculpture and painting in isolated works of art was practically non-existent in India until modern times. One or two reliefs and certain gigantic figures may be quoted as exceptions, but taken generally it may be stated that these arts were employed as the decorative adjuncts of architecture. No civil statuary, such as is now understood by the term, was executed; for no contemporary portrait figures, or busts in marble, or bronze, have come down to us from the ruins of ancient India, as they have from those of Egypt, Greece and Rome. Sculpture has been used exclusively as the handmaid of religion, and to this fact may be attributed the stereotyped forms to which it became bound. The lavish use of sculpture on Indian temples often exceeds good taste, and mars the symmetry and dignity of their mass and outline; but for exuberance of imagination, industrious elaboration and vivid expression of movement, Indian sculpture is perhaps without its equal elsewhere in the world. The most impressive specimens are the earliest, found in the Buddhist and Brahminical cave temples of Ellora, Ajanta and Elephanta. The great Trimurthi in the last named of these temples ranks for mystery

and expressive grandeur with the greatest masterpieces of Egyptian art. The outstanding characteristics of Hindu sculpture are the power displayed in suggesting movement; the fine sense of decorative arrangements of line and mass; and an overpowering ingenuity in intricate design. Mahomedan sculpture in India, though not exclusively confined to geometric forms as is that of the more severe Arabian school, is very restrained as compared with that of the Hindus. Floral motifs are often used in the ornaments to tombs and palaces, but rarely in those of mosques. Their geometric ornament shows great ingenuity and invention; and wonderful decorative use is made of Persian, Arabic and Urdu lettering in panels, and their borders. The representation of human or animal figures is rarely to be met with. Sculptured and modelled relief is, as a rule, kept very low; and is mainly confined to the decoration of mouldings, architraves, lintels, or the bands of ornament which relieve large exterior wall spaces. Buildings of purely Mahomedan design and workmanship show greater restraint than those upon which Hindu workmen have been employed and are more satisfactory; but at Ahmedabad the two celebrated windows are striking examples of a happy combination of the two styles.

Painting.—Much of the carved stonework upon ancient Indian buildings was first plastered and then decorated with colour, but the only paintings, in the modern acceptation of the term, now existing, which were executed prior to the Moghul period, are those upon the walls of the cave temples at Ajanta. These remarkable works were produced at intervals during the first 600 years of the Christian era. They exhibit all the finer characteristics of the best Indian sculpture, but with an added freedom of expression due to the more tractable vehicle employed. They remained hidden in the Deccan jungles for nearly twelve hundred years, until accidentally discovered in 1816. They are painted in a species of fresco; and when first brought to light were well preserved, but they have greatly deteriorated owing to the well meant, but misguided action of copyists, and the neglect of the authorities. Their origin is as wrapt in mystery as is that of the artists who painted them; for no other paintings of similar power and character are known to exist; and the artists, so far as is known, left no successors. Nine hundred years elapsed between the completion of the Ajanta paintings and the commencement of the second period of Indian painting. This owned its origin to the introduction of Persian artists by the Moghul Emperor Akbar; and the establishment of the indigenous Moghul school was due to the encouragement and fostering care of his successors, Jehangir and Shah Jahan. Unlike the works of the Ajanta painters, which were designed upon a large scale, the pictures of the Moghul school were miniatures. They were executed in a species of opaque water-colour upon paper or vellum, resembling in technique the illuminated missals produced by the monks in Europe during the middle ages. Some of the finest of the earlier specimens in India are of a religious character; this phase of development being closely allied to the art

the calligraphist. As its range extended, a remarkable school of portrait painters arose; notable for restrained but extremely accurate drawing, keen insight into character, harmonious colour, fine decorative feeling, and extraordinary delicacy and finish in the painting of detail. The artists of a Hindu off-shoot of this movement, known as the Rajput school, were less fully endowed with the technical and purely aesthetic qualities than were the Moghul painters; but they brought to their work poetry and sentiment which are not to be found in that of the Mahomedans. The pictures of both branches of the Moghul school, although highly decorative in character, were not intended for exhibition upon the walls of rooms, according to Western practice, and, when not used as illustrations or decorations to manuscript books, were preserved in portfolios. As this school of painting was the last expression of traditional art in India, in the restricted sense here applied to the term, and, as the question has a distinct bearing upon the modern development of painting, a few words may be added regarding the difference between the conventions followed by Eastern and Western painters. Until the middle of the fourteenth century the conventions of both East and West were practically the same, though the use of them differed according to environment and national temperament. These conventions the artists of the East have retained; and development has been upon the line of decorative fitness, harmony of colour, and expressive action. Their art has throughout been decorative, and when natural objects have been depicted, their treatment has been that of a flat pattern. The European painters, after the period above mentioned on the contrary, sought to attain the appearance of actuality in the objects depicted by the study of the science of light and shade, and perspective; and in achieving this end, and developing it into the realisation of atmosphere and light, they sacrificed a large measure of the decorative quality which characterised the work of the earlier school. Eastern artists have ignored or been blind to light and shade; and in works entirely free from European influence one will look in vain for any suggestion of it in their figures or for shadows of objects cast upon the ground. During the last fifty years there has been a strong movement toward a return to decorative conventions, on the part of European artists who have assimilated much that the East has to teach them, without thereby affecting the distinctively Western character of their work. Indian and Japanese artists have been less successful when attempting the reverse of this practice, and appear to lose whatever is best in their traditional practice without acquiring the finer qualities of that of the West.

Modern Painting.—As the reign of Shah Jahan exhibits the high tide of artistic development in India, so the reign of his successor Aurangzeb marks the period of its rapid decline. The causes of this are attributable to the absence of encouragement by this Emperor; to his long periods of absence from the court at Delhi or Agra, entailed by the continuous wars he waged in his efforts to bring the whole of the Peninsula under his rule; and partly to the tendency strongly inherent in the Indian artist

to become stereotyped in his practice. All foreign designers, painters and craftsmen who had been attracted to India by the great works carried out by Akbar, Jehangir and Shah Jahan left the country, and their places were taken by no successors. The indigenous artists left to themselves in the isolated courts of small Indian princes, or collected in schools in remote districts, employed themselves mainly upon repeating the works of a previous age, instead of seeking new motifs for artistic treatment. So purely mechanical did the work become that in some of the schools or guilds of painters, the execution of a single picture was subdivided; one craftsman painting the face, a second the drapery, and a third the background. Such methods could only lead to deterioration and decay. At the time when the British East India Company ceased to be only a guild of merchants and became a great administrative power in 1757, very little vitality survived in the ancient art of the country. During the century of its administrative history between the battle of Plassey and the Indian Mutiny, the "Company" was too fully occupied in fighting for its existence, extending its borders and settling the internal economy of its ever increasing territories, to be able to give much attention to conserving any remnant of artistic practice which had survived. Without any deliberate intention of introducing western art into the country, Greek and its derivative styles of architecture were adopted for public and private buildings in Calcutta, Bombay and Madras because these were found to be more suitable for their purpose than buildings of indigenous pattern. The practical result was the same; for the Indian craftsmen employed upon their erection were confronted with styles affording no scope for the application of their traditional ornament and concerning which they had no knowledge or sympathy. As there were no sculptors in India capable of modelling or carving civil sculpture, the monuments to distinguish public servants were all imported from England; and the portraits, or other paintings which decorated the interior walls of the buildings, were furnished by European painters who visited India or by artists in England. Although a considerable amount of research work of a voluntary nature was done by Archaeologists, no official interest was taken in artistic education until the Government of India was transferred to the British Crown in 1859. In England itself, the first fifty years of the nineteenth century was a period of gross commercialism and artistic degradation; but with the advent of the International Exhibition of 1851 the eyes of the nation were opened to the value of art as applied to industry.

The Schools of Art then instituted throughout England were imitated in a timid and tentative manner in India; and were attached to the educational system, which had been previously modelled upon a definitely European basis. These schools of art, it should be remembered, were specially established to assist the artistic industries of the country, and not to provide instruction in architecture, sculpture and painting. In fact at a subsequent period they narrowly escaped extinction by the Secretary of State, upon the ground that they had become schools of painting and had thus

been diverted from performing the original function for which they were established. The work of the Schools of Art in regard to industrial art is referred to elsewhere; and as two of them, that at Madras and that at Lahore, have confined their activities almost exclusively to this branch of the subject it is necessary to mention only the work of the Schools at Calcutta and Bombay in the present article. The Calcutta school, except for occasional experiments in the application of the graphic arts to lithography, engraving and stained glass, has become a school of painting and drawing. That at Bombay covers a wider field; for in addition to classes for modelling, painting and design it possesses a special school of architecture; a range of technical workshops, in which instruction is given in the applied arts; and research laboratories and studios devoted solely to the improvement of the Pottery industry. It is in the principles underlying the instruction in painting that the schools at Calcutta and Bombay have taken almost diametrically opposite roads to reach the end they both have in view, namely, the revival of the art of painting in India by means of an indigenous school of Indian painters. Mr. Havell, who until a few years back was the Principal of the Calcutta School, banished from within its walls every vestige of European art; and claimed that the traditional art of India, in its old forms, is not dead, but merely sleeping or smothered by the blanket of European culture laid upon it for the last 150 years, and needed but to be released from this incubus to regain its pristine vigour. Well equipped with literary ability; backed by intense enthusiasm for the views he held, which he advocated with admirable persistence; he imposed upon his students an exclusive and severe study of the Moghul and Rajput schools of painting. He was fortunate in finding a willing and equally enthusiastic disciple in Mr. Abinandranath Tagore, an artist of fine imagination and fancy, endowed with technical ability of a high order, combined with a serious devotion to his art. He with other Bengal painters, inspired by Mr. Havell's precepts, founded, about fifteen years ago, what has since become known as the Calcutta School of painting. In their early work the painters of this school closely adhered to the conventions of Moghul and Rajput artists, whom they took as their models; and these early examples made a great impression upon all European critics who saw them. They were welcomed as the first sign of a genuine revival of Indian painting, based upon traditional lines, and it was confidently hoped that the movement would meet with the support it merited from Indians of all classes. Interesting as many individual works of the school undoubtedly are the anticipations which greeted its inception have scarcely been fulfilled by the Calcutta school. The painters themselves have never reached the high technical standard of the artists who produced the best works of the Moghul or Rajput school; and, as time has passed, their outlook appears to have shifted, and, while stemming the flood of western influence, they appear to have drifted into a backwater of Japanese conventions. The Indian public has failed to give the school the support it was hoped they would afford, and the movement has had to depend for encourage-

ment mainly upon Europeans in England and India.

Bombay School of Art.—The attitude towards the development of art in modern India taken by Mr. Cecil Burns, who has guided the policy of the Bombay school, is diametrically opposite to that favoured by Mr. Havell. While yielding to no one in his admiration for the ancient art of India, and giving every encouragement to his students to study its masterpieces, the view he takes is that with European literature dominating the system under which the educated classes in India are trained; with European ideas, and science permeating the professional, commercial, industrial, and political life of the country, it is not possible for modern Indians now to recapture the spirit which alone gave vitality to the great works of the past; that without this spirit, the conventions the ancient artists adopted are mere dead husks; and that to copy these would be as unprofitable as it would be for the artists of Europe to harness themselves to the conventions of the Greek and Roman sculptors or to those of the mediæval painters; that with European pictures, often of inferior quality illustrating every educational text book, and sold in the shops of every large city, it is essential for the proper education of art students that they should have before them the masterpieces of European art; and that, with the wide adoption of European styles of architecture in India, it is necessary for a school of art to possess the best examples of ornament applicable to the great historic styles, for the purpose of study and refer-

ence. There are certain basic principles common to the technique of all great art, such as fine and accurate drawing in its widest sense, composition and design, and the science of colour harmony. By means of these an artist can express his individuality and emotions, and Mr. Burns holds that the main function of a School of Art is to equip its students with the power of expression, untrammelled by any set conventions, so that when they leave the school, they do so with the capacity to employ their faculties in any direction their sympathies and tastes may impel them to take. Which of these two very divergent theories will produce the result both these gentlemen unite in wishing to see brought to pass, time alone will show. Certain it is that the driving fore of any artistic impulse must come from within the nation, and that India, like every other country, in its art, as in other matters, must work out its own salvation.

One striking success of hopeful augury has been achieved by the Bombay School in recent years. This is the establishment of a flourishing school of architecture in which the study of Indian architecture takes an important place. Connected with this school is a students' architectural association designed to keep past students in touch with the school and with one another. As architecture embraces and influences every branch of decorative and industrial art, it is to be hoped that this school may be the means whereby the ancient glories of Indian architecture will be some day revived in new forms, bringing in its train a vitalising influence upon every other form of artistic activity.

Routes between India and Europe.

The War from its outset completely altered the sailing programmes of all steamship lines maintaining services between India and Europe and the taking over of all vessels by the Shipping Controller upset the programmes altogether.

The Indian port for the direct journey to and from Europe is Bombay. There are ordinarily six lines of steamers by which the journey to and from the West *via* Bombay can be performed, either by sea all the way, or—and in some cases only—by sea part of the way and by rail across Europe. They are the P. & O., the Anchor Line, the City and Hall Line, and the Lloyd Triestino. The British India line also has an occasional service to London. The Natal line steamers are available for Western passages only, the steamers sailing round the Cape on their Eastward voyages. There are

ordinarily other services between Calcutta and the West, by steamers sailing round Ceylon, and several lines connect Colombo with Europe. Of the latter the Orient, the Messageries Maritimes and the Bibby Lines are the chief, besides the P. & O. The Bibby service extends to Rangoon. The new railway between India and Ceylon greatly increases the importance of the Colombo route for Southern India. The shortest time between London and Bombay is 14 days.

Fares from India by any of these lines fluctuate with the Exchange. First class fares by Ellerman's City and Hall Lines to Liverpool are £ 52 single, and £ 78 return, and to Marseilles £ 49-10 and £ 74-10. The Lloyd Triestino fares to Venice or Trieste are £ 60 first class and £ 46 second class.

Indian Train Service.

The distances and railway fares from Bombay to the principal centres of other parts of India are as follows, the trains now running considerably more slowly (for economy's sake) than in normal times:—

	Miles.	1st Class.	2nd Class.
Delhi, B. B. & C. I. Railway, <i>via</i> new Nagda-Muttra direct route	865 (27½ hours)	Rs. a. 81 2	Rs. a. 40 9
Delhi, G. I. P. Railway, <i>via</i> Agra	957 (30½ hours)	81 2	40 9
Simla, <i>via</i> Delhi	1,137	118 3	60 1
Calcutta, G.I.P. from Bombay, <i>via</i> Jubbulpore & Allahabad..	1,349	113 3½	56 10½
Calcutta, G. I. P. from Bombay, <i>via</i> Nagpur	1,223	105 3½	52 10½
Madras, G. I. P. from Bombay, <i>via</i> Raichur	794	74 8	37 3
Labore, <i>via</i> Delhi	1,162	109 0	54 8

THE SUEZ CANAL.

The annual report of the Suez Canal Company published in 1919 shows that the general maritime movement of 1918 was represented by the passing through the Canal of 2,225 ships of altogether 9,251,601 tonnage. In comparison with 1917 this is an increase of 169 ships and 882,683 tons (*i. e.*, 10.54 per cent.), but in comparison with the last report of normal years, that of 1913, there is a decrease of 2,563 ships and 10,782,283 tons, *viz.* 53.82 per cent. Nevertheless, if from the year 1913 the number of ships of enemy countries, as well as those of Russia, be omitted, the maritime movement in 1918 showed a decrease only of 40.13 instead of 45.84 per cent. in 1917.

The dues which the Canal Company was

authorised to charge by its concession of 1856 were 10 francs a ton, charged on the gross register tonnage. To these objections were soon raised and as the result of an international Conference at Constantinople in 1873 the dues were fixed at 10 francs per net register ton with a surtax of 4 francs—afterwards reduced to 3. British shipowners still found the dues excessive and a meeting of their representatives and those of the Canal Company in 1883 agreed that in 1885 the dues should be reduced to 9½ francs a ton, that subsequently they should be lowered on a sliding scale as the canal dividend increased, and that after the dividend reached 25 per cent. all the surplus profits

should be applied in reducing the rates until they were lowered to 5 francs a ton. Under this arrangement dues were fixed at 7½ francs per ton at the beginning of 1906, and at the outbreak of war were as low as 6½ francs a ton, where they remained until October, 1916, when they were raised by ½ franc a ton. An increase of 20c. per ton of 40 cubic feet in the dues of ships in ballast, took effect from 1st Jan. 1918, the effect of which was to bring the rates for laden and empty ships to the same level—8f. 50c. which as the dues are payable at the rate of 26f. 40c. to the £, is equivalent to 6s. 5d. The report issued in 1919 stated that altogether receipts for transit reached in 1918 a total of 83,404,235f. 57c., against 64,075,639f. 96c. in 1917. In this total the shares due to the various increases of tariff made since 1916 represents about 27,274,000f.

Improvement Schemes.—It was announced in 1914 that from and after January 1st, 1915, the maximum draught of water allowed to ships going through the Suez Canal would be increased by 1ft., making it 30ft. English.

The maximum permissible draught of ships using the Canal was 24·4 feet in 1870; in 1890 ships drawing 25·4 feet could make the passage; and during the following 24 years the increase has been at the average rate of about 1 foot every six years, thus bringing the maximum draught authorized to 29 feet.

The scheme of improvement adopted by the Company on the recommendation of the International Consultative Committee of Works, the British representatives on which are Sir William Matthews and Mr. Anthony Lister, is a comprehensive one, and the details suggest that it will meet the needs of the big ship.

A 40 feet Channel.—The declared policy of the Canal Company in regard to the deepening of the Canal is to offer a slightly greater depth of water than that available in ports east of Suez. It is claimed that, with the exception of Sydney, there is no eastern port which at

low tide has a greater depth of water than that now provided in the Canal throughout the full length of nearly 105 miles. In any case the work in hand should meet the needs of any ship likely to be built for the eastern trade during the next few years.

When the Canal was opened in 1869, the width was 72 feet and the depth about 26 feet 2 inches. In June, 1913, the width at a depth of 32 feet 8 inches had been increased to a minimum of 147 feet 6 inches over a length of about 85 miles, and to a width of 328 feet over a distance of about 20 miles. The latest scheme makes provision for a depth of 40 feet throughout and for a widening up to 196 feet 8 inches in the south section, and the cutting of an appropriate number of sidings in the north and central sections, where a minimum width of 147 feet 6 inches is believed to be sufficient for the requirements of the immediate future.

The work of enlarging the capacity of the Canal presents no special difficulty on the engineering side. A good deal of sand is occasionally driven into the channel at Port Said during storms, but a remedy for this will be found in extension of the west breakwater by about 2,700 yards at a cost of over £6,000,000. The construction of this extension, which has been in hand for the past two years, is making satisfactory progress. The Suez Roads are being adequately dredged in accordance with an agreement between the Egyptian Government and the Company.

Almost up to the end of 1915 the works for extending the jetty to the west of Port Said, works of capital importance for the **protection of the entry** to the Canal, were pushed on uninterruptedly. In November, however, for want of hydraulic lime, the manufacture of artificial rocks for this jetty was interrupted. The submarine foundations in stone and rubble of the new jetty were, as a matter of fact, completed to a length of 2,500 metres; the protective blocks were laid for 1,040 metres, and cemented for over 800 metres. The protection of the Channel is thus secured, and there is no need for any apprehension as to its future.

Travel in India.

Twenty years ago, a tour in India was possible only to the wealthy, the leisured and those who had friends in the country. The cost of the journey was very high, the methods of transportation were very slow; and the facilities for travel were so indifferent that it was a bold man who consigned himself to the mercies of the country without a sheaf of letters of introduction. Now the mail which in peace time is posted in London on Friday night, reaches Bombay in thirteen and a half days, and the passenger can travel by the same route and with the same speed as the mail. A dozen lines have covered the sea route between Europe and India and Ceylon with a plexus of regular services. The Indian Railways provide facilities on the trunk lines unsurpassed by the *trains-de-luxe* of Europe, and the Indian hotel has grown into a really comfortable caravan-serai.

In the touring season, which extends from November to March, there is the attraction of a perfect climate. It is never very hot; in the North indeed it is really cool, it is always fine and fresh and bracing. If there is one country in the world to which that elusive term applies, here we have at the season when the tourist arrives the real "Indian summer." Then there is its infinite variety. India is in no sense a nation and never will be. Its peoples are wide as the Poles asunder, each has its own art, its own architecture, its own customs and its own civilisation. A certain superficial resemblance runs through each; beneath lies a never-ending variety which age cannot wither nor custom stale.

The Grand Tour.—People coming to India for the first time so often ask:—"Where shall I go?" Well, wherever else the tourist may go, whatever else he should leave out, he should omit nothing on the Grand Tour. It is the foolish custom nowadays to sneer at those who follow the beaten tracks, but the visitor who shuns any part of the orthodox journey across India misses what nothing else can repay. **Bombay** is by far the most convenient point of departure, for here "the world end steamers wait," here is one of the finest cities in the British Empire, and here the traveller can best complete his outfit and arrangements. From Bombay stretch northwards the two great trunk lines of India. One, the **Bombay Baroda & Central India Railway**, leads through the pleasant garden of Gujarat to Ahmedabad,

the ancient Moslem capital of the Province, containing fine examples of Mahomedans and Jain architecture; thence to Abu for the famous Jain temples of Dilwara, and on to Ajmere, Jaipur and Agra. The other by the **Great Indian Peninsula Railway** carries the tourist over the Western Ghats by a superb mountain railway to Gwalior, whose rock fortress rises like a giant battleship from the plain, and so on to Agra. Of the glories of the Taj Mahal, Agra Fort, and the deserted city of Fatehpur Sikri it were supererogatory to speak. Another easy stage leads to **Delhi** that amazing collection of cities, dominated by the little Ridge where British valour kept the mutinous hordes at bay, and finally drove them from the city by a feat of arms unsurpassed in history. Then from Delhi the East Indian line leads comfortably to Benares, Lucknow and Calcutta, with the opportunity of an excursion to Cawnpore, if the spirit moves. The great charm of the Grand Tour is that it reveals the best that India can show. This route has the additional advantage that it fits in with any digressions which the time and purse of the traveller may permit. No one who can spare the time should fail to push northwards from Delhi to Peshawar, where the flower of the army keeps watch and ward over the Khyber, and up the dread Pass to the eyrie where the fort of Ali Masjid bars the way to all invaders. **Calcutta** is the best starting point for Darjeeling, though unfortunately the magnificent mountain panorama visible from there is often obscured at this season by mists. Then from Calcutta two alternatives open. A fine service of mail steamers leads to **Burma**, and one of the unforgettable memories of the East is a voyage down the Irrawaddy from Bhamo or Mandalay to Promé. Again, either direct from Calcutta, or *via* Burma, is an easy route to **Madras** and by way of Madura and Trichinopoly, with their peerless Hindu temples, back to Bombay, or on through Tuticorin to **Colombo**. But indeed the possibilities of expanding this tour are endless. Bombay is the best centre for the rock temples of Elephanta, Kenheri, Karli, Ellora and Ajanta. Calcutta is only a short distance from Puri the one Indian temple where there is no caste, and perhaps the most remarkable Hindu temple in the country. From Calcutta also start the river steamers which thread the steamy plains of Bengal and run to the tea gardens of Assam.

SPECIMEN TOURS.

A number of specimen tours in India are given below. They are taken from one of Messrs. Thos. Cook & Son's publications, from which firm further information may be obtained. The

traveller will also find he can obtain assistance from the principal Shipping Agents and Railway Companies, or from Messrs. Cox & Co., Messrs. Grindlay & Co., and Messrs King, King & Co.

	1st Class.	2nd Class Rail, 1st Class Steamer.
FROM BOMBAY TO CALCUTTA.		
<i>Via the North-West Provinces to Calcutta (including side trip from Calcutta to Darjeeling).</i>		
TOUR I.—From Bombay per B. B. & C. I. Railway <i>via</i> Ahmedabad, Abu Road (for Mount Abu), Ajmer, Jaipur, Delhi, Agra, Cawnpore, Lucknow and Benares to Calcutta, thence to Darjeeling, and back to Calcutta	266 4	133 3
TOUR II.—From Bombay per G. I. P. Railway <i>via</i> Itarsi, Gwalior, Agra, Delhi, Tundla Junction, Cawnpore, Lucknow and Benares to Calcutta, thence to Darjeeling, and back to Calcutta	267 15	134 7
FROM BOMBAY TO COLOMBO.		
<i>Via the North-West Provinces, Calcutta and Southern India to Colombo (including side trip from Calcutta to Darjeeling).</i>		
TOUR III.—From Bombay as in Tour No. I (<i>via</i> B. B. & C. I. Ry., Jaipur and the North-West Provinces) to Calcutta side trip to Darjeeling and back to Calcutta, thence <i>via</i> Khurda Road, for Puri (Jugganath), Madras, Tanjore, Trichinopoly, Madura, Danushkodi and Talaimannar to Colombo	423 8	212 13
TOUR IV.—From Bombay as in Tour No. II (<i>via</i> G. I. P. Ry., Itarsi, Agra and the North-West Provinces) to Calcutta, side trip to Darjeeling and back to Calcutta, thence as in Tour No. III to Colombo (<i>via</i> Southern India)	426 0	213 0
<i>Via the North-West Provinces, Calcutta (including Darjeeling), Burma and Southern India.</i>		
TOUR V.—From Bombay as in Tour No. I (<i>via</i> B. B. & C. I. Ry., Jaipur and the North-West Provinces) to Calcutta, side trip to Darjeeling and back to Calcutta, thence British India Steamer to Rangoon, Rail to Mandalay. Irrawaddy Steamer to Prome, Rail to Rangoon; British India Steamer to Madras, Rail <i>via</i> Tanjore, Trichinopoly, Madura to Danushkodi; Steamer to Talaimannar and Rail to Colombo	586 13	399 12
TOUR VI.—From Bombay as in Tour No. II (<i>via</i> G. I. P. Ry., Itarsi, Agra and the North-West Provinces) to Calcutta, thence as in Tour No. V to Colombo	587 6	400 0
FROM BOMBAY TO RANGOON.		
<i>Via the North-West Provinces and Calcutta to Rangoon (including a tour in Burma, also including a side trip from Calcutta to Darjeeling).</i>		
TOUR VII.—From Bombay as in Tour No. I (<i>via</i> B. B. & C. I. Ry., Jaipur and the North-West Provinces) to Calcutta side trip to Darjeeling and back to Calcutta, thence British India Steamer to Rangoon, Rail to Mandalay, Irrawaddy Steamer to Prome, Rail to Rangoon	447 9	288 14
TOUR VIII.—From Bombay as in Tour II (<i>via</i> G. I. P. Ry., Itarsi, Agra and the North-West Provinces) to Calcutta, side trip to Darjeeling and back to Calcutta, thence British India Steamer to Rangoon. Rail to Mandalay, Irrawaddy, Steamer to Prome, Rail to Rangoon	450 2	290 0

	1st Class.	2nd Class Rail, 1st Class Steamer.
FROM CALCUTTA TO BOMBAY.		
<i>Via the North-West Provinces.</i>		
TOUR IX. —From Calcutta <i>via</i> Benares, Lucknow, Cawnpore, Tundla, Agra, Delhi, Rewari, Jaipur, Ajmer (for Udaipur), Abu Road (for Mt. Abu), Ahmedabad and Baroda to Bombay	165 5	82 11
TOUR X. —From Calcutta <i>via</i> Benares, Moghal Serai, Cawnpore, Tundla, Agra, Delhi, Rewari, Jaipur, Ajmer (for Udaipur), Abu Road (for Mt. Abu) Ahmedabad and Baroda to Bombay	167 7	83 13
TOUR XI. —From Calcutta <i>via</i> Benares, Moghal Serai, Cawnpore, Tundla, Agra, Gwalior and Itarsi to Bombay	119 1	74 9
TOUR XII. —From Calcutta <i>via</i> Benares, Moghal Serai, Cawnpore, Delhi, Muttra, Agra, Gwalior and Itarsi to Bombay	167 14	83 15
CIRCULAR TOUR FROM CALCUTTA.		
TOUR XIII. —From Calcutta <i>via</i> Benares, Lucknow, Cawnpore, Tundla, Agra, Bandikui, Jaipur, Delhi, and Allahabad to Calcutta	191 1	95 9
<i>Extensions, Via Southern India to Colombo.</i>		
TOUR XIV. —From Bombay <i>via</i> Poona, Hyderabad, Wadi, Raichur, Madras, Tanjore, Trichinopoly, Madura, Danushkodi, and Talaimannar to Colombo	154 6	77 13
TOUR XV. —From Bombay <i>via</i> Poona, Hyderabad, Wadi, Guntakal, Bangalore, Erode, Trichinopoly, Madura, Danushkodi, and Talaimannar to Colombo	148 5	74 12
<i>Extensions to above Tours.</i>		
From Ajmer to Udaipur and return	34 12	17 6
From Abu Road to Mount Abu and return, one seat in Tonga (This excursion is strongly recommended, the scenery being very beautiful)	7 0
From Delhi to Lahore and return <i>via</i> Umballa and Amritsar	58 2	29 2
From Delhi <i>via</i> Bhatinda, Ferozepore to Lahore, returning <i>via</i> Amritsar Umballa to Delhi	56 15	28 8
From Calcutta to Darjeeling and return	101 0	50 8
From Colombo to Kandy and return	13 8	9 0
From Kurda Road to Puri (Jagganath and return)	5 4	2 10

(All fares subject to change without previous notice.)

LIST OF HOTELS IN INDIA.

The following list of hotels is largely based on information kindly supplied by Messrs. Thos. Cook & Son, Bombay:—

AGRA.—Cecil, Laurie's Great Northern, Metro-pole, Carlton.

AHMEDABAD.—Grand, Empire.

ALAHABAD.—Central, Grand.

BANGALORE.—West End, Cubbon.

BENARES.—Clark's, Hotel de Paris.

BOMBAY.—Taj Mahal, Majestic, Apollo, Watson's.

CALCUTTA.—Great Eastern, Grand, Spence's, Continental.

CAWNPORE.—Civil and Military.

DELHI.—Cecil, Maiden's, Civil and Military.

GOA.—Crescent.

GULMARG.—Nedou's.

GWALIOR.—Gwalior Hotel.

HYDERABAD (Deccan).—Montgomery's.

JEYPURE.—Jeypore, Kaisar-i-Hind, The New Hotel.

JUBBULPORE.—Jackson's.

KARACHI.—North-Western, Killarney

LAHORE.—Nedou's, Cecil.

LUCKNOW.—Royal, Carlton, Imperial, Civil and Military.

MADRAS.—Hotel D'Angelis, Connemara, Brind's

MANDALAY.—Salween House.

MEERUT.—Empress.

PESHAWAR.—Flashmans.

POONA.—Napier, Poona, Connaught.

RANGOON.—Strand, Royal, Minto Mansions.

RAWAL PINDI.—Flashmans, Imperial.

SEUNDERABAD.—Montgomery's.

HOTELS IN PRINCIPAL HILL STATIONS:—

COONOOR.—Glenview.

DARJEELING.—Woodland's, Mount Everest, Grand (Rockville), Drum Druid.

MAHABLESHWAR.—Race View.

MASHOBRA.—Wild Flower Hall.

MATHERAN.—Rugby.

MOUNT ABU.—Rajputana.

MURREE.—Powell's, Rowbury's, Viewforth

MUSSOORIE.—Charleville, Savoy.

NAINI TAL.—Metro-pole, Grand.

OOTACAMUND.—Syk's, Centre, Firgrove.

PACHMARHI.—Hill.

SIMLA.—Corstorphon's, Grand, Lauries, Long-wood, Faletti's, Royal.

An Indian Glossary.

- ABKARI.**—Excise of liquors and drugs.
- AIN.**—A timber tree, *TERMINALIA TOMENTOSA*.
- AMIL.**—A subordinate executive official under native rule; in Sind the name is still applied to Hindus of the clerical class.
- ANICUT.**—A dam or weir across a river for irrigation purposes, Southern India.
- ANJUMAN.**—A communal gathering of Mahomedans.
- APHUS.**—Believed to be a corruption of ALPHONSE, the name of the best variety of Bombay mango.
- AUS.**—The early rice crop, Bengal; syn. *Ahu*, Assam.
- AVATAR.**—An incarnation of Vishnu.
- BABU.**—(1) A gentleman in Bengal, corresponding to *Pant* in the Deccan and Konkan.
(2) Hence used by Anglo-Indians of a clerk or accountant.
- BABUL.**—A common thorny tree, the bark of which is used for tanning, *ACACIA ARABICA*.
- BAGHLA.**—(1) A native boat (*Buggalow*).
(2) The common pond heron or paddybird.
- BAIRAGI.**—A Hindu religious mendicant.
- BAJRA** or **BAJRI.**—The bulrush millet, a common food-grain, *PENNISSETUM TYPHOIDEUM*; syn. *cambu*, Madras.
- BAND.**—A dam or embankment (*Bund*).
- BANYAN.**—A species of fig-tree, *FICUS BENGALENSIS*.
- BARSAT.**—(1) A fall of rain, (2) the rainy season.
- BASTI.**—(1) A village, or collection of huts, (2) A Jain temple, Kanara.
- BATTA.**—Lit. 'discount,' and hence allowances by way of compensation.
- BAZAR.**—(1) A street lined with shops, India proper; (2) a covered market, Burma.
- BER.**—A thorny shrub bearing a fruit like a small plum, *ZIZYPHUS JUJUBA*.
- BEWAR.**—Name in Central Provinces for shifting cultivation in jungles and hill-sides; syn. *taungya*, Burma; *jhum*, North-Eastern India.
- BHADOI.**—Early autumn crop, Northern India, reaped in the month *Bhadon*.
- BHANG.**—The dried leaves of the hemp plant, *CANNABIS SATIVA*, a narcotic.
- BHANWAR.**—Light sandy soil; syn. *bhur*.
- BHARAL.**—A Himalayan wild sheep, *OVIS NAHURA*.
- BHENDI.**—A succulent vegetable (*HIBISCUS ESCULENTUS*).
- BHUSA.**—Chaff, for fodder.
- BHUT.**—The spirit of departed persons.
- BIDRI.**—A class of ornamental metalwork, in which blackened pewter is inlaid with silver, named from the town of Bidar, Hyderabad.
- BIGHA.**—A measure of land, varying widely; the standard *bigha* is generally five-eighths of an acre.
- BIR (BID).**—A grassland—North India.
- BLACK COTTON SOIL.**—A dark-coloured soil, very retentive of moisture, found in Central and Southern India.
- BOARD OF REVENUE.**—The chief controlling revenue authority in Bengal, the United Provinces and Madras.
- BOR.**—See *BER*.
- BRINJAL.**—A vegetable, *SOLANUM MELONGENA*; syn. *egg-plant*.
- BUNDER**, or **bandar.**—A harbour or port.
- BURUJ.**—A bastion in a line of battlements.
- CADJAN.**—Palm leaves, used for thatch.
- CHABUTRA.**—A platform of mud or plastered brick, used for social gatherings, Northern India.
- CHADAR.**—A sheet worn as a shawl by men and sometimes by women. (*Chudder*.)
- CHAITYA.**—An ancient Buddhist chapel.
- CHAMBAR (CHAMAR).**—A caste whose trade is to tan leather.
- CHAMPAK.**—A tree with fragrant blossoms, *MICHELIA CHAMPACA*.
- CHAPATI.**—A cake of unleavened bread. (*Chaupatti*.)
- CHAPRASI.**—An orderly or messenger, Northern India; syn. *pattawala*, Bombay; *peon*, Madras.
- CHARAS.**—The resin of the hemp plant, *CANNABIS SATIVA*, used for smoking.
- CHARPAI (charpoy)**—A bedstead with four legs, and tape stretched across the frame for a mattress.
- CHAUDHRI.**—Under native rule, a subordinate revenue official; at present the term is applied to the headman or representative of a trade guild.
- CHAUKIDAR.**—The village watchman and rural policeman.
- CHAUTH.**—The fourth part of the land revenue, exacted by the Marathas in subject territories.
- CHELA.**—A pupil, usually in connexion with religious teaching.
- CHHAONI.**—A collection of thatched huts or barracks; hence a cantonment.
- CHHATRI.**—(1) An umbrella, (2) domed building such as a cenotaph.

Note.—According to the Hunterian system of transliteration here adopted the vowels have the following values:—a either long as the a in 'father,' or short as the u in 'cut,' e as the ai in 'gain,' i either short as the i in 'bib,' or long as the ee in 'feel,' o as the o in 'bone,' u either short as the oo in 'good,' or long as the oo in 'boot,' ai as the i in 'mile,' au as the ou in 'grouse.' This is only a rough guide. The vowel values vary in different parts of India in a marked degree. The consonantal values are too intricate for discussion here.

CHIEF COMMISSIONER.—The administrative head of one of the lesser Provinces in British India.

CHIKOR.—A kind of partridge, *CACCABIS CHUCAR*.

CHIKU.—The Bombay name for the fruit of *ACHRAS SAPOTA*, the Sapodilla plum of the West Indies.

CHINAR.—A plane tree, *PLATANUS ORIENTALIS*.

CHINKARA.—The Indian gazelle, *GAZELLA BENNETTI*, often called 'ravine deer.'

CHITAL.—The spotted deer, *CERVUS AXIS*.

CHOLAM.—Name in Southern India for the large millet, *ANDROPOGON SORGHUM*; syn. jowar.

CHOLI.—A kind of short bodice worn by women.

CHUNAM, chuna.—Lime plaster.

CIRCLE.—The area in charge of—(1) A Conservator of forests; (2) A Postmaster or Deputy Postmaster-General; (3) A Superintending Engineer of the Public Works Department.

CIVIL SURGEON.—The officer in medical charge of a District.

COGNIZABLE.—An offence for which the culprit can be arrested by the police without a warrant.

COLLECTOR.—The administrative head of a District in Regulation Provinces corresponding to the Deputy Commissioner in non-regulation areas.

COMMISSIONER.—(1) The officer in charge of a Division or group of Districts; (2) the head of various departments, such as Stamps, Excise, etc.

COMPOUND.—The garden and open land attached to a house. An Anglo-Indian word perhaps derived from 'kumpan', a hedge.

CONSERVATOR.—The Supervising Officer in charge of a Circle in the Forest Department.

COUNCIL BILLS.—Bills or telegraphic transfers drawn on the Indian Government by the Secretary of State in Council.

COUNT.—Cotton yarns are described as 20's, 30's, etc., counts when not more than a like number of hanks of 840 yards go to the pound avoirdupois.

COURT OF WARDS.—An establishment for managing estates of minors and other disqualified persons.

CRORE, karor.—Ten millions.

DAFFADAR.—A non-commissioned native officer in the army or police.

DAH OR DAO.—A cutting instrument with no point, used as a sword, and also as an axe, Assam and Burma.

DAK (dawk).—A stage on a stage coach route. Dawk bungalow is the travellers' bungalow maintained at such stages in days before railway came.

DAKAITI, DAGOITY.—Robbery by five or more persons.

DAL.—A generic term applied to various pulses.

DAM.—An old copper coin, one-fortieth of a rupee.

DARBAR.—(1) A ceremonial assembly, especially one presided over by the Ruler of a State, hence (2) the Government of a Native State.

DARGAH.—A Mahomedan shrine or tomb of a saint.

DARI, Dhurrie.—A rug or carpet, usually of cotton, but sometimes of wool.

DAROGHA.—The title of officials in various departments; now especially applied to subordinate controlling Officers in the Police and Jail Departments.

DARWAN.—A door-keeper.

DARWAZA.—A gateway.

DEBOTTAR.—Land assigned for the upkeep of temples or maintenance of Hindu worship.

DEODAR.—A cedar, *CEDRUS LIBANI* or *C. DEODARA*.

DEPUTY COMMISSIONER.—The Administrative head of a District in non-regulation areas corresponding to the Collector in Regulation Provinces.

DEPUTY MAGISTRATE AND COLLECTOR.—A subordinate of the Collector, having executive and judicial (revenue and criminal) powers; equivalent to Extra Assistant Commissioner in non-regulation areas.

DESAI.—A revenue official under native (Maratha) rule.

DESH.—(1) Native country; (2) the plains as opposed to the hills, Northern India; (3) the plateau of the Deccan above the Ghats.

DESHMUH.—A petty official under native (Maratha) rule.

DEVA.—A deity.

DEVASTHAN.—Land assigned for the upkeep of a temple or other religious foundation.

DHAK.—A tree, *BUTEA FRONDOSA*, with brilliant orange-scarlet flowers used for dyeing, and also producing a gum; syn. palas, Bengal and Bombay; Chhiul, Central India.

DHAMANI.—A heavy shighram or tonga drawn by bullocks.

DHARMSALA.—A charitable institution provided as a resting-place for pilgrims or travellers, Northern India.

DHATURA.—A stupefying drug, *DATURA FASTUOSA*.

DHENKLI.—Name in Northern India for the lever used in raising water; syn. picottah.

DHOBI.—A washerman.

DHOTI.—The loincloth worn by men.

DISTRICT.—The most important administrative unit of area.

DIVISION.—(1) A group of districts for administrative and revenue purposes, under a Commissioner; (2) the area in charge of a Deputy Conservator of Forests, usually corresponding with a (revenue) District; (3) the area under a Superintendent of Post Offices; (4) a group of (revenue) districts under an Executive Engineer of the Public Works Department.

DIWAN.—The chief minister in a Native State.

DIWANI.—Civil, especially revenue, administration; now used generally in Northern India of civil justice and Courts.

DOAB.—The tract between two rivers, especially that between the Ganges and Jumna.

DRY CROP.—A crop grown without artificial irrigation.

DRY RATE.—The rate of revenue for unirrigated land.

DUN.—A valley, Northern India.

EKKA.—A small two-wheeled conveyance drawn by a pony, Northern India.

EXTRA ASSISTANT COMMISSIONER.—See Deputy Magistrate and Collector.

FAKIR.—Properly an Islamic mendicant or a mendicant who has no creed, but often loosely used of Hindu mendicants also.

FAMINE INSURANCE GRANT.—An annual provision from revenue to meet direct famine expenditure, or the cost of certain classes of public works, or to avoid debt.

FARMAN.—An imperial (Mughal) order or grant.

FAUJDARI.—Under native rule, the area under a Faujdar or subordinate governor; now used generally of Magistrates' Criminal Courts.

FINANCIAL COMMISSIONER.—The chief controlling revenue authority in the Punjab, Burma and the Central Provinces.

GADDI, GADI.—The cushion or throne of (Hindu) royalty.

GANJA.—The unfertilised flowers of the cultivated female hemp plant, *CANNABIS SATIVA*, used for smoking.

GAUR.—Wild cattle, commonly called 'bison', *BOS GAURUS*.

GAYAL.—A species of wild cattle, *BOS FRONTALIS*, domesticated on the North-East Frontier; syn. mithan.

GHAT, Ghaut.—(1) A landing-place on a river; (2) the bathing steps on the bank of a tank; (3) a pass up a mountain; (4) in European usage, a mountain range. In the last sense especially applied to the Eastern and Western Ghats.

GHATWAL.—A tenure-holder who originally held his land on the condition of guarding the neighbouring hill passes (ghats), Bengal.

GHI, Ghee.—Clarified butter.

GINGELLY.—See *TIL*.

GODOWN.—A store room or warehouse. An Anglo-Indian word derived from the Malay 'gadang'.

GOPURAM.—A gateway, especially applied to the great temple gateways in Southern India.

GOSAIN, Goswami.—A (Hindu) devotee; lit. one who restrains his passions.

GOSHA.—Name in Southern India for 'caste' women; lit. 'one who sits in a corner'; syn. *parda*.

GRAM.—A kind of pea, *CICER ARIETINUM*. In Southern India the pulse *DOLICHOS BIFLORUS* is known as horse gram.

GUARANTEED.—(1) A class of Native States in Central India; (2) A class of railways.

GUNJ.—The red seed with a black 'eye' of *ABRUS PRECATORIUS*, a common wild creeper, used as the official weight for minute quantities of opium 12th *TOLA*.

GUR, Goor.—Crude sugar; syn. jaggery, southern India; tanyet, Burma.

GURAL.—A Himalayan goat antelope, *CEMAS GORAL*.

GURU.—(1) A Hindu religious preceptor; (2) a schoolmaster, Bengal.

HAJ.—Pilgrimage to Mecca.

HAJJI.—A mahomedan who has performed the haj. He is entitled to dye his beard red.

HAKIM.—A native doctor practising the Mahomedan system of medicine.

HALALKHOR.—A sweeper or scavenger; lit. one to whom everything is lawful food.

HALI.—Current. Applied to coin of Native States, especially Hyderabad.

HAMAL.—(1) A porter or cooly, (2) a house servant.

HEJIRA, (HIJRAH).—The era dating from the flight of Mahomed to Mecca, June 20th, 622 A.D.

HILSA.—A kind of fish, *CLUPEA ILISHA*.

HTI.—An iron pinnacle placed on a pagoda in Burma.

HUKKA, HOOKAH.—The Indian tobacco pipe.

INDAH.—An enclosed place outside a town where Mahomedan services are held on festivals known as the *Id.*, etc.

INAM.—Lit. 'reward'. Hence land held revenue free or at a reduced rate, often subject to service. See *DEVASTHAU, SARAJAM, WATAN*.

INUNDATION CANAL.—A channel taken off from a river at a comparatively high level, which conveys water only when the river is in flood.

JACK FRUIT.—Fruit of *ARTOCARPUS INTEGRIFOLIA*, var. *PHANAS*.

JAGGERY, jagri.—Name in Southern India for crude sugar; syn. *gur*.

JAGIR.—An assignment of land, or of the revenue of land held by a Jagirdar.

JEMADAR.—A native officer in the army or police.

JHIL.—A natural lake or swamp, Northern India; syn. *bil*, Eastern Bengal and Assam.

JIHAD.—A religious war undertaken by Musalmans.

JIRGA.—A council of tribal elders, North-West frontier.

JOWAR.—The large millet, a very common food-grain, *ANDROPOGON SORGHUM*, or *SORGHUM VULGARE*; syn. *cholam* and *jola*, in Southern India.

JUDICIAL COMMISSIONER.—An officer exercising the functions of a High Court in the Central Provinces, Oudh, and Sind.

KACHERI, kachahri.—An office or office building, especially that of a Government official.

KADAR, karbi.—The straw of jowari (*q. v.*)—a valuable fodder.

KAJU, kashew.—The nut of *ANACARDIUM OCCIDENTALE* largely grown in the Konkan.

KAKAR.—The barking deer, *CERVULUS MUNTJAC*.

KALAR, kallar.—Barren land covered with salt or alkaline efflorescences, Northern India.

KAMARBAND, Cumberbund.—A waistcloth, or belt.

KANAT.—The wall of a large tent.

KANGAR.—A kind of portable warming-pan, carried by persons in Kashmir to keep themselves warm.

KANKAR.—Nodular limestone, used for metal-ling roads, as building stones or for preparation of lime.

KANS.—A coarse glass which spreads and prevents cultivation especially in Bundelkhand, SACCHARUM SPONTANEUM.

KANUNGO.—A revenue Inspector.

KARAIT.—A very venomous snake, BUN-GARUS CANDIDUS or CAERULEUS.

KARBHARI.—A manager.

KAREZ.—Underground tunnels near the skirts of hills, by which water is gradually led to the surface for irrigation, especially in Baluchistan.

KARKUN.—A clerk or writer, Bombay.

KARMA.—The doctrine that existence is conditioned by the sum of the good and evil actions in past existences.

KARNAM.—See PATWARI.

KAZI.—Under native rule, a judge administering Mahomedan law. Under British rule, the kazi registers marriages between Mahomedans and performs other functions, but has no powers conferred by law.

KHALASI.—A native fireman, sailor, artilleryman, or tent-pitcher.

KHALSA.—Lit. 'pure.' (1) Applied especially to themselves by the Sikhs, the word Khalsa being equivalent to the Sikh community; (2) land directly under Government as opposed to land alienated to grantees, etc., Northern India.

KHANDI, candy.—A weight especially used for cotton bales in Bombay—equivalent to 20 mds.

KHARAB.—In Bombay of any portion ran assessed survey No. which being uncultivable is left unassessed.

KHARIF.—Any crops sown just before or during the main S. W. monsoon.

KHAS.—Special, in Government hands. Khas tahasildar, the manager of a Government estate.

KHASADAR.—Local levies of foot soldiers, Afghanistan.

KHAS-KHAS, Kus-Kus.—A grass with scented roots, used for making screens which are placed in doorways and kept wet to cool a house by evaporation, ANDROPOGON SQUAR-ROSUS.

KHEDDA, kheda.—A stockade into which wild elephants are driven; also applied to the operations for catching.

KHICHADI, kejjeree.—A dish of cooked rice and other ingredients, and by Anglo-Indians specially used of rice with fish.

KHILAT.—A robe of honour.

KHUTBA.—The weekly prayer for Mahomedans in general and for the reigning sovereign in particular.

KILLA.—A fort.

KINCOB, kamkhwab.—Silk textiles brocaded with gold or silver.

KODALI.—The implement like a hoe or mattock in common use for digging; syn. mamuti, Southern India.

KONKAN.—The narrow strip of low land between the Western ghats and the sea.

KOS.—A variable measure of distance, usually estimated at about two miles. The distance between the kos-minars or milestones on the Mughal Imperial roads averages a little over 2 miles, 4 furlongs, 150 yards.

KOT.—Battlements.

KOTHI.—A large house.

KOTWAL.—The head of the police in a town, under native rule. The term is still used in Hyderabad and other parts of India.

KOTWALI.—The chief police station in a head-quarters town.

KULKARNI.—See PATWARI.

KUMBHAR.—A potter.

KURAN.—A big grass land growing grass fit for cutting.

KYARI.—Land embanked to hold water for rice cultivation.

KYAUNG.—A Buddhist monastery, which always contains a school, Burma.

LAKH, lac.—A hundred thousand.

LAMBARDAAR.—The representative of the co-sharers in a zamindari village, Northern India.

LANGUR.—A large monkey, SEMNOPITHECUS ENTELLUS.

LASCAR, correct lashkar.—(1) an army, (2) in English usage a native Sailor.

LAT.—A monumental pillar.

LATERITE.—A vesicular material formed of disintegrated rock, used for buildings and making roads; also probably valuable for the production of aluminium. Laterite produces a deep brichord soil.

LINGAM.—The phallic emblem, worshipped as the representative of Shiva.

LITCHI.—A fruit tree grown in North India (LITCHI CHINENSIS).

LOKAMANYA.—(lit.) Esteemed of the world or the people; a national hero.

LONGYI.—A waistcloth, Burma.

LOTA.—A small brass water-pot.

LUNGI, loongi.—(1) A turban; (2) a cloth worn by women.

MADRASA.—A school especially one for the higher instruction of Mahomedans.

MAHAJAN.—The guild by Hindu or Jain merchants in a city. The head of the Mahajansi, the Nagarsheth (*q. v.*).

MAHAL.—(1) Formerly a considerable tract of country; (2) now a village or part of a village for which a separate agreement is taken for the payment of land revenue; (3) a department of revenue, *e.g.*, right to catch elephants, or to take stone; (4) in Bombay a small Taluka under a MAHALKARI.

MAHANT.—The head of a Hindu conventual establishment.

MAHARAJA.—A title borne by Hindus, ranking above Raja.

MAHATMA.—(lit.) A great soul; applied to men who have transcended the limitations of the flesh and the world.

MAHSEER, mahasir.—A large carp, BARBUS FOR (lit. 'the big-headed').

MAHUA.—A tree, *BASSIA LATIFOLIA*, producing flowers used (when dried) as food or for distilling liquor, and seeds which furnish oil.

MAIDAN.—An open space of level ground; the park at Calcutta.

MAJOR WORKS.—Irrigation works for which separate accounts are kept of capital, revenue, and interest.

MAKTAB.—An elementary Mahomedan school.

MALGUZAR (revenue payer).—(1) The term applied in the Central Provinces to a co-sharer in a village held in ordinary proprietary tenure; (2) a cultivator in the Chamba State.

MALI.—A gardener.

MAMLATDAR.—The officer in charge of a taluka, Bombay, whose duties are both executive and magisterial; syn. tahasildar.

MANDAP, or **mandapam.**—A porch or pillared hall, especially of a temple.

MANGOSTEEN.—The fruit of *GARCINIA MANGOSTANA*.

MARKHOR.—A wild goat in North Western India, *CAPRA FALCONERI*.

MASJID.—A mosque. *Jama Masjid*, the principal mosque in a town, where worshippers collect on Fridays.

MASNAD.—Seat of state or throne, Mahomedan; syn. gaddi.

MATH.—A Hindu conventual establishment.

MAULVI.—A person learned in Muhammadan law.

MAUND, ver. *Man.*—A weight varying in different localities. The Ry. maund is 80 lbs.

MAYA.—Sanskrit term for delusion.

MEHEL or **MAHAL.**—A palace.

MELA.—A religious festival or fair.

MIHRAB.—The niche in the centre of the western wall of a mosque.

MIMBAR.—Steps in a mosque, used as a pulpit.

MINAR.—A pillar or tower.

MINOR WORKS.—Irrigation works for which regular accounts are not kept, except, in some cases, of capital.

MISTRI.—(1) a foreman, (2) a cook.

MONSOON.—Lit. 'season,' and specifically (1) The S. W. monsoon, which is a Northward extension of the S. E. trades, which in the Northern Summer cross the equator and circulate into and around the low pressure area over North India, caused by the excessive heating of the land area, and (2) The N. E. monsoon, which is the current of cold winds blowing down during the Northern winter from the cold land areas of Central Asia, giving rain in India only in S. E. Madras and Ceylon through moisture acquired in crossing the Bay of Bengal, and passing across the equator into the low pressure areas of the Australasian Southern summit.

MUFASSAL, **mufussil.**—The outlying parts of a District, Province or Presidency, as distinguished from the head-quarters (*Sadr*).

MUKADDAM, **muccadam.**—A representative or headman.

MUKHTAR (corruptly *mukhtiar*).—(1) A legal practitioner who has not got a sanad, and therefore cannot appear in court as of right; (2) any person holding a power of attorney on behalf of another person.

MUKHTIARKAR.—The officer in charge of a taluka, Sind, whose duties are both executive and magisterial; syn. tahasildar.

MUKTI, 'release.'—The perfect rest attained by the last death and the final reabsorption of the individual soul into the world—soul, syn. *NIRVANA*, *MOKSHA*.

MUNG, **mug.**—A pulse, *PHASEOLUS RADIATUS*; syn. mag, Gujarat.

MUNJ.—(1) A tall grass (*SACCHARUM MUNJA* in North India, from which mats are woven, and the Brahman sacred thread worn; (2) the said thread.

MUNSHI.—A teacher of Hindustani or any Perso-Arabian language.

MUNSIFF.—Judge of the lowest Court with civil jurisdiction.

MURUM, **moorum.**—Gravel, used for metal-ling roads.

NACHANI-NAGLI.—See *RAGI*.

NAGARKHANA, **Nakkarkhana.**—A place where drums are beaten.

NAGARSHETH.—The head of the trading guild of Hindu and Jain Merchants in a city.

NAIB.—Assistant or Deputy.

NAIK.—A leader, hence (1) a local chieftain, in Southern India; (2) a native officer of the lowest rank (corporal) in the Indian army.

NAT.—A demon or spirit, Burma.

NAWAB.—A title borne by Musalmans, corresponding roughly to that of *Raja* among Hindus.

NAZAR, **nazarana.**—A due paid on succession or on certain ceremonial occasions.

NET ASSETS.—(1) In Northern India, the rent or share of the gross produce of land taken by the landlord; (2) in Madras and Lower Burma, the difference between the assumed value of the crop and the estimate of its cost of production.

NEWAR.—Broad cockney woven across bedsteads instead of iron slats.

NGAPI.—Pressed fish or salted fish paste largely made and consumed in Burma.

NILGAI.—An antelope, *BOSELAPHUS TRAGOCAMELUS*.

NIM, **neem.**—A tree, *MELIA AZADIRACHTA*, the berries of which are used in dyeing.

NIRVANA.—See *MUKTI*.

NIZAM.—A title borne by the ruler of Hyderabad State.

NIZAMAT.—A sub-division of a Native State, corresponding to a British District, chiefly in the Punjab and Bhopal.

NON-AGRICULTURAL ASSESSMENT.—Enhanced assessment imposed when land already assessed as agricultural is diverted to use as a building site or for industrial concerns.

NON-COGNISABLE.—An offence for which the culprit cannot be arrested by the police without a warrant.

NON-OCCUPANCY TENANTS.—A class of tenants with few statutory rights, except in Oudh, beyond the terms in their leases or agreements.

NON-REGULATION.—A term formerly applied to certain Provinces to show that the regulations of full code of legislation was not in force in them.

NULLAH, NALA.—A ravine, watercourse, or drain.

OCCUPANCY TENANTS.—A class of tenants with special rights in Central Provinces, in United Provinces.

PADAUK.—A well known Burmese tree (*PTEROCARPUS* sp.) from the behaviour of which the arrival of the monsoon is prognosticated.

PADDY.—Unhusked rice.

PAGA.—A troop of horses among the Marathas.

PAGL.—A tracker thieves of strayed or stolen animals.

PAIGAH.—A tenure in Hyderabad State.

PAIK.—(1) A foot soldier; (2) in Assam formerly applied to every free male above sixteen years.

PAIRIEE.—The name of the second best variety of Bombay mango, distinguishable from the *APHUS* (*q. v.*) by its pointed tip, and by the colour being less yellow and more green and red.

PALAS.—See **DHAK**.

PALKI.—A palanquin or litter.

PAN.—The betel vine, **PIPE BETLE**.

PARAB.—A public place for the distribution of water, maintained by charity.

PARABADI.—A platform with a smaller platform like a dovecot on a centre pole or pillar built and endowed or maintained by charity, where grain is put every day for animals and birds.

PANCHAMA.—Low caste, Southern India.

PANCHAYAT.—(1) A committee for management of the affairs of a caste, village, or town; (2) arbitrators. Theoretically the panchayat has five (*panch*) members.

PANDIT.—A Hindu title, strictly speaking applied to a person versed in the Hindu scriptures, but commonly used by Brahmans. In Assam applied to a grade of Inspectors of primary schools.

PANSUPARI.—Distribution of **PAN** and **SUPARI** (*q. v.*) as a form of ceremonial hospitality.

PARDA, purdah.—(1) A veil or curtain; (2) the practice of keeping women secluded; syn. **gosha**.

PARDESI.—Foreign. Used in Bombay especially of Hindu servants, syces, &c., from North India.

PARGANA.—Fiscal area or petty sub-division of a tahsil, Northern India.

PASHM.—The fine wool of the Tibetan goat.

PASO.—A waistcloth.

PAT, put.—A stretch of firm, hard clay.

PATEL.—A village headman, Central and Western India; syn. **reddi**, Southern India, **gaonbura**, Assam; **padhan**, Northern and Eastern India: **Mukhi**, Guzarat.

PATIDAR.—A co-sharer in a village, Gujarat

PATTAWALLA.—See **CHAPRASI**.

PATWARI.—A village accountant; syn. **karnam**, Madras; **kulkarni**, Bombay Deccan; **talati**, Gujarat; **shanhog**, Mysore, Kanara and Coorg; **Mandal**, Assam; **Tapedar**, Sind.

PEON.—See **CHAPRASI**.

PESHKASH.—A tribute or offering to a superior.

PHULAY, (Pilow).—A dish of rice and other ingredients, and by Anglo-Indians specifically used of chicken with rice and spices.

PHULKARI.—An embroidered sheet; lit. flower-work.

PICE, paisa.—A copper or bronze coin worth one farthing; also used as a generic term for money.

PICOTTAH.—A lever for raising water in a bucket for irrigation, Southern India; syn. **dhenkul** or **dhenkuli**, or **dhikli**, Northern India.

PIPAL.—A sacred tree, **FICUS RELIGIOSA**.

PIR.—A Mahomedan religious teacher or saint.

PLEADER.—A class of legal practitioner.

PONGYI.—A Buddhist monk or priest, Burma.

POSTIN, poshteen.—A coat or rug of sheepskin tanned with the wool on, Afghanistan.

PRANT.—An administrative sub-division in Maratha States, corresponding to a British District (**Baroda**) or Division (**Gwalior**); also in **Kathiawar**.

PRESIDENCY.—A former Division of British India.

PROTECTED.—Forests over which a considerable degree of supervision is exercised, but less than in the case of 'reserved' forests.

PROVINCE.—One of the large Divisions of British India.

PUJA.—Worship, Hindu.

PUJARI.—The priest attached to a temple.

PUNDIT.—See **Pandit**.

PURANA.—Lit. 'old' Sanskrit (1) applied to certain Hindu religious books, (2) to a geological 'group'; (3) also to 'punch-marked' coins.

PUROHIT.—A domestic chaplain or spiritual guide, Hindu.

PWE.—An entertainment, Burma.

RABE.—Any crop sown after the main South-West monsoon.

RAGI (PLEUSINE COROCANA).—A small millet used as a food-grain in Western and Southern India; syn. **marua**, **Nagli Nachni**.

RAJA.—A title borne by Hindus and occasionally by Musalmans, corresponding roughly to that of **Nawab** which is peculiar to Musalmans.

RAMOSHI.—A caste whose work is watch and ward in the village lands and hence used of any **chaukidar** (*q. v.*).

RANA.—A title borne by some Rajput chiefs, equivalent to that of **Raja**.

RANI.—The wife or widow of a **Raja**.

RAO.—A title borne by Hindus, either equivalent to, or ranking below, that of **Raja**.

REGAR.—Name for a black soil in Central and Southern India, which is very retentive of moisture, and suitable for growing cotton.

REGULATION.—A term formerly applied to certain provinces to show that the Regulations or full code of legislation applied to them.

REH.—Saline or alkaline efflorescences on the surface of the soil, Northern India.

RESERVED.—Forests intended to be maintained permanently.

RICKSHAW.—A one or two seat vehicle on two wheels drawn by coolies, used in the hills.

ROHU.—A kind of fish, *LABEO ROHITA*.

RYOTWARI.—The system of tenure in which land revenue is imposed on the actual occupants of holdings.

SADR, sudder.—Chief (adjective). Hence the headquarters of a District; formerly applied to the Appellate Courts.

SAFFLOWER.—A thistle which yields a yellow dye from its petals and oil from its seeds (*CARTHAMUS TINCTORIUS*), ver. Kardai, Kushanti.

SAL.—A useful timber tree in Northern India, *SHOREA ROBUSTA*.

SAMBAR.—A deer, *CERVUS UNICOLOR*; syn. jarau.

SAN.—Bombay hemp, *CROTALARIA JUNCEA*.

SANAD.—(1), A charter or grant, giving its name to a class of States in Central India held under a sanad, (2) any kind of deed of grants.

SANNYASI.—A Hindu mendicant.

SARI.—A long piece of cloth worn by women as a shawl.

SARANJAM.—Land held revenue free or on a reduced quit-rent in consideration of political services rendered by the holder's ancestors.

SARKAR.—(1) The Government; (2) a tract of territory under Muhammadan rule, corresponding roughly to a Division under British administration.

SARSUBAH.—An officer in charge of a Division in the Baroda State corresponding to Commissioner of British territories.

SATI.—Suicide by a widow, especially on the funeral pyre of her husband.

SATYAGRAHA.—(lit.) One possessed by the truth; one who follows the truth wherever it may lead. (Commonly used to denote the passive resistance movement.)

SAWBWA.—A title borne by chiefs in the Shan States, Burma.

SEMAL or cotton tree.—A large forest tree with crimson flowers and pods containing a quantity of floss, *BOMBAY MALABARICUM*.

SEROW, sarau.—A goat antelope, *NEMORHAEDUS BUBALINUS*.

SETTLEMENT.—(1) The preparation of a cadastral record, and the fixing of the Government revenue from land; (2) the local inquiry made before Forest Reserves are created; (3) the financial arrangement between the Government of India and Local Governments.

SHANBHOG.—See **PATWARI**.

SHASTRAS.—The religious law-books of the Hindus.

SHEGADI, seggaree.—A pan on 3 feet with live charcoal in it.

SHER, ser, seer.—A weight, or measure varying much in size in different parts of the country. The Railway ser is about 2 lbs.

SHETH, shethia.—A Hindu or Jain merchant.

SHIGURAM.—See **TONGA**.

SHISHAM or **sisso.**—A valuable timber tree, *DALBERGIA SISSOO*.

SILLADAR.—A native trooper who furnishes his own horse and equipment.

SOLA.—A water-plant with a valuable pith, *AESCHYNOMENE ASPERA*.

SOWAR.—A mounted soldier or constable.

STUPA or **tope.**—A Buddhist tumulus, usually of brick or stone, and more or less hemispherical, containing relics.

SUBAH.—(1) A province under Mahomedan rule; (2) the officer in charge of a large tract in Baroda, corresponding to the Collector of a British District; (3) a group of Districts or Division, Hyderabad.

SUBAHDAR.—(1) The governor of a province under Mahomedan rule; (2) a native infantry officer in the Indian Army; (3) an official in Hyderabad corresponding to the Commissioner in British territory.

SUB-DIVISION.—A portion of a District in charge of a junior officer of the Indian Civil Service or a Deputy Collector.

SUPARI.—The fruit of the betel palm, *ARECA CATECHU*.

SUPERINTENDENT.—(1) The chief police officer in a District; (2) the official in charge of a hill station; (3) the official, usually of the Indian Medical Service, in charge of a Central Jail.

SURTI.—Native of Surat, specially used of persons of the Dhed or Mahar caste who work as house servants of Europeans, and whose house speech is Gujarati.

SYCE, sais.—A groom.

TABUT.—See **TAZIAH**.

TAHSIL.—A revenue sub-division of a District; syn. taluka, Bombay; taluka, Madras and Mysore; township, Burma.

TAHSILDAR.—The officer in charge of a tahsil; syn. Mamlatdar, Bombay; township officer or myo-ok, Burma; Mukhtiar, Sind; Vahvatdar, Baroda. His duties are both executive and magisterial.

TAKAVI.—Loans made to agriculturists for seed, bullocks, or agricultural improvements; syn. tagai, Bombay.

TALATI.—See **PATWARI**.

TALAV, or talao.—A lake or tank.

TALUK, taluka.—The estate of a talukdar in Oudh. A revenue sub-division of a District, in Bombay, Madras and Mysore; syn. tahsil.

TALUKDAR.—A landholder with peculiar tenures in different parts of India. (1) An official in the Hyderabad State, corresponding to the Magistrate and Collector (First Talukdar) or Deputy Magistrates and Collectors (Second and Third Talukdars); (2) a landholder with a peculiar form of tenure in Gujarat.

TAMTAM, tumtum.—A North Indian name for a light trap or cart.

TANK.—In Southern, Western, and Central India, a lake formed by damming up a valley; in Northern India, an excavation holding water.

TAPEDAR.—See PATWARI.

TARAI.—A moist swampy tract; the term especially applied to the tract along the foot of the Himalayas.

TARI, toddy.—The sap of the date, palmyra, or coconut palm, used as a drink, either fresh or after fermentation. In Northern India the juice of the date is called Sendhi.

TASAR, tussore.—Wild silkworms, *ANTHRAEA PAPHIA*; also applied to the cloth made from their silk.

TAZIA.—Lath and paper models of the tombs of Hasan and Husain, carried in procession at the Muharram festival; syn. tabut.

TEAK.—A valuable timber tree in Southern and Western India and Burma, *TECTONA GRANDIS*.

TELEGRAPHIC TRANSFERS.—See Council bills.

THAGI, thuggee.—Robbery after strangulation of the victim.

THAKUR.—(1) The modern equivalent of the caste name Kshatriya in some parts of Northern India; (2) a title of respect applied to Brahmans; (3) a petty chief; (4) a hill tribe in the Western Ghats.

THAMIN.—The brow-antlered deer Burma, *CERVUS ELDI*.

THANA.—A police station, and hence the circle attached to it.

TIKA.—(1) Ceremonial anointing on the forehead; (2) vaccination.

TIKAM.—The English pickaxe (of which the word is a corruption).

TIL.—An oilseed, *SESAMUM INDICUM*; also known as gingelly in Madras.

TINDAL, tandel.—A foreman, subordinate officer of a ship.

TIPAL, Teapoy.—A table with 3 legs, and hence used of any small European style table.

TOLA.—A weight equivalent to 180 grains (troy).

TONGA.—A one or two horsed vehicle with a covered top. syn. SHIGHRAM.

TSINE.—Wild cattle found in Burma and to the southward, *BOS SONDAICUS*; syn. hsaing and banteng.

UNIT.—A term in famine administration, denoting one person relieved for one day.

URIAL.—A wild sheep in North-Western India, *OVIS VIGNEI*.

URID, UDID.—A pulse, 'black grain,' (*PHASEOLUS MUNGO*).

UMBAR.—A wild pig—(*FICUS GLOMERATA*).

USAR.—Soil made barren by saline efflorescence, Northern India.

VAHIVATDAR.—Officer in charge of a revenue sub-division, with both executive and magisterial functions, Baroda; syn. tahsildar.

VAID or baidya, Bengal.—A native doctor practising the Hindu system of medicine.

VAKIL.—(1) A class of legal practitioner; (2) an agent generally.

VIHARA.—A Buddhist monastery.

VILLAGE.—Usually applied to a certain area demarcated by survey, corresponding roughly to the English parish.

VILLAGE UNION.—An area in which local affairs are administered by a small committee.

WADA or WADI.—(1) an enclosure with houses built round facing a centre yard; (2) private enclosed land near a village.

WAKF.—A Muhammadan religious or charitable endowment.

WAO.—A step well.

WATAN.—A word of many senses. In Bombay Presidency used mostly of the land or cash allowance enjoyed by the person who performs some service useful for Govt. or to the village community.

WAZIR.—The chief minister at a Mahomedan court.

WET RATE.—The rate of revenue for land assured of irrigation.

YOGI.—A Hindu ascetic who follows the yoga system, a cardinal part of which is that it confers complete control over the bodily functions enabling the practiser, for instance to breathe in through one nostril and out at the other.

YUNANI.—Lit. Greek; the system of medicine practised by Mahomedans.

ZAMINDAR.—A landholder.

ZAMINDARI.—(1) An estate; (2) the rights of a landholder, zamindar; (3) the system of tenure in which land revenue is imposed on an individual or community occupying the position of a landlord.

ZANANA.—The women's quarters in a house hence private education of women.

ZIARAT.—A Mahomedan shrine, North-Western Frontier.

ZILA.—A District.

The New Capital.

The transfer of the capital of India from Calcutta to Delhi was announced at the Delhi Durbar on December 12, 1911. The reasons for it were stated in despatches between the Government of India and the Secretary of State published at the time. It had long been recognised as necessary, in the interests of the whole of India, to de-provincialise the Government of India, but this ideal was unattainable as long as the Government of India was located in one Province, and in the capital of that Province—the seat of the Bengal Government—for several months in every year. It was also desirable to free the Bengal Government from the close proximity of the Government of India which had been to the constant disadvantage of that Province. To achieve these two objects the removal of the capital from Calcutta was essential: its disadvantages had been recognised as long ago as 1868, when Sir Henry Maine advocated the change. Various places had been discussed as possible capitals, but Delhi was by common consent the best of them all. Its central position and situation as a railway junction, added to its historical associations, told in its favour; and, as Lord Crewe said in his despatch on the subject, "to the races of India, for whom the legends and records of the past are charged with so intense a meaning, this resumption by the Paramount Power of the seat of venerable Empire should at once enforce the continuity and promise the permanency of British sovereign rule over the length and breadth of the country."

The foundation stones of the new capital were laid by the King Emperor on December 15, 1911, when His Majesty said:—"It is my desire that the planning and designing of the public buildings to be erected will be considered with the greatest deliberation and care so that the new creation may be in every way worthy of this ancient and beautiful city." Subsequently a **town-planning committee** was appointed—consisting of Captain G. S. C. Swinton, Chairman, and Mr. J. A. Brodie and Sir Edwin Lutyns, members—to advise on the choice of a site for, and the lay-out of, the capital. Mr. V. Lanchester was subsequently consulted by Government on some aspects of the question. The terms of their original engagement (subsequently renewed) were stated by the Under Secretary of State to be:—"The members of the committee will receive their travelling and living expenses, and the following fees for a five months' engagement:—Captain Swinton, 500 guineas; Mr. Brodie, 1,750 guineas; Sir Edwin Lutyns, 1,500 guineas. The Secretary of State has also undertaken to refund to the Corporation of Liverpool the amount of Mr. Brodie's salary for the period of the absence."

Delhi and its environs.—In their first report, dated from Simla, 13th June 1912, the Committee explain that, in dealing with the choice of a site, they felt that the following considerations were paramount and must receive the closest and most continual attention:—(a) Health and sanitation, (b) water-supply and irrigation supply, (c) the provision of ample room for expansion, (d) an extent

of land suitable for the location of buildings of various characters and sizes and for the provision of spacious parks and recreation grounds—to be assumed at 10 square miles for the New City and 15 square miles for the Cantonment—(e) Cost of land and the cost of executing necessary works on different sites, (f) facility for external and internal communication, (g) Civil and Military requirements.

On the east of the Jumna they found no suitable site. To the north of Delhi, on the west of the Jumna, where the Durbar camps were pitched they found some general advantages. The area is, for example, upwind and upstream from the present city of Delhi. The ruins and remains of the Delhis of the past do not cumber the ground. While the external communications might need improvement, the tract is fairly well served by existing railways. Roads and canals and the internal communication could be made convenient without excessive expenditure, and a good deal of money has already been spent on the area. But its disadvantages were found to be overwhelming. The site is too small and much of the land is liable to flooding. Similarly, the western slope of the hills to the south of Delhi, the Naraina plain, was found unsuitable, mainly because it cannot be considered to be Delhi, is destitute of historical associations, and is shut out from all view of Delhi.

Southern site chosen.—The Committee finally selected a site on the eastern slopes of the hills to the south of Delhi, on the fringe of the tract occupied by the Delhis of the past. They describe it as follows:—"Standing a little to the Delhi side of the village of Malcha, just below the hills almost in the centre of the site, and looking towards the Jumna, Shah-jahan's Delhi on the left fills the space between the ridge and the river. Following down from the present city on the foreshore of the riverain, Firoz Shah's Delhi, the site of Indra Prastha, Humayun's fort, Humayun's tomb and Nizamuddin's tomb take the eye in a continuous progress to the rocky eminence on which Ghiyasuddin Tughlak erected his fortress city. On the right the Lal Kot, the Kutb, the Kila Rai Pithora, Siri and Jahapanah complete the circle of the monuments of ancient Delhis. The mid space in the fore ground is filled by Safdar Jang's Mausoleum and the tombs of the Lodi dynasty, while to the left, towards Delhi, Jey Singh's gnomons and equatorial dials raise their fantastic shapes." The land chosen is free from liability to flood, has a natural drainage, and is not manworn. It is not cumbered with monuments and tombs needing reverent treatment, and the site is near the present centre of the town of Delhi.

Healthiness of Site.—In February, 1913, a Committee consisting of Surgn. General Sir C. P. Lukis, Mr. H. T. Keeling, C.S.I., A.M.I.C.E., and Major J. C. Robertson, I.M.S., was appointed to consider the comparative healthiness of the northern and southern sites. Their report, dated 4th March, 1913, states that "the Committee, after giving full consideration to the various points discussed in the above note, is bound to advise the Government of India that no doubt can exist as to the superior

healthiness of the southern site, the medical and sanitary advantages of which are overwhelming when compared with those of the northern site."

Report on Northern Site.—In the same month the Town-Planning Committee presented their second report, which dealt with the northern site. This had been elicited by the fact that in December, 1912, Sir Bradford Leslie, an engineer with a distinguished Indian career, had read a paper before the Indian section of the Royal Society of Arts in London, in which he set forth plans for building the new capital on the northern site and producing a fine water effect by a treatment of the river Jumna. This paper aroused considerable attention in England, and its publication synchronised with some letters and articles in the press in India expressing a preference for the northern site. The latter voiced a natural attraction to the north site which the Committee themselves experienced on their first visit to Delhi, and enunciated some predilections which the Committee had at one time felt and later abandoned. The Town Planning Committee, therefore, undertook to review once more, and in greater detail, the arguments for and against the northern site. They came to the conclusion that:—"The soil is poor on the northern site as compared with the southern. The southern site is already healthy and has healthy surroundings. The northern site even after expenditure on sanitary requirements will never be satisfactory. If the northern site is to be made healthy, this involves going outside the site itself and making the neighbourhood healthy also. The building land to the south is generally good. On the north to be used at all it has in places to be raised at considerable cost. There is no really suitable healthy site for a cantonment in proximity to a city on the northern site. The exigencies of fitting in the requirements to the limited area of the northern site endanger the success of a lay-out as a whole and tend to make for cramping and bad arrangement. The result of placing a city on the northern site appears to the Committee to be the creation of a bad example in place of a good one."

Final Town-Planning Report.—The final report of the Town-Planning Committee, with a plan of the lay-out, was dated 20th March, 1913. The central point of interest in the lay-out, which gives the motif of the whole, is Government House, and the large blocks of Secretariats. This Government centre has been given a position at Raisina hill near the centre of the new city. Advantage is taken of the height of this hill and it is linked with the high ground behind so as to appear a spur of the ridge itself. Behind the hill a raised platform or forum will be built. This will be flanked by the large blocks of Secretariat buildings and terminated at its western end by the mass of Government House with its wide flight of steps, portico and dome. The forum will be approached by inclined ways with easy gradients on both its north and south sides. The axis of the main avenue centres on the north-west gate of Indrapat nearly due east of Government House.

Looking from the eastern end of the forum where the broad avenue enters the Governmental centre and where the great stairways are set, the view is towards the east. "Right and left the roadways go and weld into one the empire of to-day with the empires of the past and unite Government with the business and lives of its people."

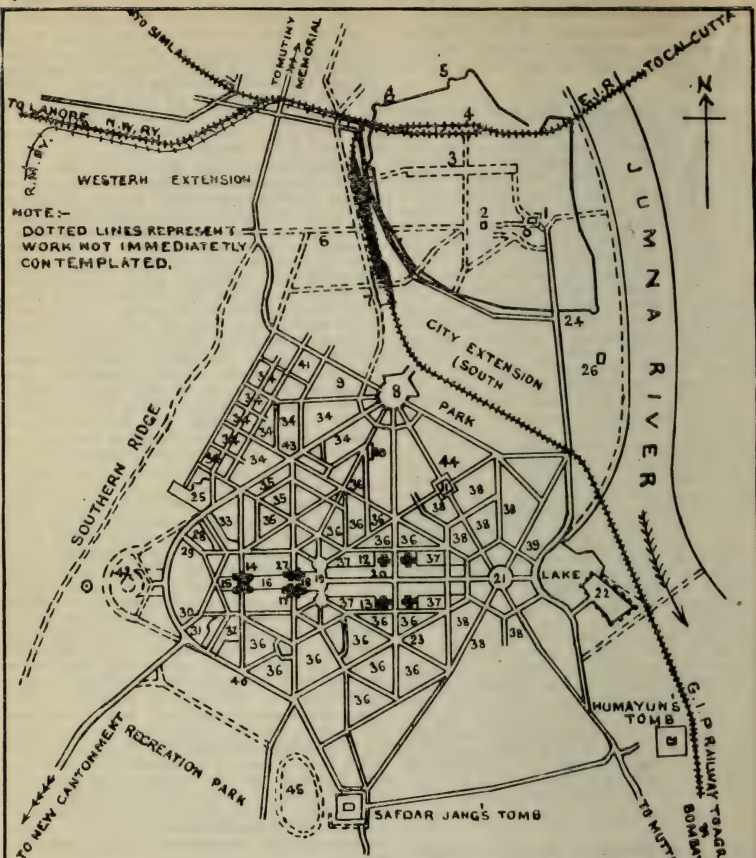

Behind Government House to the west will be its gardens and parks flanked by the general buildings belonging to the Viceregal estate. Beyond these again, on the ridge itself, will be a spacious amphitheatre to be made out of the quarry from which much of the stone for roads and buildings may be cut. Above this and behind it will lie the reservoir and its tower which will be treated so as to break the sky line of the ridge. To the east of the forum, and below it, will be a spacious forecourt defined by trees and linked on to the great main avenue or parkway which leads to Indrapat. Across this main axis, and at right angles to it, will run the avenue to the railway station. This will terminate in the railway station, the post office and business quarters at its northern end, and in the Cathedral at its southern extremity.

To the south-east will lie the park area in which stand the ancient monuments of Safdar Jang's Makhbara and the Lodi tombs. This area can be developed gradually as the city expands and has need of public institutions of various kinds. The axis running north-east from the Secretariat buildings to the railway station and towards the Jama Masjid will form the principal business approach to the present city. At the railway station a *place* will be laid out around which will be grouped the administrative and municipal offices, the banks, the shops and the hotels. On this *place* the post office is placed in symmetrical relation to the railway station.

The processional route will, lead down from the railway station, due south to the point where it is intersected by the main east to west axis. Here round a *place* will be gathered the buildings of the Ethnological Museum, the Library and the Imperial Record Office. To the south-west of the railway station will lie the houses of the local administration and the residences of the European clerks.

Due south of the forum the residence of the Commander-in-Chief will be placed. Round about the Viceregal estate and the forum lies the ground destined for the residences of the Secretaries and other officials of the Government of India. To the south-east of Government House lies the club. To the south of the club a low ridge divides the tract into two portions. That to the west is well adapted for a golf-course, while the eastern side is designed for a race-course, the ridge itself offering unusual facilities for locating stands and seeing the races.

Communications.—The avenues range from 76 feet to 150 feet in width with the exception of the main avenue east of the Secretariat buildings where a parkway width of 1,175 feet has been allowed. The principal avenues in addition to the main avenues are those running at right angles to the main east to west axis

Others form part of a system running from the amphitheatre to the railway station and Commander-in-Chief's residence, and from both the latter to the proposed War Memorial lying on the axis between Indrapat and Government House which is the focal point of the roads and avenues on the packway.

A lake which can be obtained by river treatment is shown on the plan. The lay-out has been made independent of the water effect, but the Committee think that its ultimate creation will enhance enormously the beauties and general amenities of the new capital; and it should and would become an integral portion of the design now submitted.

The report contains lengthy recommendations concerning water-supply, drainage, sewage system, parks and communications. It is imperative, it says:—"that a complete scheme of railway arrangements designed to serve the whole of the capital, both old and new, should be an essential feature of the lay-out of the Imperial City, and this important matter should not be left to be settled when it is too late to deal with it." The main lines of the lay-out as projected by the Committee have been accepted by Government. The expenses of the new central station and the difficulty experienced in meeting the various railway interests concerned will necessitate the postponement of this part of the scheme, and it has been decided that the needs of New Delhi will be met by a diversion of the existing Agra-Delhi Chord Railway to a line drawn eastward of Humayun's Tomb and Purana Killa and the construction of a new through station near the site of the proposed Central station. Another important modification consists in the reservation of the area lying south of the Delhi and Ajmere Gates of the city for the purpose of the extension of Old Delhi.

Nor is it now proposed to give effect to the extensive scheme of river training designed by the Town Planning Committee; and it is probable that little more will be done in this direction than to create a lake immediately at the end of the central vista and alongside the walls of Indrapat.

Temporary Capital.—For the use of the Government of India during the period of the building of the new capital—a period that will have to be extended owing to the conditions created by the war—an area has been selected along the Alipur Road, between the present civil station of Delhi and the Ridge. The early idea that many of the officials should live under canvas had to be given up, and there are now temporary offices and residences. The architecture and method of construction are similar to those adopted in the exhibition buildings at Allahabad in 1910; but the buildings will outlast the transitional period for which they are intended. They will subsequently be an asset of some value.

Chief Commissioner Appointed.—On October 1, 1912, by proclamation, there was constituted an administrative **enclave of Delhi** under a Chief Commissioner, Mr. W. M. Hailey, I.C.S. The Delhi district of the Punjab, from

which this enclave was entirely taken, consisted of three tahsils or subdivisions and the enclave was formed by the central tahsil, that of Delhi, and by such part of the southern tahsil, Ballabgarh, as was comprised within the limits of the police post of Mahrauli. Delhi Province as thus defined had originally an area of 528 square miles to which was added later an area of 45 square miles to the east of the Jumna river and taken from the United Provinces to serve as a grazing ground for the cattle for the city. The total area is, therefore, 573 square miles. On the basis of the Census of 1911, the population of the area originally included in the Province is 3,98,269 and of the new area 14,552, or a total of 4,12,821. The population of the Municipal town of Delhi is 2,29,144.

The Architects' Designs.—At the Royal Academy in 1914 there were exhibited drawings by Sir Edwin Lutyens and Mr. Baker, which though provisional and rather in the nature of what are called Warrant Designs, show how the architectural problems of the new capital are to be solved. Government House and the Secretariat have been planned by them as one block, as it were a Capital, facing towards Indrapat. The **Secretariat** is to be built on the rock of Raisina hill, the top of which has been levelled for the purpose: behind the Secretariat is to be a raised causeway forming the approach to Government House: and Government House itself is to be built on a high basement constructed on an outcrop of rock. The main processional route to Government House is to be along a sloping way (at a gradient of one in 22½) which leads from a semi-circular piazza, the "Great Place" to the level of the Secretariat buildings.

At the summit of this sloping way is the "**Government Court**", a space of about 1,100 feet in length, and 400 feet in breadth flanked to the north and south by the two blocks of Secretariat buildings. These buildings have been designed by Mr. Baker and the aggregate cost will be some Rs. 1,24,00,000. According to the design the eastern end of each block is marked by deep loggias looking out over the Central Vista. In the centre of each block is a dome. In the case of the north block this marks an Entrance Hall: in the south block it surmounts a Conference Hall with a suite of cloak and reception rooms. Each block contains four floors: on the main ground floor are the general offices of the Departments; on the first floor are the offices of members of Council, Secretaries, and other officers; whilst the remaining floors are occupied by clerk rooms and records. An essential feature of the design, and one which sets the character of the whole building, is the provision of loggias and recessed gate ways or exedrae giving views through to the fountain courts situate in the interior of the blocks, and these take the place of the continuous verandahs that are so familiar a feature in Indian buildings. The Architect relies for control of temperature on these loggias and recesses, on which external walls, together with the thick window shutters adopted so widely in Southern Europe, and the wide *chajja* characteristics of Oriental buildings.

Between the north and south Secretariat blocks, is the way into the "Viceroy's Court"—the raised causeway already referred to—leading up to Government House. The Court is about 600 feet in breadth and 1,300 feet in length; it will be treated with grass and water ways and low trees; and should form a dignified approach to the final group of buildings. At a point midway in the causeway, at which will be erected a column presented by the Maharajah of Jaipur, roads lead off to the north and south, forming alternative lines of approach to Government House.

One thus reaches the portico of **Government House**. This portico raised some twenty feet above the level of the Viceroy's Court and thirty-five feet above the surrounding country. The house itself centres round the great Durbar Hall, a domed structure which dominates the scheme of the buildings surrounding it. Grouped round the Durbar Hall are the State Rooms and great stairways from the entrance Courts on the north and south sides. Projecting from this central block are four wings, that on the south west containing the Viceroy's private apartments. In the south west wing, accommodation is provided for the A.D.C.'s to the Viceroys. Guests are accommodated in the north west wing, whilst the north-east wing contains the officers of the Viceroy's Private and Military Secretaries and other members of his establishment. On the western side of the house will be a raised garden, walled and terraced after the manner of the Moghuls, and behind that again, on the level of the surrounding country, a park which will contain the staff houses and quarters. The park will extend to the rocky slopes of the Ridge which close in the vista on the west. The house will, with its attached quarters, garden and park, all of which have been designed by Sir Edwin Lutyens, cost approximately Rs. 95,00,000.

Style of Architecture.—There had been a prolonged "battle of the styles" over Delhi and if these designs gave satisfaction to neither of the extreme and opposed schools of thought, they clearly showed an endeavour to apply, with due regard for Indian sentiment, the spirit and essence of the great traditions of architecture to the solution of structural problems conditioned upon an Indian climate and Indian surroundings and requirements. To use the language of the architects themselves, it has been their aim "to express, within the limit of the medium and of the powers of its users, the ideal and the fact of British rule in India, of which the New Delhi must ever be the monument."

The inspiration of these designs is manifestly Western, as is that of British rule, but they combine with it distinctive Indian features without doing violence to the principles of structural fitness and artistic unity. Much will depend upon the resourcefulness and ability of the Indian artificers themselves whom the Government of India proposes to bring together in Delhi to give expression, by their decorative work, to the best traditions of skilled Indian craftsmanship.

Cost of the Scheme.—It was at first tentatively estimated that the cost of the new capital would be four million sterling and that sum

was given in the original despatch of the Government of India on the subject. This latest revised estimate sanctioned by the Secretary of State is as follows:—

Salaries and Allowances, including Travelling Allowances, Supplies, Services and Contingencies, Rs. 86,00,000.

WORKS EXPENDITURE:—(1a) Government House, Rs. 95,00,000; (1b) Secretariats, Rs. 1,24,00,000; (1c) Other Buildings, Rs. 2,04,66,400; (2) Communications, Rs. 34,50,000; (3) Miscellaneous Public Improvements, Rs. 25,25,000; (4) Electric Light and Power, Rs. 48,22,400; (5) Irrigation, Rs. 31,00,000; (6a) Storm Water Drains, Rs. 27,00,000; (6b) Sewerage, Rs. 17,08,000; (6c) Water Supply, Rs. 21,40,000; (6d) Conservancy, Rs. 5,00,000; (7) Purchase of Tools and Plant, Rs. 45,67,500; (8) Survey Expenses Preparation of Sites, Models, Service Roads, General Services other, Miscellaneous Expenditure, Rs. 56,34,000; (9) Maintenance during Construction, Rs. 35,63,500, (10) Railway Diversion, Rs. 8,00,000.

ACQUISITION OF LAND TAKEN UP, Rs. 35,50,852; other Miscellaneous Expenditure, Rs. 6,000. Deduct anticipated recovery by sale of tools and plant, Rs. 10,00,000. Net Total, Rs. 8,90,33,652. There is further reserve in hand of Rs. 26,70,648. The gross sanctioned total is therefore Rs. 9,17,04,300.

The Project Estimate contains certain items such as land, residences, water supply, electric light and power, and irrigation on which recoveries in the form of rate or taxes will, in addition to meeting current expenditure, partially at any rent cover the interest on the capital outlay whilst there are other items on which some return on account of the sale of leases, general taxes on and indirect receipts may be expected.

Progress of the work.—The construction of New Delhi has made satisfactory progress, having regard to the curtailment of the Budget allotment, in consequence of the war.

With the return of officers and other establishments to their civil work with the more liberal provision of money which will now be possible and with the increasing facilities for obtaining materials of all kinds both in India and from England, the work is now speeding up again. It is hoped that the work will be sufficiently advanced to permit of the government of India being carried on from the New Capital by the end of 1924.

Many of the European and Indian clerks quarters and the menials' quarters have been completed, and bungalows have been provided for the occupation of the works staff. Bungalows for the higher officials, in the neighbourhood of Government House, have been completed, and some were occupied in 1918.

Meanwhile the central point of interest in the plan has been given careful detailed consideration by the Government and the architects. The basements of Government House and the large blocks of Secretariats by which it will be

anked have been completed; substantial progress has been made with the Viceroy's Court, the Government Court between the two blocks of Secretariats, the Great place and with the laying out tree planting and waterways of the Central Vista. An indication of the progress at the Governmental centre on Raisina Hill was seen in the Royal Academy, where the statues of their Majesties in Coronation robes, which are to be placed in front of Government House, have been exhibited. That of the King, by Mr. Mackenna, is the gift of the Maharaja Scindia of Gwalior, and that of the Queen, by Sir George Frampton, is the gift of the Maharaja of Bikanir. The keen interest of the ruling princes in the transfer of the capital, which is very welcome to them, is further shown in the gift by the Maharaja of Jaipur of funds for a Column, designed by Sir Edwin Lutyens which is to be located midway in the Viceroy's Court. This Column is surmounted by the Star of India, and will be visible from many parts of the New City.

Two Cathedral Schemes.—In October 1913 a letter was published in *The Times* from the Bishop of Calcutta on the provision of a Cathedral at Delhi. He appealed for £50,000 in addition to any grant given by the Government, and quoted in his letter the following statement of approval by the King-Emperor: "I heartily approve of the project to build a Cathedral in the new city of Delhi. I trust that the appeal for the necessary funds may meet with a generous response, so that in due time the capital of India may possess a Cathedral which in design and character will testify to the life and energy of the Anglican Church and be worthy of its architectural surroundings both of days gone by and of those to come." His Majesty subscribed £100 and the Queen £50 to the fund. The Indian Church Aid Association have received several contributions towards the building fund for the proposed Cathedral Church, in response to the appeal of the Bishop of Calcutta. Cheques may be sent to the Secretary, Indian Church Aid Association, Church House, Westminster, S. W. and crossed Lloyds Bank, St. James's Street, S. W.

A Roman Catholic Cathedral is also projected and Father Paul Hughes, O.M.C., has been touring India collecting money for the Cathedral Fund.

Suggested War Memorial.—Suggestions have been made for completing the central avenue, sited upon Indrapat, by a stately colonnade, entered by three large gateways, to commemorate the Indian heroes of the war. The separate bays would be utilized for distinct memorials, regimental or communal, so that Hindu and Mahomedan, Sikh and Gurkha, Jat and Maharratta would have their respective niches.

Legislative Council Chamber.—In connection with the Indian Reform Scheme, it has become necessary to provide a Legislative Council Chamber Capable of accommodating the enlarged Council. This building will most probably be located on one of the triangular

sites a little to the north east of the northern block of the Secretariats. In the same building will probably be also provided a Chamber in which the Ruling Princes and Chiefs will hold their Annual Conferences.

Residencies for Ruling Princes and Chiefs.—Sites have already been allotted on which thirty three of the Ruling Princes and Chiefs propose to erect residences for occupation when visiting the New Capital. The States which up to the present hour signified their desire to build are Hyderabad, Baroda, Mysore, Bhopal, Gwalior, Kashmir, Kalat, Travancore, Bahawalpur, Bharatpur, Bikaner, Bundi, Kotah, Cutch, Jodhpur, Patiala, Tonk, Alwar, Datia, Dhar, Dholpur, Jaisalmer, Kishangarh, Orchha, Partabgarh, Sirohi, Faridkhot, Jind, Kapurthala, Nabha, Sailana, Malerkotla and Narsingarh.

Ethnological Museum.—A temporary building has been erected in which Sir Aurlve Stein will house some of his Central Asian Antiquities. Work on certain frescoes will probably start shortly and the collection will ultimately be placed in the proposed Museum.

The Agra-Delhi Railway Diversion.—As has been already stated, this railway which at present runs across the site of the new city, is to be diverted to a new alignment running East of Humayun's Tomb and Indrapat. It is expected that this work will start very shortly. Amongst other matters which are now receiving attention are the designs for the residences of the Commander in Chief and the Hon. ble members, the afforestation of the Ridge to the west of the new city, the designs for the Imperial Record Office, and the naming of the roads.

Sanitary Improvements.—While the work on the new city has been going forward various improvements in the existing Delhi have been carried out and the sanitary conditions in particular have been much improved. The fly nuisance which was extremely bad in Delhi has been much reduced, and other schemes have been formulated as the result of a sanitary survey which embraced the whole of the city. The most tangible results of these efforts is seen in the consistent fall in the death-rate, and the acknowledged reduction in the amount of sickness in Delhi.

Higher College for Chiefs.—It was proposed during 1914 that a higher college for Chiefs should be established at Delhi and in this connexion a conference of Chiefs and Political Officers was held at Delhi, in March, at which the Viceroy presided. It was subsequently announced that subscriptions offered towards the college amounted to about ten and a half lakhs, various recurring sums were promised, and the Government of India also promised to recommend the Secretary of State a grant of Rs. 50,000 a year. Thus the whole capital would come to 12½ lakhs. The proposal is still under consideration.

Indian Official Reports.

(MOSTLY ANNUAL.)

General.—

Statistical Abstract relating to British India (Parliamentary Paper).

RED CROSS WORK.

The Joint War Committee of the Order of St. John of Jerusalem and the British Red Cross Society, Indian Branch, came into being on 2nd August 1916 and has been responsible for the provision of almost the whole of the supplies of comforts for the sick and wounded ever since. Up to the end of 1917 its own resources had to be supplemented by grants from the Home Committee but the generous response to the "OUR DAY" appeal made by all classes in India secured its financial position and for the past year it has not only been self-supporting but can regard the future without anxiety.

Their Excellencies the Viceroy, Lady Chelmsford and the Commander-in-Chief are the President, Lady President and Vice-President respectively of the Committee, the affairs of which are managed by a **General Committee** composed as follows:—

*The Hon'ble Sir Claude Hill, K.C.S.I., C.I.E., I.C.S. (Chairman).

Colonel Sir Lawless Hepper, Kt., R.E. (Vice-Chairman, Bombay).

The Hon'ble Mr. W. E. Crum, O.B.E. (Vice-Chairman, Calcutta).

*The Hon'ble Mr. W. M. Hailey, C.S.I., C.I.E. (Vice-Chairman, Delhi).

*Lady Bingley.

*Lady Reed.

*Miss Darbyshire.

*Lieut.-General T. J. O'Donnell, C.B., D.S.O.

The Hon'ble Sir William Vincent, Kt.

The Hon'ble Sir Robert Gillan, K.C.S.I.

*The Hon'ble Major-General W. R. Edwards, C.B., C.M.G., I.M.S.

The Hon'ble Sir John Wood, K.C.I.E., C.S.I., C.I.E.

The Hon'ble Sir Hamilton Grant, K.C.I.E., C.S.I.

*The Hon'ble Mr. H. Sharp, C.S.I., C.I.E.

J. L. Maffey, Esq., C.I.E., I.C.S.

*Lieut.-Colonel H. Austen Smith, C.I.E., I.M.S.

*H. R. Phelps, Esq.

*G. Rainy, Esq., C.I.E., I.C.S.

Lieut.-Col. P. S. M. Burlton, I.A.

The Revd. James Black, O.B.E., M.A.

*Lieut.-Col. H. Ross, O.B.E., I.M.S.

W. J. Litster, Esq., O.B.E. (Honorary Treasurer).

Major A. L. Davies.

E. J. Buck, Esq., C.B.E.

The Hon'ble Mr. Purshotamdas Thakurdas.

The Hon'ble Raja Sir Rampal Singh, K.C.I.E.

The Hon'ble Rai Bahadur Chaudri Lal Chand, O.B.E.

Major J. C. Coldstream, I.A. (General Secretary).

Those whose names are marked* form the Working Committee which is assisted by a Finance Sub-Committee and a Medical Sub-Committee.

In the beginning of 1918 a scheme of re-organization of Red Cross work throughout India and Burma was adopted as the result of which each Province became practically autonomous as regards its own Red Cross work. The wants of Military hospitals situated within the

boundaries of a Province became its own special care and were met by a Provincial Committee which administered Provincial Funds and organized Work Parties and other supplies. Provinces also were most generous in sending supplies of clothing and other comforts to the Bombay Depot. The General Committee thus relieved of the supervision of local work was enabled to concentrate its energies on co-ordinating Red Cross work throughout India, to take the measures necessary to avoid over-lapping, to exercise general control over the operations of the Bombay Depot and to arrange for supplies required by Commissions overseas. The result of the re-organization proved most satisfactory.

Proposed new organisation.—In 1919 proposals were circulated by the President of the Joint War Committee which may be briefly summarised as follows:—

(a) to constitute an Indian Red Cross Society on a formal basis;

(b) to organise ourselves efficiently by the formation of affiliated provincial branches;

(c) to co-ordinate on a permanent footing our relations with St. John Ambulance Association and the Bridge overseas, and

(d) to determine the scope and limitations of the activities upon which we should embark.

In the first place, said Sir Claude Hill in a note on the subject, the necessary steps must be taken for the constitution of an Indian Red-Cross Society with branches in every province, and for legalising, if necessary, the vesting in that Society of the administration of the capital sums at present to the credit of the Joint War Committee and of such other sums as may hereafter be collected and credited to it. Action is being taken by my Committee to obtain legal advice as to whether this can best be effected by legislation establishing the Indian Red Cross Society and enabling it to administer its funds on the same broad basis as is provided for in the new Charter of the British Red Cross Society, or whether the objects can be compassed by other means. But my Committee feel strongly that whatever may be found to be necessary should be done with as little delay as possible.

The war brought into being many Committees and provincial, district and women's work parties were established all over the country. For the first time there has arisen a realisation of the need for co-operative effort for the relief of distress and suffering, an effort which has been shared by all classes and creeds in the community. It is one of the aims of the present proposals, by organising branches for Red Cross work throughout India to take advantage of the machinery which the war has originated, and to divert its energies into the much-needed work of hospital improvement, both civil and military. If it is once realised how poor and destitute are the majority of patients, whether Indian, European or Eurasian, admitted to our civil hospitals, the Joint War Committee feel confident that the attempt to reconstitute the relief organisations, which came into being with the war, for the purposes we now have in view will meet with the readiest and most catholic response.

THE VICTORIA CROSS.

The announcement, made at the Delhi Durbar in 1911, that in future Indians would be eligible for the Victoria Cross gave satisfaction which was increased during the War by the award of that decoration to the following:—

Subadar (then Sepoy) Khudadad Khan, 129th Baluchis—On 31st October 1914, at Hollebeke, Belgium, the British Officer in charge of the detachment having been wounded, and the other gun put out of action by a shell, Sepoy Khudadad, though himself wounded remained working his gun until all the other five men of the gun detachment had been killed.

Naick Darwan Sing Negi, 1-39th Garhwal Rifles.—For great gallantry on the night of the 23rd-24th November 1914 near Festubert, France, when the Regiment was engaged in re-taking and clearing the enemy out of our trenches, and, although wounded in two places in the head, and also in the arm, being one of the first to push round each successive traverse, in the face of severe fire from bombs and rifles at the closest range.

Subadar (then Jamadar) Mir Dast, 55th Coke's Rifles.—For most conspicuous bravery and great ability at Ypres on 26th April 1915, when he led his platoon with great gallantry during the attack, and afterwards collected various parties of the Regiment (when no British Officers were left) and kept them under his command until the retirement was ordered. Jamadar Mir Dast subsequently on this day displayed remarkable courage in helping to carry eight British and Indian Officers into safety, whilst exposed to very heavy fire.

Rifleman Kulbir Thapa, 2-3rd Gurkha Rifles.—For most conspicuous bravery during operations against the German trenches south of Mauquisart. When himself wounded, on the 25th September 1915, he found a badly wounded soldier of the 2nd Leicestershire Regiment behind the first line German trench, and though urged by the British soldier to save himself, he remained with him all day and night. In the early morning of the 26th September, in misty weather, he brought him out through the German wire, and, leaving him in a place of comparative safety returned and brought in two wounded Gurkhas one after the other. He then went back in broad daylight for the British soldier and brought him in also, carrying him most of the way and being at most points under the enemy's fire.

Havildar (then Lance-Naick), Lala, 41st Dogras.—Finding a British Officer of another regiment lying close to the enemy he dragged him into a temporary shelter which he himself had made, and in which he had already bandaged four wounded men. After bandaging his wounds he heard calls from the Adjutant of his own Regiment who was lying in the open severely wounded. The enemy were not more than one hundred yards distant, and it seemed certain death to go out in that direction, but Lance-Naik Lala insisted on going out to his Adjutant, and offered to crawl back with him on his back at once. When this was not permitted, he stripped off his own clothing to keep the wounded officer warmer and stayed with him till just before dark, when he returned to the shelter. After dark he carried

the first wounded officer back to the main trenches, and then, returning with a stretcher carried back his Adjutant. He set a magnificent example of courage and devotion to his officers.

Sepoy Chatta Singh, 9th Bhopal Infantry.—For most conspicuous bravery and devotion to duty in leaving cover to assist his Commanding Officer who was lying wounded and helpless in the open. Sepoy Chatta Singh bound up the officer's wound and then dug cover for him with his entrenching tool, being exposed all the time to very heavy rifle fire. For five hours until nightfall he remained beside the wounded officer shielding him with his own body on the exposed side. He then, under cover of darkness, went back for assistance, and brought the officer into safety.

Naick Shahamad Khan, 89th Punjabis.—For most conspicuous bravery. He was in charge of a machine-gun section in an exposed position in front of and covering a gap in our new line within 150 yards of the enemy's entrenched position. He beat off three counter-attacks, and worked his gun single-handed after all his men, except two belt-fillers, had become casualties. For three hours he held the gap under very heavy fire while it was being made secure. When his gun was knocked out by hostile fire he and his two belt-fillers held their ground with rifles till ordered to withdraw. With three men sent to assist him he then brought back his gun, ammunition, and one severely wounded man unable to walk. Finally, he himself returned and removed all remaining arms and equipment except two shovels. But for his great gallantry and determination our line must have been penetrated by the enemy.

Lance-Dafedar Govind Singh, 28th Cavalry.—For most conspicuous bravery and devotion to duty in thrice volunteering to carry messages between the regiment and brigade headquarters a distance of 1½ miles over open ground which was under the observation and heavy fire of the enemy. He succeeded each time in delivering his message although on each occasion his horse was shot, and he was compelled to finish the journey on foot.

Rifleman Karan Bahadur Rana, 23rd Gurkha Rifles.—For conspicuous bravery and resource in action under adverse conditions, and utter contempt of danger during an attack. He with a few other men succeeded, under intense fire, in creeping forward with a Lewis gun in order to engage an enemy machine gun which had caused severe casualties to officers and other ranks who had attempted to put it out of action. No. 1 of the Lewis gun party opened fire and was shot immediately. Without a moment's hesitation Karan Bahadur pushed the dead man off the gun, and in spite of bombs thrown at him and heavy fire from both flanks, he opened fire and knocked out the enemy machine gun crew. Then switching his fire on the enemy bombers and riflemen in front of him, he silenced their fire. He kept his gun in action, and showed the greatest coolness in removing defects which had twice prevented the gun from firing. He did magnificent work during the remainder of the day, and when a withdrawal was ordered, assisted with covering fire until the enemy was close to him. He displayed throughout a very high standard of valour and devotion to duty,

Ressaidar Badlu Singh, 14th Lancers, attached 29th Lancers.—For most conspicuous bravery and self-sacrifice on the morning of the 23rd September 1918, when his squadron charged a strong enemy position on the west bank of the River Jordan, between the river and Kh. es Samariveh Village. On nearing the position Ressaider Badlu Singh realised that the squadron was suffering casualties from a small hill on the left front occupied by machine guns and 200 infantry. Without the slightest hesitation he collected six other ranks and with the greatest dash and an entire disregard of danger charged and captured the position, thereby saving very heavy casualties to the squadron. He was mortally wounded

on the very top of the hill when capturing one of the machine guns single-handed, but all the machine guns and infantry had surrendered to him before he died. His valour and initiative were of the highest order.

Rifleman Gobar Sing Negi, 2nd Battalion 39th Garhwal Rifles.—For most conspicuous bravery on 10th March 1915 at Neuve Chapelle. During an attack on the German position he was one of a bayonet party with bombs who entered their main trench, and was the first man to go round each traverse, driving back the enemy until they were eventually forced to surrender. He was killed during this engagement.

PASSPORT REGULATIONS.

The following regulations concerning passports are the chief :—

1. Applications for Indian Passports must be made in the prescribed form, and submitted either direct or through the local authority—(a) in the case of a resident in British India, to the Local Government or Local Administration concerned; (b) in the case of a resident in a Native State, to the Agent to the Governor-General or Political Resident concerned.

2. The charge for an Indian Passport is Re. 1. 3. Indian Passports are granted to—(a) Natural-born British subjects; (b) wives and widows of such persons; (c) Persons naturalized in the United Kingdom, in the British Colonies or in India; and (d) Subjects of Native States in India. A married woman is deemed to be a subject of the State of which her husband is for the time being a subject.

4. Passports are granted upon the production of a declaration by the applicant (in the case of a child under 15 requiring a separate passport by the child's parent or guardian) in the prescribed form of application verified by a declaration made by a *Political Officer, Magistrate, Justice of the Peace, Police Officer not below the rank of Superintendent or Notary Public*, resident in India. If possible the declaration should be signed by an officer of the district in which the applicant is resident. Otherwise the issue of a Passport may be delayed while enquiries are being made from the local authorities.

5. If the applicant for a Passport be a Naturalized British subject, the certificate of naturalization must be forwarded with the form of application to the Officer empowered to grant the Passport. It will be returned with the Passport to the applicant through the person who may

have verified the declaration. Naturalized British subjects will be described as such, in their Passports, which will be issued subject to the necessary qualifications.

6. Small duplicate unmounted photographs of the applicant (and wife, if to be included must be forwarded with the application for a Passport, one of which must be certified on the back by the person verifying the declaration made in the application form.

7. Indian Passports are not available beyond two years from the date of issue. They may be renewed by any competent British Authority for four further periods of two years each after which fresh Passports must be obtained. The fee for each renewal is Re. 1.

8. Passports cannot be issued or renewed on behalf of persons already abroad: such persons should be told to apply for Passports to the London Foreign Office or nearest British Mission or Consulate. Passports must not be sent out of India by post.

9. In the case of an applicant for a Passport being unable to write English a transcription in English should be placed below the applicant's vernacular signature in the form of application. In the case of an illiterate person, a thumb impression should be substituted for a signature on the form of application, which should be certified by the person verifying the declaration.

Parda-nashin or gosha women desirous of travelling from India to Malaya, the Straits Settlements, the East Africa Protectorate, Uganda, Zanzibar, Mauritius, the Nyassaland Protectorate and the Union of South Africa are exempted from the necessity of attaching their photographs to their applications for passports or of appearing in person before the passport issuing authorities.

Racing.

Calcutta.

[Season 1918-19].

Governor's Cup. Distance 1 $\frac{3}{4}$ miles.—

- Mr. Galstaun's St. Quin. (8st. 5lbs.), Barden. 1
 Mr. Ainsworth's Giacomo (7st. 10lbs.), Rose. 2
 Mr. Guthrie's Calder Vale (8st. 7lbs.),
 Macabe 3
 Mr. Goculdass' Matchlock (7st. 12lbs.), Flynn. 4

Also Ran :—One (9st. 9lbs.), Kiltoi (9st.), Thunder (8st. 11lbs.), King's Fare (8st. 3lbs.), Red Quill (7st. 3lbs.), Bright Bird (6st. 12lbs.), Reigning Star (6st. 10lbs.), and Little Star (6st. 7lbs., carried 7st. 5lbs.).

Won by three and a half lengths : 2 $\frac{1}{4}$ lengths; and a head. Time—3mins. 2 secs.

Metropolitan Plate. Distance 6 furlongs.—

- Mr. Walsh's Necessity (7st. 7lbs.), Northmore 1
 Mr. Goculdass' Verge (9st. 12lbs.), Huxley. 2
 Mr. Ramshaw's Poignant (8st. 5lbs.), Harrison 3
 Captain Bouvet's Louviers d'Or (7st. 11lbs.), J. Flynn 4

Also Ran :—Bydand (8st. 4lbs.), Symrex (8st. 3lbs.), Pastime (8st.), and Tootsie (7st. 13lbs.).

Won by one and $\frac{3}{4}$ lengths : $\frac{3}{4}$ and one length. Time—1min. 14 1-5 secs.

Prince of Wales Plate. Distance 1 mile.—

- Mr. Donetil's King's Fare (8st.), Harrison. 1
 Mrs. Ainsworth's Little Nan (8st. 2lbs.), Rose 2
 Mr. Guthrie's Sampier (8st.), McCall .. 3
 Captain Bouvet's Louviers d'Or (8st. 3lbs.), Flynn 4

Also Ran :—Ballaghtobin (8st. 7lbs.), Calder Vale (8st. 6lbs.), Eagle's Nest (7st. 4lbs.), Camberley (7st. 4lbs.), and Reigning Star (6st. 7lbs.).

Won by three-fourth length, one and a quarter length; and a length. Time—1 min. 29 secs.

Carmichael Cup. Distance 1 $\frac{1}{4}$ mile—

- Mr. Galstaun's St. Quin (7st. 7lbs.), Rose. 1
 Mr. Goculdass' Baronvale (7st. 7lbs.), S. J. Meekings 2
 Captain Bouvet's Louviers d'Or (8st. 4lbs.), Pullin 3

Also Ran :—Kiltoi (9st. 10lbs.), Double Scotch (9st.), Ballaghtobin (9st.), Oros (9st.), Redspear (8st. 4lbs.), King's Fare (8st. 4lbs.), Necessity (7st. 7lbs.).

Won by three lengths; one and a half length; and one and a half length. Time—2 mins. 6 4-5 secs.

Macpherson Cup. Distance St. Leger Course—

- Mr. Guthrie's Thunder (8st. 8lbs.), Pullin. 1
 Mr. Guthrie's Calder Vale (8st. 7lbs.), McCall. 2
 Mr. J. Ainsworth's Giacomo (8st. 1lb.), Rose. 3
 Mr. Goculdass' Matchlock (7st. 11lbs.), Flynn 4

Also Ran :—One (9st. 8 lbs.) St. Quin (9st. 4 lbs.), Kiltoi (8st 12l. s.), Double Scotch (18st 6lbs) and Bright Bird (8st: 7 lbs, carried 7st).

Won by a short head, a neck and a head. Time.—3 mins. 14 1-5 secs.

Indian Grand National. Distance 3 miles—

- Mr. Conningham's Black Mailer (12st. 7lbs.), Williamson 1
 Mr. Goculdass' Yuan (10st. 13lbs.), Scott. 2
 Mr. Allan's Brandichoc (10st. 10lbs.), White. 3
 Messrs. Donetil and Page's Irishfield (11st. 2lbs.), Barker 4

Also Ran :—Lesto (11st. 6lbs.), Marie Antoinette (10st. 9lbs.) (fell), Canberra (10st. 8lbs.) (fell), Footsteps Fearless (9st. 10lbs.), Sea Lad (9st.), and Tarfoot (8st.).

Won by 1 $\frac{1}{4}$ lengths, 12 lengths and 4 lengths. Time—6 mins. 2 2-5 secs.

Bombay.

Byculla Club Plate. Distance 1 $\frac{1}{2}$ miles—

- Mr. E. L. F. DeSoysa's Mordennis (8st. 7lbs., carried 8st. 8lbs.), Trenoweth. 1
 Mr. M. Goculdass' William the Beau (7st. 8lbs.), Purtoosingh 2
 Mrs. G. E. D. Langley's Caryanda (7st. 9lbs.), Meekings 3
 Mr. Guthrie's Sampier (7st. 13lbs., carried 8st.), Bowley 4

Also Ran :—Thunder (9st. 4lbs.), Calder Vale (9st. 21lbs.), First Flier (9st.), Ardreck (8st. 10lbs.), Giacomo (8st. 8lbs.), Fiz Yama (8st. 7lbs.), Matchlock (8st. 3lbs.), Baronvale (7st. 7lbs.), Brendan (8st. 2lbs.), Ballaghtobin (8st.), and Kinsale (7st. 7lbs.).

Won by a neck, a short head dividing the second, third and fourth. Time—2 mins. 34 secs.

Grand Western Handicap. Distance 1 mile—

- Mr. M. Goculdass' William the Beau (7st. 5lbs.), Lynch 1
 Messrs. J. H. Skelton and W. P. Pechey's Llangeinor (9st. 4lbs.), Templeman. 2
 Mrs. J. L. Ainsworth Little Nan (8st. 10lbs.), Rose 3
 Mr. R. R. S.'s Kinsale (7st. 9lbs.), Collis. 4

Also Ran :—Calder Vale (9st. 7lbs.), Sampier (8st. 3lbs.), Anthracite (7st. 6lbs.), First Flier (9st. 2lbs.), Oros (8st. 13lbs.), Brendan (8st. 13lbs.), Ardreck (8st. 7lbs.), Ballaghtobin (8st. 7lbs.), Barnovale (7st. 13lbs.), Cairngillan (7st. 8lbs.), and Necessity (7st. 7lbs.).

Won by a short neck, three-quarter length, half a length. Time.—1 min. 39 secs.

Mansfield Plate. Distance 6 furlongs, 41 yards—

Mr. M. Goculdass' Verge (9st. 11lbs.), W. Huxley	1
Mr. R. R. S.'s Quarryman (9st. 12lbs.), F. Templeman	2
Mr. M. Goculdass' Forfeit Lass (7st. 5lbs.), Purtoosingh	3
Mr. Guthrie's Anthracite (6st. 11lbs.), Northmore	4

Also Ran :—Llangeinor (8st. 13lbs.), Poignant (8st. 5lbs.), Black Walnut (7st. 10lbs.), Pastime (7st. 6lbs., carried 7st. 8lbs.), and Symrex (7st. 4lbs.).

Won by three-quarters of a length; one and a quarter lengths; a neck. Time—1 min. 14 3-5 secs.

Flying Plate. Distance 5 furlongs (straight)—

Mr. K. Shinde's Black Walnut (7st. 7lbs.), Lynch	1
Mr. R. R. S.'s Patrick (7st. 10lbs.), Collis	2
Mr. M. Goculdass' Tagamor (7st. 10lbs.), Northmore	3
Mr. M. Goculdass' Verge (9st. 12lbs.), Huxley	4

Also Ran :—Forward III (8st. 3lbs.), Forfeit Lass (7st. 7lbs.), Poignant (8st. 10lbs.), and Toostie (7st.).

Won by a neck, head divided second, third and fourth. Time.—59 secs.

Willingdon Plate. Distance 1½ miles—

Mr. R. H. Gahagan's Ardreck (8st. 4lbs.), Lynch	1
Mr. J. C. Galstaun's Oros (8st. 11lbs.), Ruiz	2
Mrs. J. L. Ainsworth's Little Nan (8st. 8lbs.), Rose	3
Mr. M. Goculdass' William the Beau (7st. 9lbs.), Purtoosingh	4

Also Ran :—Llangeinor (9st. 6lbs.), Dersingham (9st.), Brendan (8st. 7lbs.), Mordennis (8st. 7lbs.), Sampier (8st. 11bs.), Baronvale (7st. 9lbs.), and Kinsale (7st. 6lbs.).

Won by a head, a neck, a short head. Time—2 mins. 7 3-5 secs.

Colaba Plate. Distance 1 mile—

Mr. R. R. S.'s Waynflete (9st. 3lbs.), F. Templeman	1
Mr. E. L. F. DeSoysa's County Cricket (8st. 8lbs.), Trenoweth	2
Mr. Kelso's Miss Rolleston (7st. 8lbs.), Collis	3
Mr. Pine's Penny Pie (9st. 5lbs.), Harrison	4

Also Ran :—Gunning (9st. 12lbs.), Mazboot (9st. 6lbs.), Redsphear (9st. 3lbs.), Eagle's Nest (8st. 10lbs.), Enchantment (7st. 7lbs.), Red Quill (8st. 2lbs.), Little Trout (8st.), Birthday Clothes (8st.), Royal Band (8st.), Royal Ambition (7st. 13lbs., carried 8st. 11lb.), Country Lad (7st. 11lbs.), Bright Bird (7st. 4lbs.), and Athlete (7st. 2lbs., carried 7st. 3lbs.).

Won by one length; the same; three-quarter length. Time—1 min. 40 secs.

Bombay City Plate. Distance 1¼ miles—

Mr. Guthrie's Calder Vale (8st. 5lbs.), Barnett	1
Messrs. R. D. Sethna and Frank's Brendan (7st. 10lbs.), Harrison	2
Mr. R. H. Gahagan's Ardreck (7st. 10lbs.), Lynch	3
Mr. Guthrie's Sampier (7st. 10lbs.), Buckley	4

Also Ran :—Thunder (8st. 10lbs.), Bachelor's Wedding (8st. 10lbs.), Oros (7st. 10lbs.), Eagle's Nest (8st. 5 lbs.), and Cairngilloan (7st. 10lbs.).

Won by a neck; half a length; one length. Time—2 mins. 6 3-5 secs.

Melbourne Plate. Distance 7 furlongs, 65 yards—

Mr. J. C. Galstaun's Oros (8st. 5lbs.), carried 8st. 6lbs.), Ruiz	1
Messrs. J. H. Skelton and W. P. Pechey's Llangeinor (8st. 13lbs.), Templeman	2
Mr. Guthrie's Anthracite (7st. 6lbs.), Japheth	3
Mr. M. Goculdass' William the Beau (7st. 7lbs.), Purtoosingh	4

Also Ran :—Dersingham (9st. 11lb.), Triple Alliance (9st.), Ardreck (8st. 9lbs.), Sampier (8st. 6lbs.), Tootsie (7st. 4lbs.), Tagamor (8st. 3lbs.), Kinsale (7st. 11lbs.), and Necessity (7st. 10lbs.).

Won by a neck, one and a half lengths; one length. Time—1 min. 30secs.

Malabar Hill Plate. Distance 6 furlongs, 41 yards—

Mr. R. R. S.'s Quarryman (9st. 3lbs.), Templeman	1
Mr. M. Goculdass' Verge (9st. 3lbs.), Huxley	2
Mr. T. Tejpal's Glass Rock (7st. 10lbs.), Meekings	3
Mr. R. R. S.'s Patrick (7st. 10lbs.), Collis	4

Won by a short head; three lengths; three-quarters of a length. Time—1 min. 15 2-5 secs.

Innovation Plate. Distance 6 furlongs, 41 yards—

Mr. R. R. S.'s Quarryman (9st.), Templeman	1
Mr. M. Goculdass' Forfeit Lass (7st. 2lbs.), Purtoosingh	2
Mr. M. Goculdass' Tagamor (7st. 8lbs.), J. R. Flynn	3
Mr. M. Goculdass' Verge (9st. 13lbs.), Huxley	4

Also Ran :—Llangeinor (8st. 12lbs.), Poignant (8st. 11lbs.), Necessity (7st. 12lbs.), Black Walnut (7st. 10lbs.), Symrex (7st. 9lbs.), Tootsie (7st. 2lbs.), and Anthracite (7st. 2lbs.).

Won comfortably by one length; half a length; one length. Time—1 min. 15 secs.

Turf Club Cup. Distance 1½ miles—

- Mr. R. H. Gahagan's Collingwood (9st. 12lbs.), Bowley 1
- Mr. R. R. S.'s Kayid (9st. 10lbs.), F. Templeman 2
- Mr. R. R. S.'s Dartmoor (9st. 3lbs.), Collis .. 3
- General Nawabzada Obaidulla Khan's Fury (6st. 11lbs., carried 7st. 5lbs.), Harrison 4

Also Ran :—Durban (9st.), Gazal (7st. 6lbs.), Mandil (8st. 8lbs.), Hakum (late Merrily) (6st. 7lbs.), Earl (8st. 8lbs.), Nawabzada (7st. 7lbs.), Quantity (7st. 5lbs.), Mooltan (7st. 5lbs., carried 7st. 7lbs.), Amir Aswad (7st. 4lbs.), Nizam-ul-Mulk (7st. 3lbs.), Royal Court (6st. 12lbs.), Rose Hill (6st. 8lbs., carried 6st. 11lbs.), and Caulkley (late Conserption) (6st. 7lbs., carried 7st. 3lbs.).

Won by half a length; one length between second, third and fourth. Time—2 mins. 51 2-5 secs.

Bombay Derby. Distance 1½ miles—

- Mr. Ali bin Talib's Hakum (late Merrily) (6st. 4lbs., carried 6st. 5lbs.), Japheth .. 1
- Mr. R. H. Gahagan's Collingwood (9st. 11lbs.), Bowley 2
- General Nawabzada Obaidulla Khan's Earl (8st. 8lbs.), Ruiz 3
- Mr. Ali bin Talib's Mandil (8st. 5lbs., carried 8st. 6lbs.), Huxley 4

Also Ran :—Dartmoor (9st. 7lbs.), Palermo (7st. 8lbs.), Look Out (6st. 4lbs., carried 6st. 11lbs.), Longboat (8st. 5lbs.), Tasmania (7st. 8lbs.), and All Joy (7st. 4lbs.).

Won by a head; a short head; four lengths. Time.—2 mins. 50 secs.

Dealers' Plate. Distance 1 mile—

- General Nawabzada Obaidulla Khan's Earl (8st. 2lbs.), Harrison 1
- Mr. R. H. Gahagan's Collingwood (9st. 8lbs.), Bowley 2
- Mr. Heat's Portcullis (6st. 11lbs.), Purtoosingh 3
- Messrs. Dara Cowasjee and Arnold's Red Cross (9st. 4lbs.), Hardy 4

Also Ran :—White Silk (9st. 8lbs.), Jawad (6st. 11lbs.), Palermo (7st. 12lbs.), Dartmoor (9st. 4lbs.), Nawabzada (8st. 10lbs.), Longboat (8st. 3lbs.), Look Out (6st. 11lbs., carried 7st.), Good Luck (7st. 13lbs.), Investor (7st. 12lbs.), and Ayr Laddie (6st. 7lbs.).

Won by one and a quarter lengths; a short head; one and a quarter lengths. Time—1 min. 50 4-5 secs.

Gough Memorial Plate. Distance 7 furlongs, 65 yards—

- Messrs. Dara Cowasjee and Arnold's Red Cross (9st. 13lbs.), Trenoweth 1

21st Lancers " A " Nil.
Lucknow Tournament—
12th Cavalry 5 goals
26th K. G. O. Lancers 3 goals

INDIAN POLO ASSOCIATION.

Up to 1891 each annual polo tournament held in India framed its own rules for the conduct of the tournament and its own polo laws; the only similarity about the various codes of the latter being their objective, namely, the safety of the game and its welfare. Most of these codes were badly worded, badly arranged, vague and unsatisfactory, an exception was the code in force at Bombay, which at that time had a flourishing and influential tournament. The Inter-Regimental Tournament adopted the Bombay code in the year 1888. The idea of forming a governing body to fulfil functions in relation to polo similar to those of the M.C.C. towards cricket was circulated at the Inter-Regimental Tournament at Amhalla in 1891. As a result of this the Indian Polo Association came into being in 1892, with its constitution, its polo laws, its rules for the regulation of tournaments, and for the height and measurement of ponies, drafted and moulded into a form very similar to that of to-day. Certain changes have been made in the rules

and laws adopted by the Association at the time of its formation. In point of number these changes are comparatively few; but some of them are important and far reaching, and were introduced by reason of the necessity of keeping abreast of the development of the game following on its increasing popularity, not in India only, but also in other parts of the world. The Association thus became the recognised supreme authority in India over polo. It is the only authority, so far as India is concerned, which can amend, alter, vary, modify, or annul the existing laws of the game, or frame new laws; and it is the final tribunal of appeal in all matters in difference or dispute concerning polo.

The Army Polo Committee for 1918-19 consists of:—President: Major-General Leader, Inspector of Cavalry. Members: Major-General R. St. C. Lecky, late R. H.A.; Brig.-General R. M. Poore, late 7th Hussars; Brig.-General F. G. H. Davies, late Corps of Guides; and Brig.-General S. B. Grimston, late 18th Lancers. Honorary Secretary: Major R. W. W. Grimshaw, Poona Horse.

INTEREST TABLE.

Chronicle of the year 1919.

JANUARY.

1st.—There was published a message from H. M. the Queen-Empress to the women of India expressing warm appreciation of their fortitude and patience during the war, deeply sympathising with the sacrifices and sorrows it caused them and showing Her Majesty's intense sympathy with their well-being and advancement.—Obituary: Rt. Rev. G. A. Lefroy, D.D., Lord Bishop of Calcutta, Metropolitan of India.

2nd.—First contingent of the returning remnants of the Kut Garrison reached Bombay.

9th.—Indian Railway Administration report showed net working profit of £9,992,134 from state railways during 1917-18.—Bombay Cotton Mill Strike attained serious dimensions, number of strikers being estimated at one lakh and fundamental cause of strike being economical.

10th.—Appointment of Sir S. P. Sinha to be Under-Secretary of State for India and his elevation to the British peerage announced.

11th.—Second Conference organized by Indian Mathematical Society held in Bombay, the president Prof. A. C. L. Wilkinson, dealing in his address specially with the teaching of mathematics in secondary schools and with the policy of complete separation in teaching arithmetic, algebra and geometry.

13th.—Indian Science Congress opened in Bombay.

18th.—Death of H. M. the Emperor's youngest son, Prince John.

20th.—Council of Princes in Delhi, opened by H. E. the Viceroy.

22nd.—Bombay mill strike, millowners making large concessions, a measure they were led to take partly by grave epidemic of cholera arising from insanitary condition of mill labourers' quarter of the city, owing to population of those parts remaining about their homes instead of going to their mills. Cholera deaths to-day 311.

26th.—Partial settlement of Bombay mill strike ended.—Hon. Mr. Surendranath Banerjee unveiled portrait of late Dr. Dadabhoi Naoroji in Bombay University Convocation Hall.

31st.—Government of India announced that owing to high prices of cotton cloth necessity has arisen for manufacture of standard cloth and that Cotton Cloth Act of 1918, providing for its compulsory manufacture on Government order by Indian cotton mills, would immediately be put into operation, output of five per cent. of looms being taken up monthly in first instance.—Public Meeting of Bombay ladies of all communities decided on formation of Bombay Women's Council for social and other suitable public work, thus continuing usefulness of organisation of women's services during war.

FEBRUARY.

1st.—Mining and Geological Institute in India, annual dinner at Calcutta, Mr. G. C. Lathbury, new President, in chair.

2nd.—Announced by Secretary of State for India that in accordance with proposal made in Report of Secretary of State and Viceroy on Indian Constitutional Reforms following committee appointed to enquire into organization of India Office and relations between Secretary of State in Council and Government of India:—Marquis of Crewe, Chairman; H. H. Aga Khan, Viscount Esher; Lord Inchcape; Mr. B. N. Basu; Sir J. B. Brunyate; Lieut.-Colonel Godfrey Collins; Mr. Harry Gosling; Professor A. B. Keith, Edinburgh University; Mr. Evelyn Murray, Secretary.

6th.—Imperial Legislative Council at Delhi, H. E. the Viceroy presiding and opening proceedings with lengthy speech.—Hon'ble Sir W. Vincent, Home Member, introduced Bill (afterwards known as the Rowlatt Bill) to make provision in special circumstances to supplement ordinary criminal law and for exercise of emergency powers by Government.

7th.—Obituary: General Sir John Watson, V.C., G.C.B., formerly of Bombay Army and old mutiny veteran.—Viceroy's Legislative

Council, Rowlatt Bill, after considerable discussion, referred to Select Committee.

9th.—H. E. Governor of Bombay arrived in Karachi on official visit to Sind.

13th.—Initial Meeting of Moderate politicians in Bombay decided to form Western India National Liberal Association.—Bombay Government in a *communiqué* stated lines on which they were prepared to assist in financing Co-operative Housing Societies.

19th.—Imperial Legislative Council.—Hon. Sir James Meston, Finance Member, introduced Excess Profit Tax Bill, which was referred to Select Committee.—Secretary of State announced revised rate of pay for officers of Imperial Indian Police from rank of Deputy Inspector-General downwards.

20th.—H. M. Habibullah Khan, Amir of Afghanistan, shot dead while asleep at Jelalabad.

23rd.—Celebration of 20th anniversary of opening of St. Thomas' Cathedral, Bombay.—Verdict given for defendant with costs in case brought in London against Sir Valentine Chirol by Mr. Bal Gangadhar Tilak for defamation, the action arising from Sir V. Chirol's description of Mr. Tilak's political activities.

MARCH.

3rd.—Official Afghan reports announced that Sardar Narsulla Khan, Naib-us-Saltanah, had renounced his claims to the Throne of Afghanistan and sworn allegiance, with all civil, military and religious representatives, to Sardar Amanulla Khan, Ain-Ud-Daula, third son on His late Majesty Habibulla Khan.

4th.—Lord Sinha of Raipur delivered maiden speech in House of Lords and received warm congratulations from various peers on his appearance.

6th.—Bombay Municipal Corporation unanimously resolved to present address of welcome to Right. Honorary Admiral Viscount Jellicoe of Scapa on his approaching visit to Bombay.

8th—10th.—Imperial Legislative Council, Budget Debate.

10th.—H. E. Governor of Bombay formally opened Exhibition of War Relics and Naval Pictures in Royal College of Science, Bombay.—Government of India's report on Indian Education in 1917-18 published. It showed general increase of pupils and increase of 4,164 in the number of schools, the percentage of those under instruction having risen from 3.2 to 4.26 per cent. of population.

11th.—Imperial Legislative Council Budget Discussion—Non-official resolutions—Government of India announced despatch of their first despatch to Secretary of State dealing with general principles of Reform Scheme had been despatched.

12th.—Imperial Legislative Council—H. E. Commander-in-Chief obtained leave to introduce Bill to extend operation of Indian Defence Force Act, 1917, this being *interim* measure to meet immediate requirements pending constitutional organisation and training of force that will be required to replace the Indian Defence Forces under post bellum conditions.—Hon'ble Sir William Vincent, Home Member, moved consideration of Select Committee's report on Emergency Powers (Rowlatt) Bill on which there was considerable debate.—Hon'ble Sir James Meston, Finance Member, presented Select Committee's report on Excess Profits Duties Bill.

14th.—Lord Jellicoe landed in Bombay—Imperial Legislative Council.—Debate on Rowlatt Bill continued till 8-30 p.m., when consideration of Select Committee's report was concluded.

18th.—Imperial Legislative Council.—Rowlatt Bill, now become the Anarchical and Revolutionary Crimes Bill, finally passed by 35 votes to 20.—Government of India announced suspension of Central Recruiting Board and establishment in its place of an Indian Soldiers' Board to look after interests and welfare of serving, disabled, or diseased Indian soldiers and non-combatants and their dependents.—Government policy of largely expanding long-distance telephone communications in India announced—Lord and Lady Willingdon left London *en route* to Madras, to Governorship of which Lord Willingdon appointed.

19th.—Imperial Legislative Council—Excess Profits Duties Bill passed.—Bill to supplement Punjab Courts Act, 1918, to facilitate Punjab Provincial Bill for establishment of a High Court, introduced and passed through all stages.

20th.—Bombay Branch of European Association at its annual meeting specially considered proposed political reforms, Chairman announcing that the Association proposed to lay before Government the views of Europeans throughout India on the subject.

21st.—Imperial Legislative Council.—Indian Budget in its final form presented, and Council Session concluded.

25th.—H. E. the Viceroy arrived in Baroda on commencement of short tour to several Native States, this being first Viceregal Visit to Baroda since 1909.

26th.—Special Meeting of Calcutta Branch of European Association. Mr. T. W. Welby, Secretary, gave address on political reforms and discussion on same subject followed. It was announced that the Association had 8,000 members and were admitting ladies to membership—H. E. Governor of Bombay arrived at Ahmedabad in commencement of brief tour in Gujarat, specially in famine districts.

27th.—H. E. Viceroy in course of his tour arrived at Hyderabad, Deccan.

30th.—Farewell banquet in Madras to H. E. the Governor and Lady Pentland.

31st.—A "Day of humiliation and prayer" was observed in Delhi when masses of people, at instigation of political agitators, demonstrated against Rowlatt Act, the mob became riotous and military had to fire upon them.

APRIL.

1st.—Bombay Government issued a note reviewing famine situation, showing that though practically all districts in Presidency are affected, general conditions of people continued on whole satisfactory, relief measures being adequate and provision for necessary medical relief in case of outbreak of disease having been made,

2nd.—Bombay Chamber of Commerce annual meeting, Chairman, Hon. Mr. M. N. Hogg, specially urged shorter hours and better housing for working-classes in the city and warned European community of necessity of their taking more active part in political life.

6th.—Meeting to protest in Bombay against recent legislation to deal with anarchical and

revolutionary crime in India, Mr. M. K. Gandhi addressing large crowd of people who came to bathe on the sea-face in the morning and a few shopkeepers and gharrivalas keeping holiday in response to his appeal for suspension in business in the city for purposes of prayer and fasting.

7th.—Satyagraha Sabha in Bombay decided to start publication and dissemination of proscribed literature and Mr. M. K. Gandhi and others sold literature of this kind in the streets, object being to protest against recent legislation for dealing with anarchy and revolution.

10th.—Mr. M. K. Gandhi, while travelling by train to the Punjab to take part in political activities there, was served with an order by the Punjab Government forbidding him to enter the Province and on his refusal to obey, was taken from his train, placed in another and returned to Bombay. Great excitement was caused in various parts of India by reports that he had been arrested. Disturbances occurred in Bombay, Ahmedabad, Lahore and Amritsar, several English people being murdered in Amritsar, while at Virangam the Aval Karkun was burned live.

11th.—Lord Sinha at opening of Peace Conference in Paris announced that representatives of India whole-heartedly accepted the Labour Convention now that it made special allowance

for labour conditions in India and other countries differing in this respect from those of the West.

14th.—Martial Law proclaimed in Lahore and Amritsar districts, Government of India being satisfied that "a state of open rebellion" exists there.

16th.—H. E. the Governor of Bombay having summoned large gathering of representative citizens of Bombay warned them that the disquietitude over the Rowlatt Act was being exploited by people with dangerous aims and urged that leaders of public opinion should announce their disapproval of the revolutionary spirit and set their faces against doctrines of lawlessness being taught. He assured them that for the restoration of peace and order Government would discharge its own duty with the ample powers at its command.

17th.—Order and peace practically restored in Delhi, Amritsar and surrounding districts as result of measures taken under Martial Law.

18th.—Mr. M. K. Gandhi, in view of sudden outbreaks in various parts of Bombay and Punjab, advised Satyagrahis temporarily to suspend the disobedience of civil laws in which he had formerly encouraged them.

25th.—Bombay Millowners' Association annual meeting. The Chairman, Mr. C. N. Wadia, laid stress on necessity of ameliorating condition of millworkers in Bombay.

MAY.

2nd.—Afghan troops invaded British territory beyond Khaiber Pass under order of new Amir, Amanulla Khan.

3rd.—Government of India, in response to recent recommendation by Imperial Legislative Council, announced appointment of a Committee to investigate prison administration, with special reference to recent legislation and experience in western countries.

12th.—Demobilisation of British troops from Mesopotamia and India, with certain exceptions, topped on account of Afghan War—Lieutenant-governor of Punjab (Sir Michael O'Dwyer) at Government House, Lahore, received farewell addresses from deputations representing various communities who paid tribute to his statesmanship and expressed satisfaction that his Honour had firmly nipped in the bud the rebellion recently broke out in the Province. Sir Michael, replying, regretted that despite his warnings excitement of the passions of the people had led to rebellion and necessitated the proclamation of Martial Law, but said the evil of Martial Law was better than the greater evil of Mob-law. He bade farewell to the Province.

Secretary of State for India raised price of Council Drafts from 1s. 6d. to 1s. 8d.

16th.—Reports of Franchise Committee and Committee on Division of Functions, in connection with new reform scheme, published.

16th—17h.—Afgans heavily defeated at Dakka.

22nd.—Indian Budget introduced in House of Commons. King's Birthday Honours List in India included two G.C.S.I., two K.C.S.I., 7 C.S.I., 4 K.C.I.E., 31 C.I.E., 3 K.B.E., 2 D.B.E., 29 C.B.E., 92 O.B.E., 174 M.B.E., and numerous lesser distinctions.

26th.—Government of India's Despatch on Reform Scheme, after considering opinion of Provincial Governments and various public bodies and others, published.

29th.—Announced by Government of India that Secretary of State had appointed official and non-official committee to consider and report upon Indian Currency and Exchange problems.

30th.—India Reforms Bill published by Parliament.

Secretary of State issued explanatory memorandum regarding Indian Reforms Bill.

31st.—Violent cyclonic storm passed over Arabian Sea. It continued until 2nd June.

JUNE.

3rd.—Amir Amanulla Khan sent in letter, dated 28th May, asking for peace.—Government replied to question in House of Commons that Sir Sankaran Nair resigned Membership of Viceroy's Executive Council because he differed from his colleagues regarding continuance of Martial Law in the Punjab.

4th.—Government of India informed Amir terms on which they would grant armistice.

5th.—Afghan Commander-in-Chief retired hurriedly in front of British troops, leaving much munitions and stating that the Amir had ordered him to suspend hostilities.

9th.—Government of India on advice of Lieutenant-Governor of Punjab abrogated Martial Law in that Province as from midnight, except in regard to certain areas where its maintenance was considered necessary for military reasons.

5th.—Secretary of State (Mr. Montagu) moved second-reading of the Government of India Bill in Commons.

15th.—An English (Vickers-Vimy-Rolls Royce) biplane, 700 h.p., landed at Clifden (Galway) after a 16-hour flight across Atlantic from Newfoundland, piloted by Captain J. A. Leocks D.S.C., and navigated by Lieutenant A. W. Brown, both of whom were knighted by H. M. the King Emperor on their arrival in England, by air next day. (Sir J. Alcock was killed while trying a new machine six weeks later.)

17th.—Parliamentary Bill for authorising new constitutional reforms in India officially issued to press in India.

25th.—News published of abortive attempt of Amir of Afghanistan to obtain financial assistance from Bolsheviks at opening of hostilities against India.

28th.—German Peace Treaty signed in Paris.

JULY.

1st.—Governor of Bombay arrived Ahmednagar at commencement of brief Deccan tour.

2nd.—English airship R.-34, commander Major G. H. Scott, left Scotland for flight to New York and back.

3rd.—House of Commons passed by 336 votes to 23 appointment of members to Lords and Commons Joint Committee on India Reforms Bill.

English airship R.-34 reached Mincola, near New York, U.S.A., having completed the passage from England without assistance.

7th.—Bombay Legislative Council, Poona, H. E. the Governor presiding.—Peace Congratulations to His Majesty. Budget discussion.

8th.—Bombay Legislative Council.—Bill further to amend the Government occupants (Sind) Act, 1919, passed through all stages.—Private Resolutions.

9th.—Bombay Legislative Council.—Private resolutions. Sessions closed.

12th.—R-34 landed at Pulham, near London, after successful return voyage from America.

14th.—Government published summary of proposals by Committee on Home Administration of Indian affairs, main recommendations being for substitution of Advisory Committee for Secretary of State in place of India Council and recommendation against establishment of Select Committee of House of Commons on Indian affairs.

16th.—Parliamentary Joint Committee on Indian Reforms Bill held first sitting.

17th.—H. H. Maharaja of Bikaner arrived in Bombay on return from Peace Conference and was accorded cordial reception by some leading Indian Princes who came to Bombay to meet him and given reception by Western India National Liberal Association.

19th.—Festivities in celebration of Peace observed throughout India in common with rest of British Empire.

25th.—Governor of Bombay reached Belgaum at commencement of tour in Southern Mahratta Country.

26th.—Sir Hamilton Grant, representing Government of India, and Afghan Delegates met at Rawalpindi to discuss peace.

AUGUST.

2nd.—H. M. King-Emperor specially reviewed at Buckingham Palace Indian Contingent which arrived too late to participate in Peace Celebrations.

4th.—Despatch by H. E. Commander-in-Chief in India on part played by India, including Native States, in prosecution of war published in India.

8th.—Peace with Afghanistan signed at Rawalpindi.

9th.—Report of Calcutta University Commission of 1917-19 published, report proper and members' minutes comprising five volumes of 2,025 pages and stating that their another eight volumes not yet ready.

11th.—Secretary of State raised private Council Bills from 1s. 8d. to 1s. 10d.

23rd.—Obituary: Rt. Rev. Aloysius Gyr, S. J. Administrator Apostolic in Bombay.—Boundary Commission established by Afghan Peace Treaty for delimitation of Indo-Afghan frontier west of Khaiber began work.

30th.—Deputation to Secretary of State in London regarding treatment of Indians in South Africa. Mr. Surendranath Banerjee read a statement outlining latest position. Secretary of State said Commission of Inquiry promised by South Africa offered best hope of satisfactory solution and he had suggested not a domestic but an Imperial inquiry and had asked that Indian Government should be directly represented on Commission by one official and one non-official.

SEPTEMBER.

3rd.—Imperial Legislative Council, H. E. the Viceroy presiding, Simla. The Viceroy in opening the proceedings spoke for over an hour.—The Hon'ble Mr. Shafi introduced the Sea-Customs Act Amendment Bill, the Provident Funds Act Amendment Bill and the Census Bill (for a Census in 1921).—The Hon'ble Mr. W. Wilson brought a Bill to Amend the Indian Neutralization Act 1852 and a Bill to provide for more Effectual Control over the Administration of Charitable and Religious trusts.

4th.—Annual Report of the new Bombay Department of Industries showed the development of a large number of measures for assisting the foundation and growth of a variety of industries in the Presidency.

8th.—Constantinople report states that the Turkish Government propose to sell the famous Peacock Throne of Delhi for £750,000. It was pointed out that the Peacock Throne which formerly stood in Dewan-i-Am, Delhi, if it still exists, is at Teheran.

9th.—Full text of new Anglo-Persian agreement published in India.

10th.—Imperial Legislative Council.—On the motion of the Hon'ble Mr. Sarma a resolution tendering enthusiastic and loyal devotion and allegiance to H. M. the King Emperor on the completion of peace and conveying the thanks of the people of India to the Army and Navy and Air Force for their services during the war, was carried with acclamation.

11th.—Imperial Legislative Council.—Bills introduced to amend the Indian Coinage Act, the Cantonments Act, the Cinematograph Act, to remove Restriction on the Withdrawal of Capital from the Money Market by Companies and to amend the Indian Merchant Shipping Act, the Indian Tariff Act and the Indian Arms Act.—The Hon'ble Mr. Shafi introduced the Dacca University Bill, which was received with general approval.

12th.—The Indian Peace Contingent left London to return to India.

15th.—Bombay Provincial Co-operative Conference opened in Poona, H. E. the Governor presiding. His Excellency commented upon extraordinary progress made by co-operation in the Presidency and warmly praised the work of Mr. R. B. Ewbank, I.C.S., Registrar.—Imperial Legislative Council. Private Resolutions.

16th and 17th.—Imperial Legislative Council. Private Resolutions.

18th.—Imperial Legislative Council.—Punjab Indemnity Bill introduced.—Bombay Legislative Council, Poona. Bill further to amend the Bombay District Municipal Act, 1901, introduced.—Important speech by Lord Curzon at Government Banquet in London to the Persian Foreign Minister explaining and justifying the new Anglo Persian Agreement.

19th.—Bombay Legislative Council.—Private Resolutions.—Imperial Legislative Council. Punjab Indemnity Bill Debate.

23rd.—Imperial Legislative Council. Private Resolutions.—Sir George Buchanan opened a lively discussion in the *Times* on administrative policy in Mesopotamia, contending that money was being wastefully expended on schemes which could not become profitable within a prolonged period.

24th and 25th.—Imperial Legislative Council. Numerous minor bills recently introduced were passed.—Punjab Indemnity Bill passed.

25th.—Government of India in letters to the Chambers of Commerce outlined their policy regarding civil aviation, its principle features being encouragement of one large organization for inaugurating and maintaining a mail service throughout the land and that the air-transport organization should not be dependent on any particular aircraft construction company.

OCTOBER.

13th.—Indian Railway Conference opened at Simla, Col. Cameron presiding.

16th.—Government of India in a Resolution defined the conditions under which the members of the public services may resign their appointments.

18th.—Government of India published important Canadian and Australian Official Communications relating to the reciprocity resolution of the Imperial Conference regarding emigration from India to the British Dominions, the correspondence showing that they endorsed the reciprocity principle.

passed second reading of Indian Reform Bills, Features of debate being remarkable speech by Lord Sinha.

13th.—Indian Peace Celebration commenced continuing for three days.

18th.—House of Lords finally passed Indian Reform Bills.

25th.—H. M. King Emperor addressed lengthy message to the Viceroy, Princes and his subjects in India, announcing the enactment of the Reforms Bills and showing how it was a natural sequel to the political development which has constantly marked progress of British rule in India.

26th.—Indian National Congress opened at Amritsar.

29th.—All-India Moslem League annual Session, Amritsar.

30th.—All-India Moderate Conference annual Session commenced in Calcutta.

Bibliography of India.

The general work of reference in one compact volume about India is still the late Sir William W. Hunter's *The Indian Empire: Its Peoples, History and Products* (Smith Elder, 1893, 28/-) which contains within its 800 pp. all the information, excellently arranged and indexed, that the general reader requires about this country. Its historical sections are particularly good giving a rapid and comprehensive bird's-eye-view of the course of Indian history from the advent of the Mahomedans in the eighth century down to nearly the close of the nineteenth century. Its statistics are based on the Census of 1891 and are therefore somewhat out of date. But, with this slight drawback which can be remedied by consulting the latest annual "Statistical Abstract" (see below), it gives in the compass of one volume a comprehensive view, neither too blurred nor too diffuse, of the Indian Empire and its past and present state. A more detailed account of India is to be found in the first four volumes of *The Imperial Gazetteer of India* (Clarendon Press, 1907-08, 6/- each). These volumes, which are introductory to the alphabetical Gazetteer (Vols. V-XXIV), are an expansion of Hunter's one volume work mentioned above; but all the chapters, with the exception of those on the history of British Rule, have been rewritten by expert writers who have been in most cases Indian administrators also. The statistics in these volumes are based on the Census of 1901. The second volume of the *Oxford Survey of the British Empire* (Clarendon Press, 1914, 14/-) is mostly devoted to India and contains an excellent concise account by various well known writers of the Indian Empire as it is to-day. The statistics of this volume are based on the latest Census of 1911. Sir Thomas Holdich's volume on *India in the "Regions of the World"* Series (Clarendon Press, 1904, 7/6) is a compact geographical account by an authoritative writer. The same author's *Gates of India* (Macmillan, 10/-) is a useful historical and geographical work on the North-West Frontier of India. Dr. George Smith's *Student's Manual of the Geography of British India* (Murray, 1882, 7/6) may still be used with profit, though parts of it are obsolete. Sir Thomas Holderness (fourth) edition, 1911, of Sir John Strachey's *India*, originally published in 1888, contains the best, succinct account of Indian administration and progress (Macmillan, 1911, 10/-). The same editor's little book in the Home University Library, *Peoples and Problems of India* (Williams and Norgate, 1912, 1/-) is a useful introduction to the study of present day India. A very good *Atlas of India* is published as Vol. XXVI of the *Imperial Gazetteer* (separately, 15/- Clarendon Press, 1909). It contains 28 general and 18 provincial maps besides 16 plans of Cities, including 3 of Bombay, 2 of Calcutta and 1 of Madras, Delhi, Simla, etc., each. A somewhat older though still excellent atlas is *Constable's Hand Atlas of India* (Constable, 1893, 14/-). It has 60 maps and plans and is accompanied by an index of 86 pp. The companion volume *Hand Gazetteer of India* by W. H. Bartholomew (Constable, 1894, 12/-) is a very concise gazetteer based on the second

edition of 1886 of Hunter's *Imperial Gazetteer*. An older and fuller gazetteer, though still having the advantage of being in one compact volume, is Lethbridge and Wollaston's revised abridgment of *Thornton's Gazetteer of India* (W. H. Allen, 1888, 21/-).

Official Publications.—The principal official publications of general interest and utility are the Annual Parliamentary Blue-Book well known as *The Moral and Material Progress and Condition of India* (issued about the middle of the year, Eyre and Spottiswoode, 1/6) and its accompaniment *The Statistical Abstract for British India* (issued towards the close of the year, about 1/6); the report on the Census of 1911 (Vol. I, Calcutta, Rs. 5, Text, Vol. II, Appendix giving tables, etc.); *Statistics of British India* (4 Vol., Calcutta) Administrative, Judicial, &c., annual *Statement of the Trade of British India* with Foreign Countries (Calcutta) and the annual *Review of Trade* (Eyre and Spottiswoode, 2/-); *Financial Statement of the Government of India* (Eyre and Spottiswoode). Every ten years is issued an elaborate review of the period as a Decennial number of the Moral and Material blue-book (noted above), and those by J. S. Cotton (pub. 1885) and by Sir Athelstane Baines (pub. 1894) are specially valuable. A "Memorandum on some of the Results of Indian Administration during the past Fifty Years of British Rule in India" issued in 1909 by the India Office (reprinted at Government Press, Calcutta, 1911, six annas, in a handy octavo) is a valuable summary of the improvements since 1858. A new publication, which attempts to outline the administrative problems of India and the way in which they are being met, was published in 1919 under the title of *India in the years 1917-1918*, by L. F. Rushbrook Williams, (Government Press, Calcutta), Re. 1.

History.—It is still the fashion to call James Mill's *History of British India* (Vols. I-VI up to 1805; continuation by H. H. Wilson, Vols. VII-IX, index Vol. X., last ed. 1858, W. H. Allen) the standard work on the subject, but it is out of date and in parts wrong-headed. No other author of equal ability and repute has treated the subject on a large scale, though Sir W. W. Hunter made the attempt but lived only to write two volumes dealing with the first century of the English in India up to 1700. (History of British India, Vols. I-II, 1899-1900, Longmans, 30/-). A masterly historical sketch of the whole period is to be found in Sir Alfred Lyall's *British Dominion in India*, (Murray, 1894, latest ed. 1907, 5/-) which is specially remarkable for the writer's theory that the British dominion in India grew and expanded on a regular plan foreseen by its founders and was not as is generally supposed the result of a happy chance. Another excellent and interesting sketch is contained in the first part of the *Historical Geography of India* by P. E. Roberts, who had assisted Hunter in the above mentioned work (Clarendon Press, 1916, 6/6). Miss Gabrielle Festings two works, *When Kings Rode to Delhi* (Blackwood, 1912, 7/6) and *Strangers Within the Gates* (Blackwood, 1914, 7/6) give a popular

but accurate presentation of the Mughal and British periods. Marshman's *History of India* (3 Vols., Longmans, 1871, 22-6) gives an excellent account, neither too detailed nor too concise, of the whole history and may be recommended as the most readable history of India till the Mutiny. There is an abridgment of Marsman in one volume (Blackwood, 6-). Trotter's *History of India*, recently revised and brought up to date by W. H. Hutton (S. P. C. K., 1917, 10/-) is a good and accurate compendium, as also is Meadows Taylor's *Students' Manual of Indian History* (Longmans, 7/6) which has long been well known for presenting a vast amount of facts in a small compass and in an agreeable style. For the Mahomedan period the standard work is Elphinstone's *History of India* (Murray, 16/-). A much more elaborate work for the same period is Sir Henry Elliot and Jas Dowson's *History of India as told by its own Historians* (8 Vols., 1867-1877, 8-8-0) giving translations of the chief Mahomedan historians. For the pre-Mahomedan period Vincent Smith's *Early History of India* (Clarendon Press, 3rd ed., 1914, 14/-) is the latest and best work. Mr. Vincent Smith is also the author of *The Oxford History of India*, from the earliest times to the end of 1911 (Clarendon Press). Romesh Dutt's *History of Ancient Civilisation in India* (2 Volumes, Trubner's Oriental Series, 21/-, 1893) and Mrs. Manning's earlier work *Ancient and Mediæval India* (2 Vols., 1869, 30/-, W. H. Allen) deal mainly with literature rather than history proper though they give a more or less vivid picture, of those early times.

Historical Biography.—The principal characters of Indian history, Hindu, Mahomedan and British such as Asoka, Babar, Akbar, Clive, Warren Hastings, Dalhousie, etc., are individually treated in the well known *Rulers of India* series of historical and biographical monographs (28 Vols., Clarendon Press, 1890-1902, 2/6 each). In the English *Men of Action* series (Macmillan, 2/6 each) there are also volumes on famous Anglo-Indian statesmen, such as Sir Alfred Lyall's *Warren Hastings*, Archibald Forbes' *Havelock*, Sir Richard Temple's *Lord Lawrence*, Sir W. Butler's *Charles Napier*. Among biographies of Anglo-Indian worthies may be mentioned as specially interesting and valuable Sir George Forrest's *Life of Lord Clive* (Cassell, two vols., 1919), Col. Malleson's *Warren Hastings* (Chapman and Hall, 1894, 16/-), Bosworth Smith's *Lord Lawrence* (2 Vols., Smith Elder, 1883, new ed., Nelson's series, 1/-). Herbert Edwardes and Merivale's *Sir H. Lawrence* (2 Vols., Smith Elder 1872), Sir W. Hunter's *Lord Mayo* (2 Vols., Smith Elder, 1875, 24/-), Sir W. Lee Warner's *Lord Dalhousie* (2 Vols., Macmillan, 1904, 25/-), Sir Alfred Lyall's *Lord Dufferin* (2 Vols., Murray, 1905, new ed., Nelson's series 1/-), Marshman's *Sir H. Havelock* (Longmans, 3/6), Martineau's *Sir Bartle Frere* (2 Vols., Murray, 1895, 32/-), Mallet's *Earl of Northbrook* (Longmans, 1910, 16/-), Lord Roberts' *Forty-one Years in India* (Macmillan, 1897, new ed. 6/-), Colebrooke's *Mountstuart Elphinstone* (2 Vols., Murray, 1884, 25/-), Trotter's *John Nicholson* (1897, Murray, 2/6) and *Bazard of India* (Outram) (Blackwood 5/-). Among noteworthy works treating of recent history since 1858 are Lovat Fraser's *India under Lord Curzon and After* (Heinemann, 1911, 16/-), Lady Betty Balfour's

Lord Lytton's Indian Administration (Longmans' 1899, 18/-), Sir W. Hunter's *Bombay, 1885-1900*, a Study of Indian Administration (Clarendon Press, 1892, 16/-), Col. Hanna's *Second Afghan War* (3 Vols., Constable, 1899-1907, 36/-), *Official History of the Second Afghan War*, (Murray, 1905, 21/-), Sir John Adye *Indian Frontier Policy*, a historical sketch (Macmillan 1897, 6/-), Trotter's *India under Victoria* (2 Vols., W. H. Allen, 1886, 30/-).

For the Indian Mutiny the standard history is Kaye and Malleson's *History of the Indian Mutiny* (new ed. 6 vols. Longmans, 21/-). Sir George Forrest's *History of the Mutiny* (4 vols., 1904-1914, Blackwood, 64/-) gives the chief records in the Indian archives. The best one-volume narratives are Malleson's shorter work, *Indian Mutiny* (in Messrs. Sceley's "Events of Our Own Times" series 5/-) and T. Rice Holmes' *History of The Indian Mutiny* (1883, W. H. Allen, new ed. Macmillan, 12/6).

Constitution and Administration.—The constitution of the Indian Government may be said to be in a flux, as important and far-reaching changes are under discussion and will be carried out with modifications of course in the near future. The contemplated changes have been embodied in the Report on Indian Constitutional Reforms, drawn up by the Secretary of State and the Viceroy (the Montagu-Chelmsford Scheme) and published in a handy octavo (Government Press, Calcutta, July 1918, one rupee). The present books on the Government of India will have to be thoroughly revised when these or other changes take effect. At the head of these books stands Sir Courtenay Ilbert's "*The Government of India* being a Digest of the Statute Law relating thereto with historical introduction and explanatory matter" (Clarendon Press, 1st ed., 1898; 2nd edition, 1907, 3rd ed., 1915, 14/-; the first edition contains important constitutional documents such as minutes, despatches, charters, etc., covering 130 pp. which have been omitted in the subsequent issues.) The Digest drawn up by Sir C. Ilbert many years ago has been now embodied in the main in the "Government of India Act of 1915", which contains the entire body of law relating to the Government of India and which has been officially issued in octavo form (price 7d. Eyre and Spottiswoode). A supplement to Ilbert's third edition gives a comparison between the Digest given in the book and the Act (1916, 8d.). The constitutional documents from the Regulating Act of 1773 down to the Consolidating Act of 1915 have been printed in handy form in P. Mukerji's *Indian Constitutional Documents* (1915, Calcutta, Thacker Spink, Rs. 6); of the second ed. Vol. II, Rs. 1 has been issued in 1918 containing an historical introduction divided into two parts dealing with English political institutions and the present working constitution of India. The important constitutional documents have been also included in A. R. Iyengar's *Indian Constitution* (1909, 2nd enlarged ed. 1913, Loganathan Madras, Rs. 3) which contains an historical view of the various administrative institutions. The documentary matter extends to nearly 250 pp. Chesney's *Indian Polity* (3rd ed. 1894 Longmans) gives an excellent historical view of the system of administration as it grew up from the early days of the English in India.

down to the last decade of the nineteenth century; but it is a little out of date at present and will be much more so in the future. Sir William Lee Warner's *The Citizen of India* (1897, Macmillan 2/6) gives in brief outline a very good sketch of Indian administration. H. A. D. Phillips *Our Administration of India* (1888, W. Thacker, London 6/-) gives an account of the Revenue and Collectorate Administration in all departments, and though this is done with special reference to Bengal, it is more widely useful. A Mackenzie's *How India is Governed* (1882, Kegan Paul, 2) is a very brief sketch of the Indian constitution and administration and of England's work in India. For the system of judicial administration Herbert Cowell's *History and Constitution of the Courts and Legislative Authorities in India* (1872, 2nd ed., 1884, Thacker Spink, Calcutta, Rs. 6) is still useful, for the historical part.

Economics, Famines, etc.—Baden Powell's *Land Revenue and Tenure in British India* 2nd ed., 1907, revised by Sir T. Holderness, with in appendix added in 1912, 5/-) gives an account of land revenue system in India. Sir W. Hunter's *Annals of Rural Bengal* (1868, new ed., 1897, Smith Elder, 16/-) and his *Orissa* (2 vols., 1872, Smith Elder, 32/-) give a good idea of the economic condition of eastern India when it passed under British Rule. J. C. Jack's *The Economic Life of a Bengal District* (1916, Clarendon Press, 7/6) is an economic study of the people's life based on the minute data collected from innumerable families for the record of fifties of Bengal and is of great value in estimating the resources of the people and the economic results of British rule. Sir Theodore Morison's *Industrial Organisation of an Indian Province* (1906, Murray 10/6) reviews the principal economic facts and shows their relation to the abstract science of economics. The author treats specially of the United Provinces to which his personal observation was mainly confined. Morison's *Economic Transition in India* (1911, Murray) deals with the development of industrial and economic resources of the country. Romesh Dutt's *Economic History of India under Early British Rule* (1902, Kegan Paul, 16) and the same in the *Victorian Age* (1904, Kegan Paul, 1904) are a powerful though one-sided indictment of British economic and revenue policy. Dutt, who is a staunch champion of the Permanent System of land tenure in vogue in Bengal and of its introduction into other parts of India, in his *Famines and Land Assessments in India* (1899, Kegan Paul, 7/6) on the same lines asserts that famines are due to the land policy of the Government. In *Famines* the best books are the Reports of the Famine Commissions pub. 1885, 1887, 1898 (Eyre and Spottiswoode). A good narrative of the last great famine of 1899-1900 to be found in Vaughan Nash's *The Great Famine: its causes* (1900, Longmans, 6/-). On the earlier great Bengal Famine, Sir Bartle Blore's *The Impending Bengal Famine*, and now to prevent future famines in India, (1874, Murray, 5/-) is useful and suggestive. Charles Blair's *Indian Famines* in their historical and financial aspects (1874, Blackwood 5/-) contains good remarks on preventive and mitigating measures. Loveday's *History and Economics*

of Indian Famines (1874, 2/6) is a later book of the same kind. For public works, Railways, etc., Thornton's *Indian Public Works* (1875, Kegan Paul, 5/-) MacGeorge's *Ways and Works in India* (1893, Constable, 14/-), Horace Bell's *Railway Policy in India* (1894, 12/-), Deakin's *Irrigated India* (1893, Spon, 8/6) Buckley's *Irrigation Works of India* (1905 Spon, 42/-) Valentine Ball's *Coal Fields of India* (new edition, 1914, Calcutta) Report of the *Irrigation Commission* (1905, Eyre and Spottiswoode).

On Finance the work of the Strachey Brothers, Sir John and Sir Richard, *Finances and Public Works of India* (1882, Kegan Paul, 10/6) is valuable as describing the system of Indian Finance by persons who had intimate knowledge and personal experience. Reports of the Indian Currency Committee, 1893 and 1899, and of the Royal Commission on the administration of the expenditure of India, 1900, contain a vast mass of useful material *Indian Currency* (1878, Longmans 2/-), by Dunning Macleod, treats of the means of introducing a Gold Currency in India, and of extending Banking and Paper Currency. H. J. Tozer's *British India and its Trade* (1902) gives a good view of the trade and surveys its growth during the latter half of the nineteenth century. Prof. Lees Smith's *Studies in Indian Economics* (1909, Constable, 3/6) and Jadunath Sarkar's *Economics of British India* (4th ed., 1917, Sarkar and Sons, Calcutta) are good introductions to the subject. The former is a series of lectures delivered by the author for the Bombay Government.

The Protected States.—Mallett's *Native States of India* (1875, W. H. Allen, 18/-), gives an historical sketch of the various states. The author was then connected with the state of Mysore as the guardian of its young ruler. The work of another official who was connected with Mysore as its Resident at the end of his Indian career, Sir W. Lee-Warner, *Protected States of India* (2nd ed., 1910, Macmillan, 10/-, 1st ed., 1894, under title "Protected Princes of India") whilst giving what he calls an "Account of India under Home Rule", chiefly discusses the question of the position of these states in relation to the British Government. A Punjab official, Sir Charles Tupper, in his *Our Indian Protectorate* (1893, Longmans, 16/-) similarly treats of the relations between the British Government and its Feudatories, but goes more into the past and has instructive chapters on indigenous home rule under the Mahrattas, the Sikhs, the Mahomedans, etc. This valuable work is now thoroughly out of print, but a good vernacular translation in Gujarati by A. N. Buch (1900 Rajkot) is available. Sir Lepel Griffin's *Punjab Chiefs* (1865 Trubner) and *Rajas of the Punjab* (1870, 2nd ed. 1873, Trubner, 20/-) give in considerable detail the history of the principal Punjab states like Patiala, Kapurthala, Nabha, etc. Massy prepared a new edition of the former book (1889, Allahabad, Pioneer Press) and completed it by another *Chiefs and Families of Note in the Punjab* (1890, Allahabad, Pioneer Press) and they give short notices of all the ruling chiefs of the Punjab. Aberigh Mackay who was tutor to the Raja of Ratlam in Central India and Principal of

Rajkumar College at Indore, wrote on the *Chiefs of Central India* (1879) and on the *Native Chiefs and their States in 1877* (1878). Both books are noteworthy. Aitchison's *Treaties, Engagements and Sanads* relating to India and the neighbouring countries (3rd ed., 1893, 11 volumes, Calcutta, Government Press, Rs. 34) is the standard collection of all the treaties with the Native Feudatory States. The

relations with the Nizam are investigated in H. G. Brigg's *The Nizam* (2 vols., 1861, Quaritch, 28/-) and Hastings Fraser's *Our Faithful Ally, the Nizam* (1865, Smith Elder 18/-). The relations with the Gaekwar of Baroda are exhaustively treated in *The Guicowar and his Relations with the British Government* (1863, Education Press, Bombay) by Col. R. Wallace who was Resident at Baroda.

Stock Exchange.

There are about 446 Share and Stock Brokers in Bombay. They carry on business in the Brokers' Hall, bought in 1899 from the funds of the **Share and Stock Brokers' Association** formed to facilitate the negotiations and the sale and purchase of Joint Stock securities promoted throughout the Presidency of Bombay. Their powers are defined by rules and regulations framed by the Board of Directors and approved by the general body of Brokers. The Board has the power to fix the rates in times of emergencies. It is composed of Sir Shapurji Broacha (Chairman), Mr. Vurjivandas Tribhovandas, Mr. Maneckji Pestonji Bharucha, Mr. D. D. Kanga, Mr. Naserwanji Pheroza Shah Karani, Mr. Nagji Motichand, Mr. Chunilal Veerchand, Mr. Nanabhoj Tullockchand, Mr. Maneklal Jethabhai, Mr. Dinsha Bejunji and Mr. Jehangir Bhikaji (Secretary).

At first the admittance fee for a broker was Rs. 5 which was gradually raised to Rs. 7,000. The fee for the Broker's card has increased and it was recently sold by public auction for Rs. 21,800. The rules of the Association were revised in October 1916 and from the New Year the purchaser of shares has to pay the stamp and transfer fee instead of the seller. There are two classes of Exchange Brokers, Europeans and Indians, the latter being certified for recognition by the native Stock Exchange. Business in Government Paper and all other Trustees' Authorised Securities is carried on under the rules of the Bombay Stock Exchange, but in the street outside the hall.

In November 1917 a second Stock Exchange was opened in Bombay, with its headquarters in Apollo Street. The directors of this exchange known as the **Bombay Stock Exchange, Ltd.**, are Mr. Rameswandas Birla, Rai Bahadur Sir Sarupchand Hookamechand, Kt., Mr. Kastoorbhai M. Nagarshett, Mr. Fatechand Ruiya, Mr. Jyotendra. L. Mehta, Mr. Shreeram Jhoogunvala, Mr. Lachhmandas Daga, Rai Bahadur Jannalal Bachhraj, Mr. Madanlal Chowdry, Mr. W. T. Halai, Mr. Naranji Dayal and Mr. Surbhai G. Desai (*ex-officio*).

For many years the **Calcutta Share Market** had its meeting place in various gullies in the business quarter and was under no control except that of established market custom. In 1908 the **Calcutta Stock Exchange Asso-**

ciation was formed, a building was leased in New China Bazar Street now called Royal Exchange Place, a representative committee was formed, and the existing trade custom were focussed into rules drawn up for the conduct of business. Admittance as a member of the Stock Exchange is by vote of the committee, and the entrance fee is at present Rs. 500. The market custom differs very materially from that of most other Stock Exchange since there are no settlement days, delivery is due the second day after the contract is passed and sales of securities are effected for the most part under blank transfers. Another difference in procedure as compared with the Londo Stock Exchange is that there are no "Jobbers in the Calcutta market. The Dealers who take their place, more or less, are not compelled to quote a buyer's and a seller's rate and are themselves Brokers as well as dealers, calling upon the Banks and other clients and competing with Brokers.

There are about 150 members, besides outside brokers, the former consisting of European, Jewish, Marwari, and Bengalee firms. The Marwaris predominate. The volume of *bona fide* investment business is comparatively small and insufficient for the number of Brokers. The principal business transacted on the Calcutta Stock Exchange is connected with the shares in Jute Mills. Coal Companies, Tea Companies registered in India, Miscellaneous industrial concerns (such as Paper, Flour, Sugar), Railway and Transit Companies and Debentures, the latter comprising those of Industrial concerns and Trustee Investment Securities, namely, Municipal and Port Trust Debentures. When speculative operations are being actively engaged in, which frequently take the form of forward contracts for delivery in three months time, the value of securities changing hands may aggregate as much as a crore of Rupees per month, but since the trade is not constant and one year differs very much from another it would be difficult to estimate what the average annual turn-over would amount to. The association has an honorary secretary and is not at present affiliated to the Bengal Chamber of Commerce.

There are two firms of Brokers in Madras and a Stock Exchange is to be opened.

Indian Stamp Duties.

	Rs. a.		Rs. n.
<i>Acknowledgment</i> of Debt ex. Rs. 20 ..	0	1	
<i>Affidavit</i> or Declaration	1	0

		Revocation of—Ditto, but not exceeding
		<i>Warrant for Goods</i>

WIRELESS TELEGRAPHY.

The annual report of the Indian Telegraph Department for 1915-16 states that the number of wireless stations in India and Burma has increased from 9 in 1910-11 to 19 in 1915-16. The number of messages dealt with in the latter year by the nine coast stations was 83,719.

Licences to Officers.—The Government of India have decided that the granting of licences to military officers in respect of wireless telegraph apparatus used for experimental purposes shall be regulated by the following general principles: (1) When an officer conducts experiments in wireless telegraphy in his official capacity at the expense of Government no licence is required, but only executive permission, which may be given so far as the Telegraph Department is concerned by the Director-General, Posts and Telegraphs.

(2) When an officer carries on experiments as a private individual at his own expense, he

must obtain a licence. If the approval of the military authorities is required to what he proposes to do, he should obtain such approval before the Director-General, Posts and Telegraphs, is approached. The licence will then be submitted by the Director-General, Posts and Telegraphs, for the sanction of the Government of India.

(3) With reference to the above, attention is drawn to the necessity for applying for licences to own and use wireless telegraphy apparatus or installations, experimental or otherwise. Applications for such licences will be submitted through the Chief of the General Staff and will contain particulars regarding the apparatus showing (a) system it is proposed to employ, (b) maximum range of signalling with applicant's own receiving apparatus, (c) power (current and voltage), (d) source of power.

Who's Who in India.

- ACHARIYAR, P. SIR RAJAGOPALA, K.C.S.I.** (1920); C.I.E. Member of Madras Executive Council. *Educ.*: Madras University. Entered I.C.S., 1888. Diwan of Cochin, 1896-1902; Diwan of Travancore, 1907-14; Secretary to Government of Madras, 1914. *Address*: Madras.

Commander, 1906. Captain, 1917. Five years Port Officer and Shipping Master, Calcutta. Address:* R.I.M. Dockyard, Calcutta.
- VISVESVARAYA, MOKSHAGUNDUM, SR. K.C.I.E., B.A., L.C.E., M.I.C.E.,** late Dewan of Mysore; *b.* 15 Sept. 1861. *Educ.:* Central Coll., Bangalore, and Coll. of Science, Poona. *Asst. Engineer, P.W.D. Bombay, 1884; Exec. Eng., 1899; Supdt. Eng., 1904; retired, 1908. Apptd. Sp. Consulting Eng. to Nizam's Govt.*

- 1909; Ch. Eng. and Sec., P.W. and R. Depts., Govt. of Mysore, 1909; App. Dewan of Mysore, Nov. 1912. *Address*: Bangalore.
- VOLKERS, ROBERT CHARLES FRANCIS, C.I.E.**; Sec. Railway Board, 1907-13; Accountant, P. W. D., since 1878; Examiner, 1894. *Address*: Calcutta.
- WACHA, SIR DINSHA EDULJI, Kt.**; *b.* 2 Aug. 1844; *Educ.*: Elphinstone Coll., Bombay. In Cotton Industry, since 1874; for 31 years served Bombay Mun. Corp., (President, 1901-02); for 28 years Mem. Bombay Mill-owners' Assoc. Committee, since 1889, and Bombay Imp. Trust since its formation in 1898; Pres. of 17th National Congress, Calcutta, 1901; and of Belgaum Prov. Conference, 1897; gave evidence before Royal Commission on Indian expenditure in 1897; Trustee of Elphinstone Coll.; also Chairman, Indian Merchants' Chamber and Bureau. *Publications*: pamphlets on Indian Finance and Economics, Agricultural Condition of India, Railways, Currency, Temperance, etc.; large contributor to leading Indian newspapers and journals for the last 35 years. *Address*: Jiji House, Ravelin Street, Fort, Bombay.
- WADDINGTON, CHARLES WILLOUGHBY, M.A., C.I.E., M.V.O., I.E.S.**; Tutor to H. H. the Maharajah of Jodhpur; Prin., Mayo Coll., Ajmer, 1903-18; *b.* 29 Dec. 1865. *Educ.*: Charterhouse; Oriol Coll., Oxon. *Address*: Mayo Coll., Ajmer.
- WADIA, C. N., C.I.E. (1919)**; Millowner. *b.* 1869. *Educ.*: King's Coll., London. Joined his father's firm, 1888. *Address*: Pedder house, Cumballa Hill, Bombay.
- WADIA, JAMSETJEE ARDASEER, J. P., 1900**; Merchant; *b.* 31 Oct. 1857; *Educ.*: Elphinstone Sch. and Coll. and served apprenticeship in Dickinson Akroid & Co. of London; Promoter and Director of Cotton and other industrial concerns: Member of Bombay Mun. Corpn., since 1901. *Publications*: Writer on Industrial and Economic subjects: published two pamphlets against closing of the Mints. *Address*: Wilderness Road, Malabar Hill, Bombay.
- WADYA, SIR HORMASJI ARDESAR, Kt. (1918)**, Bar-at-Law. *b.* 2 January, 1849. *Educ.*: Elphinstone College, Bombay, and University College, London. M. Aimal, *d.* of the late Mr. Ardesar Hormasji of Lowji Castle, Patel. Called to the Bar, 1871. Personal Assisant to Mr. Dadabhai Naoroji, Dewan of Baroda, February 1874 to January 1875. Practised in Kathiawar since 1875. Trustee, Parsi Panchayat, 1912. Trustee of the late Mr. N. M. Wadia under his will. Recd. Kaiser-i-Hind Gold Medal, 1918. *Address*: 37, Marine Lines, Bombay.
- WALKER, MAJOR GEORGE KEMP, C.I.E.** Fell. of Royal Coll. of Vet. Surgs.; Major, I. C. V. D., Supdt. C. V. D., Bombay, *b.* 20 March 1872; *Educ.*: Warwick Sch.; R. V. C., London. Joined A. V. D., 1894; transferred to Civil, 1897. *Address*: Poona.
- WALKER, GILBERT THOMAS, M.A., C.S.I., F.R.A.S., Sc.D., F.R.S.**; Dir. Gen. of Indian Observatories, since 1904; *b.* 1868; *Educ.*: St. Paul's Sch.; Trinity Coll., Camb. (Senior Wrangler, 1889); Fell. 1891; Math. Lecturer, 1895. *Address*: Meteorological Office, Simla.
- WALKER, SIR JAMES, K.C.I.E., C.I.E.**, Commsr., Nagpur; Add. Mem., Imp. Council, 1913; *b.* 1861. *Educ.*: Aberdeen Univ.; Balliol Coll., Oxford. Served in executive branch of I.C.S., in Madras and C.P. *Address*: Nagpur.
- WALLIS, SIR JOHN EDWARD POWER, HON. JUSTICE, Kt., M.A.**; Chief Justice, Madras, since 1914; *b.* Nov. 1861. Called to Bar, Middle Temple, 1886; Adv. Gen., Madras, 1900-07; Vice-Chancellor, Madras Univ., 1908; Puisne Judge, 1907-14. *Address*: High Court, Madras.
- WALMSLEY, HUGH, M.A., I.C.S.**; Judge, Calcutta High Court, since 1915; *Educ.*: Merton Coll., Oxford. Ent. I.C.S., 1893. *Address*: High Court, Calcutta.
- WALSH, ERNEST HERBERT COOPER, C.S.I., I.C.S.**; *b.* 7 March 1865. *Educ.*: Trent; Univ. Coll., London; Middle Temple; Commsr., Burdwan Div., 1904; Bhagalpur Div., 1907; Mem., Imp. Council, 1912 and 1914; Commsr., Chota Nagpur Div., 1912; Mem., Royal Asiatic Soc. and Asiatic Soc. of Bengal. *Address*: Ranchi.
- WANKANER CAPTAIN MAHARANA SRI, SIR AMARSINHI, RAJ SAHEB OF, K.C.I.E.**; *b.* 4 Jan. 1879; *S.* 1881; *Educ.*: Rajkumar Coll. State has area of 425 sq. miles, and population of 32,653. Salute, 9 guns. *Address*: Wankaner.
- WARBURTON, JOHN PAUL, C.I.E.**; *b.* 28 Aug. 1840. Joined Pol. Dept., Punjab, 1864; Asst. Insp. Gen., Railway Police, 1894; retired, 1900. *Address*: Gilbert House, Kasauli.
- WARD, ARTHUR WILLIAM, M.A.**; Prof. of Physics, Canning Coll., Lucknow, since 1889; *b.* Waterloo, 1 Aug. 1858. *Educ.*: Liverpool Coll.; Liverpool Inst.; St. John's Coll., Camb.; Fell. and Mem. of Syndic, Allahabad Univ. Mem. of Senate, Benares Hindu Univ., 1916. *Address*: Badshah Bagh, Lucknow.
- WARD, THOMAS ROBERT JOHN, C.I.E., M.V.O.**; *Educ.*: Framlingham Sch., Cooper's Hill. Ent. P. W. D., 1883; on dep. with Seistan Boundary Commission, 1902-06; Engineer, Delhi Durbar, 1911; Engineer to Home Dept., Govt. India, for selection of site for new capital, Delhi, 1912; services lent for 18 months to King of Siam to inaugurate irrigation works in Valley of Menam Chao Phaya; Ch. Eng. and Sec. to Punjab Govt., 1915; Mem., Punjab Council, 1915; F.R.G.S. M.I.C.E.; M.A.M.C.E. *Address*: Lahore.
- WARNE, RT. REV. FRANCIS WESLEY**; Missionary Bishop to India, since 1900; *b.* 30 Dec. 1854. *Address*: Inayat Bagh, Lucknow.
- WATHEN, GERARD ANSTRUTHO, M.A.**; Prin. Khalsa Coll., Amritsar, since 1915; *b.* 28 Dec. 1878. *Educ.*: St. Paul's Sch.; Peterhouse, Camb.; Bonn; Paris. App. to I.E.S., 1905. Insp. of Chiefs' Colleges in India, 1909; Dean of Fac. of Arts, Punjab Univ., 1913-14. *Address*: Khalsa College, Amritsar.
- WATSON, CHARLES CUNNINGHAM, C.I.E.**; Commsr., Ajmer-Merwara; *b.* 1874; *Educ.*: Edinburgh Univ.; Christ Church, Oxford,

- Ent. I.C.S., 1897; Priv. Sec., Gov. of Bombay, 1909-12; Sec. to Govt. of Bombay, Pol. and Jud. Dept., 1912-14. *Address*: Ajmer.
- WATSON, HUBERT DIGBY, C.I.E.** (1919); I.C.S. *b.* 31 December 1869. *Educ.*: Harrow; Balliol College, Oxford. *m.* Florence Dorothy Usborne. In the Punjab Commission. *Publication*: Hazara Gazetteer. *Address*: Jullundur.
- WATT, REV. JOHN, M.A., D.D., F.C.S.**; Prin., Scottish Churches Coll., Calcutta; *b.* 1862. *Educ.*: Parish Sch., Methlick; Gram. Sch., Old Aberdeen; Aberdeen Univ.; New Coll., Edinburgh. Joined Duff Coll., Calcutta, 1888. *Address*: 4, Cornwallis Square, Calcutta.
- WEBB, HON. M. DE P., C.I.E.**; Founder of The War League of India; Chairman, Karachi Chamber of Commerce; *b.* Clifton, 1869. *Educ.*: privately. Engaged in mercantile pursuits. *Address*: Karachi.
- WEBSTER, JOHN EDWARD, C.I.E., I.C.S.** Dy. Commsr., Sylhet, Assam, since 1912; *b.* Ranchi, 3 Sept. 1871. *Educ.*: Charterhouse; Trinity Hall, Cam.; Ent. I.C.S., 1891. *Address*: Sylhet.
- WESTCOTT, Rt. Rev. F.** See Calcutta, Bishop of. **WESTCOTT, Rt. Rev. G. H.**; see Lucknow, Bishop of.
- WHEELER, SIR HENRY, K.C.I.E., C.I.E., C.S.I., I.C.S.**; Mem., Exec. Council, Bengal, since 1917. *Educ.*: Christ's Coll., Cam. Ent. I.C.S., 1891; Dy. Sec., Govt. of India, Fin. Dept., 1907-08; Sec., Royal Commission on Decentralisation, 1908-09; Fin. Sec., Govt. of Bengal, 1909-12; Home Sec., Govt. of India, 1912-16.
- WHEELER, THE REV. HUGH TREVOR, M.A.** (Dublin), Archdeacon of Lahore, 1919. *b.* 27 September 1874. *m.* Kathleen Gunning. *Educ.*: Trinity College, Dublin. Chaplain to the Forces, M.E.F., 1915. *Address*: Ch. Ch. Lodge, Simla.
- WHITE, MAJOR FREDERICK NORMAN, C.I.E., M.D.**; Asst. Dir.-Gen., I.M.S. (Sanitary), 1914; Sanitary Commsr., Govt. of India, Simla. *Address*: c-o Grindlay, Groom & Co., Bombay.
- WHITY, JOHN TARTON, C.I.E.**; Manager, Bettiah Raj under Court of Wards. *Educ.*: Clifton Coll.; New Coll., Oxford; Univ. Coll., London. Ent. I.C.S., 1898; *Address*: Champaran.
- WILLIAMS, CAPT. HERBERT ARMSTRONG, D.S.O., I.M.S.**; Resident Medical Officer, Rangoon General Hospital, since 1907; *b.* 11 Feb. 1875. *Address*: General Hospital, Rangoon.
- WILLIAMS, SYDNEY CHARLES, M.A.** (Cantab.), B.A. (London). Vice-Chairman, Calcutta Port Commissioners. *b.* 9 May 1876; *Educ.*: Kingswood Sch.; Bath, Univ. Coll., Aberystwyth and Trinity Coll., Cambridge. Priv. Sec. to Sir Edward, Holden 1900; Junior Sec. to Agent, E. I. Ry., 1900-03; Dy. Sec. to Agent, E. I. R., 1903-06; Secy. to Agent, E. I. R., 1906-14; Sec. Port Commissioners, Calcutta, 1914-16; Vice-Chairman, 1916. *Publications*: The Economics of Railway Transport, 1909; Article on Indian railways in Modern Railway Practice, 1913. *Address*: Port Commissioner's House, Calcutta.
- WILLINGDON, 1st Baron, of Ratton, cr. 1910.** FREEMAN FREEMAN-THOMAS; Governor of Madras, 1919. *b.* 12 Sep. 1866; *m.* 1892, Hon. Marie Adelaide, *d.* of 1st Baron Brassey; A.D.C. to Lord Brassey when Gov. of Victoria, 1895; M.P. (L.) Hastings, 1900-1906; Bodmin, Div. of Cornwall, 1906-10; Jun. Lord of Treasury, 1905-12; Lord-in-Waiting to H. M.; Governor of Bombay, 1912-18. *Heir*: Hon. Inigo Brassey Freeman-Thomas, *b.* 25 July 1899. *Address*: Government House, Madras.
- WILLIS, GEORGE HENRY, C.I.E., 1918; M.V.O.** Major, R.E., M.I. Mech. E., J.P.; Master of Mint, Bombay; *b.* 21 Oct. 1875; *Educ.*: St. Paul's Sch., London; R.M.A., Woolwich, R. E. 1895; Major, 1914. Arrived India, 1900; Deputy Mint Master, 1907; officiated as Mint Master till October 1915. Bombay representative of Indian Advisory Committee to Council of Institution of Mechanical Engineers. *Address*: H. M. Mint, Bombay.
- WILSON, CHARLES HENRY, C.I.E.**; Agent of Hong-Kong and Shanghai Banking Corporation, Bombay. *b.* 22 Oct. 1858. *Address*: Bombay.
- WILSON, CAPTAIN NEVILLE FREDERICK JARVIS, C.M.G., C.B.E., Director, R.I.M.**; *b.* 2nd Jan. 1865; *Educ.*: Gosport Military Academy. Merchant Service, 1878 to 1887; R.I.M. thence to date. *Address*: Marine House, Govt. Dockyard, Bombay.
- WINDHAM, LT.-COL. CHARLES JOSEPH, C.I.E.**; Resident in Western States of Rajputana, since 1910; *b.* 1867; Ent. Army, 1886; Indian Pol. Service, 1893; Pol. Officer with Ex-Amlir Yakub Khan of Kabul. *Address*: The Residency, Jodhpur.
- WINN, GILBERT FRANKLYN, I.S.O.**; Registrar, Home Dept., Govt. of India, since 1912; *b.* 1866. *Educ.*: Muir Central Coll., Allahabad. *Address*: Simla.
- WITHERS, LIEUT. EDGAR CLEMENT, C.I.E., R.I.M.**; Intelligence Officer, Persian Gulf. *Address*: Intelligence Department, Basra.
- WITTET, GEORGE, F.R.I.B.A., Director, Tata's Engineering Co. Ltd.** *b.* 26 November, 1878. Consulting Architect to the Govt. of Bombay, 1908-1919. *Address*: Byculla Club, Bombay.
- WODEHOUSE, LT.-COL. FREDERIC WILLIAM, C.I.E., I. A.**; Bombay Pol. Dept., Resident, Kolhapur and Pol. Agent, S. Mahratta Country States; *b.* 7 April 1867; *Educ.*: Westminster; Sandhurst. Joined Army, 1886; *Address*: The Residency, Kolhapur.
- WOOD, HON. SIR JOHN BARRY, K.C.I.E., C.S.I.**; Pol. Sec., Govt. of India, since 1914; late Resident, Indore; *b.* 1870. *Educ.*:

- Marlborough; Balliol Coll., Oxford. Ent. I.C.S., 1893; Under-Sec. to Govt. of India, Foreign Dept., 1899-1903; 1st Assist. in Baluchistan, 1903. Dy. Sec., Foreign Dept., 1906-10. *Address*: Ava Lodge, Simla.
- WOOD, WALTER GUNNELL, A.M.I.C.E., C.S.I.; Prin., Thomason C.E., Coll., Roorkee, since 1916; *b.* 19 Oct. 1861. *Educ.*: Wellington; R.I.E. Coll. Ent. P.W.D., 1882. Supdt. Eng., 1905; Ch. Eng. and Sec. to Govt., U. P., 1912-16. *Address*: Roorkee.
- WOODROFFE, JUSTICE SIR JOHN GEORGE, Kt., Puisne Judge, Calcutta High Court, since 1904; *b.* 15 Dec. 1865. *Educ.*: Woburn Park; Univ. Coll., Oxford (B.C.L., M.A.). Barr., Inner Temple, 1889; Advocate, Calcutta H. C., 1890; Judge, 1904; Offg. Ch. Justice, Bengal, Nov. 1915. *Address*: 4 Carnac Street, Calcutta.
- WOODYATT, MAJ.-GENERAL NIGEL GRESLEY, Kt. (1916), C.I.E. (1919). *b.* 30 March 1861, *m.* Florence Patterson, *e.d.* of A. B. Patterson, late I.C.S. *Educ.*: Shrewsbury. Entered Army, 1883. Served with Chitral Relief Force, 1895. G.O.C., Delhi, 1914-15. Conducted operations against the Bunerwals, August 1915. Commanded 3rd Infantry Bde. against the Mohmands, September and October 1915. Acting G.O.C., 6th Division, 1919. *Address*: Poona.
- WOOLACOTT, JOHN EVANS, correspondent of *The Pioneer* and of *The Times* at headquarters of the Govt. of India. *b.* 1862. *Educ.*: Milford Haven Sch., and Gr. Sch. Menaibridge. *m.* Anjoulina, *d.* of the late A. Seneca. On staff of *Central News*: Correspondent of *The Daily Mail* in Cairo and Paris. Assistant Editor, *The Economist*: City Ed. *The Tribune*: has edited *The Statesman* and *The Bombay Ga zette*. President, Institute of Journalists, 1908. Parliamentary Candidate, Glasgow, 1895. *Address*: Simla or Delhi.
- WYNDHAM, PERCY, C.I.E., R.G.S.: Commsr., Kumaon, since 1914; *b.* 13 Dec. 1867. *Educ.*: Giggleswick Sch.; Queen's Coli. Oxford, M.A., Joined I.C.S., 1889. *Address*: Naini Tal.
- YULE, SIR DAVID, Kt. (1912), Partner, Messrs. Andrew Yule & Co. *b.* 4 Aug. 1858. *m.* Annie Henrietta Yule, *d.* of late Andrew Yule. *Educ.*: R. High School, Edinburgh. Joined firm of Andrew Yule & Co., Calcutta, 1875. *Address*: 8 Clive Row, Calcutta.
- YUSUF, SIR HADJI MUHAMMED, Kt. *Address*: Bombay.

For many years Indian time was in a state of chaotic confusion. What was called Madras or Railway time was kept on all the railways; and each great centre of population kept its own local time, which was not based on any common scientific principle and was divorced from the standards of all other countries. It was with a view to remedying this confusion that the Government of India took the matter up in 1904, and addressed to the Local Governments, and through them to all local bodies, a long letter which reviewed the situation and made suggestions for the future. The essential points in this letter are indicated below:

"In India we have already a standard time, which is very generally, though by no means universally, recognised. It is the Madras local time, which is kept on all railway and telegraph lines throughout India and which is 5h. 21m. 10s. in advance of Greenwich. Similarly, Rangoon local time is used upon the railways and telegraphs of Burma, and is 6h. 24m. 47s. ahead of Greenwich. But neither of these standards bears a simple and easily remembered relation to Greenwich time.

"The Government of India have several times been addressed by Scientific Societies, both in India and in England, and urged to fall into line with the rest of the civilised world. And now the Royal Society has once more returned to the attack. The Committee of that Society which advises the Government of India upon matters connected with its observatories, writes:—'The Committee think that a change from Madras time to that corresponding to a longitude exactly 5½ hours east of Greenwich would be an improvement upon the existing arrangements; but that for international scientific purposes the hourly zone system, making the time 5 hours in advance of Greenwich in the west, and 6 hours in advance in the east of India, would be preferable.'

"Now if India were connected with Europe by a continuous series of civilised nations with their continuous railway systems all of which had adopted the European hour-zone system, it would be imperative upon India to conform and to adopt the second suggestion. But as she is not, and as she is as much isolated by uncivilised States as Cape Colony is by the ocean, it is open to her to follow the example of that and some other similarly situated colonies and to adopt the first suggestion.

"It is believed that this will be the better solution. There are obvious objections to drawing an arbitrary line right across the richest and most populous portions of India, and so as to bisect all the main lines of communication, and keeping times differing by an hour on opposite sides of that line. India has become accustomed to a uniform standard in the Madras time of the railways; and the substitution for it of a double standard would appear to be a retrograde step; while it would, in all probability, be strongly opposed by the railway authorities. Moreover, it is very desirable that whatever system is adopted should be followed by all Europeans and Indians alike; and it is certain that the double standard would puzzle the latter greatly; while by emphasising the fact that railway differed from local time, it might postpone or even altogether prevent the acceptance of the former instead of the latter by people generally over a large part of India. The one great advantage which the second

possesses over the first alternative is, that under the former, the difference between local and standard time can never exceed half an hour, whereas under the latter it will even exceed an hour in the extreme cases of Karachi and Quetta. But this inconvenience is believed to be smaller than that of keeping two different times on the Indian system of railways and telegraphs.

"It is proposed, therefore, to put on all the railway and telegraph clocks in India by 8m. 50s. They would then represent a time 5½ hours faster than that of Greenwich, which would be known as **Indian Standard Time** and the difference between standard and local time at the places mentioned below would be approximately as follows, the figures representing minutes, and F. and S. meaning that the standard time is in advance of or behind local time respectively:—Dibrugarh 51 S., Shillong 38 S., Calcutta 24 S., Allahabad 2 F., Madras 9 F., Lahore 33 F., Bombay 39 F., Peshawar 44 F., Karachi 62 F., Quetta 62 F.

"This standard time would be as much as 54 and 55 minutes behind local time at Mandalay and Rangoon, respectively; and since the railway system of Burma is not connected with that of India, and already keeps a time of its own, namely, Rangoon local time, it is not suggested that Indian Standard Time should be adopted in Burma. It is proposed, however, that instead of using Rangoon Standard Time as at present, which is 6h. 24m. 47s. in advance of Greenwich, a Burma Standard Time should be adopted on all the Burmese railways and telegraphs, which would be one hour in advance of Indian Standard Time, or 6½ hours ahead of Greenwich time, and would correspond with 97° 30' E. longitude. The change would bring Burma time into simple relation, both with European and with Indian time, and would (among other things) simplify telegraphic communication with other countries.

"Standard time will thus have been fixed for railways and telegraphs for the whole of the Indian Empire. Its general adoption for all purposes, while eminently advisable, is a matter which must be left to the local community in each case."

It is difficult to recall, without a sense of bewilderment, the reception of this proposal by various local bodies. To read now the fears that were entertained if Standard Time was adopted is a study in the possibilities of human error. The Government scheme left local bodies to decide whether or not they would adopt it. Calcutta decided to retain its own local time, and to-day Calcutta time is still twenty-four minutes in advance of Standard Time. In Bombay the first reception of the proposal was hostile; but on reconsideration the Chamber of Commerce decided in favour of it and so did the Municipality. Subsequently the opposing element in the Municipality brought in a side resolution, by which the Municipal clocks were put at Bombay time which is thirty-nine minutes behind Standard Time. On the 1st January 1906 all the railway and telegraph clocks in India were put at Indian Standard Time; in Burma the Burma Standard Time became universal. Calcutta retains its former Calcutta time; but in Bombay local time is retained only in the clocks which are maintained by the Municipality and in the establishments of some orthodox Hindus. Elsewhere Standard Time is universal.

The Calendars.

A full Calendar will be found at the beginning of this book. Below are given details of the other Calendars in use in India.

The *Jewish* Calendar is in accordance with the system arranged A.D. 358. The Calendar dates from the Creation, which is fixed as 760 years and 3 months before the beginning of the Christian Era; the year is Luni-solar.

The *Mohammedan*, or era of the Hejira, dates from the day after Mahomet's flight from Mecca, which occurred on the night of July 15, 622 A.D. The months are Lunar.

The *Fasli* year was derived from a combination of the Hejira and Samvat years by the order of Akbar; it is Luni-solar. The *Bengali* year seems also to have been related at one time to the Hejira, but the fact of its being Solar made it lose 11 days each year.

The *Samvat* era dates from 57 B.C., and is Luni-solar. The months are divided into two fortnights—*sudi*, or bright, and *badi*, or dark. Each fortnight contains 15 tithis, which furnish the dates of the civil days given in our calendars.

The Disturbances.

The disturbances, which swept over India during the year, are still in the main the subject of inquiry. The fruits of that inquiry will shortly be published. Therefore nothing more is attempted here than a bare summary of events, pending the issue of an authoritative report.

There was general uneasiness in India following the termination of the war. The rains during 1918 had failed over a wide area. Prices soared to unprecedented heights and despite all efforts to conserve and fairly distribute supplies, a mass of suffering was caused. There was also the reaction after the war, especially as the belief was general that war conditions would cease immediately hostilities closed; the measures of control necessary during the war were also little understood and resented. The atmosphere was therefore tense.

The Rowlatt Act.—In these conditions there was enacted what is called the Rowlatt Act. A strong committee, of a quasi-judicial composition, was constituted to inquire into the prevalence of anarchical crime in India and to suggest measures for its suppression. This Committee, which met under the chairmanship of Sir Sidney Rowlatt, an English judge, recommended that the Government should arm themselves with specific powers, to be put in force when sedition and anarchical crime constituted a public danger. The enactment of legislation to carry into effect these recommendations was strongly opposed throughout the country as an attack on Indian liberties. The opposition came to head when Mr. M. K. Ghandy, one of the most popular Indian publicists, placed himself at the head of what was called the Satyagraha movement, to oppose the laws thus made by acts of civil disobedience.

The Disturbances.—The public feeling thus created led to considerable disorders in Calcutta which were not suppressed until the military were called in. They extended to Delhi in March where a large mob attacked the railway station and had to be dispersed by fire. They flamed up in the Punjab. We must await the report of the Inquiry Commission before stating the special reasons for rioting in the Punjab. The chief centre of the Punjab disturbances was Amritsar. There, on April 10th two men prominently connected with the agitation, Dr. Kitchlew and Dr. Satyapal, were placed under preventive detention. The mob thereupon marched on the Civil Station and was turned back by fire. It immediately entered upon a course of arson and murder. The railway goods yard was attacked and Guard Robinson was murdered. The National Bank was fired and the Manager, Mr. Stewart, and the assistant manager, Mr.

Scott, murdered. The Chartered Bank was attacked but the officers escaped; the Alliance Bank was attacked and the manager murdered. A lady doctor, Miss Sherwood, was brutally beaten. The mob secured practical possession of the city, and on April 13th a large proclaimed meeting was held in an enclosure called the Jallianwallah Bagh. This was fired on by the military under the orders of Brigadier-General Dyer, and upwards of two thousand casualties inflicted, of whom various estimates place the killed at between three and four hundred.

The disorders spread to the Districts. The most serious outbreaks were at Lahore, where the mob had to be dispersed by fire; Gujranwalla, where there was widespread destruction of Government property; the Gujarat district and Kasur, where two warrant officers who were travelling by train were beaten to death. Martial law was proclaimed over a considerable area.

The Bombay Presidency.—Outside Delhi and the Punjab the most serious disturbances were in the Bombay Presidency. On the false news of Mr. Ghandy's arrest, the mob got out of hand in Ahmedabad, burnt a large amount of Government property and murdered a European Sergeant. Order was restored only after the military had fired. At Viramgam, north of Ahmedabad, the station buildings were burnt and an Indian revenue officer was burnt to death. The special train which was conveying troops to Ahmedabad to deal with the disorders was derailed in Kaira. In Bombay city, although the situation was anxious, no serious disorders occurred.

An Inquiry.—These events caused much discussion in India, especially when the sentence promulgated by the martial law commission in the Punjab were promulgated. There was demand for an inquiry; the Indian National Congress instituted an independent inquiry, and an official commission, consisting of Englishmen and Indians was constituted under the chairmanship of Lord Hunter. This commission commenced its inquiries in November. The evidence given before this commission in the Punjab excited a great outcry, which was reflected in Parliament when the reports of the evidence reached London. The particular points on which criticism was focussed were the heavy casualties in the Jallianwallah Bagh and the appearance of a design in some of the punishments to humiliate rather than to prevent.

The Hunter Commission completed its inquiry in March; its report is expected to be published simultaneously in India and in England in April. It has been announced that the report of the Congress inquiry will be published in March.

KNOWLES' for Pipes.

The last word in Stoneware Pipe Joints.

Cheaper than an ordinary Pipe—Why?

Because—Cost of laying drain is so much less, and can be easily and efficiently done by Native Labour in any part of the World.

AVOIDS LIPPING.

ANDREW MITCHELL & Co., LTD.,

Brown St. Factory, DUNDEE, N.B.

ESTABLISHED 1849.

On British War Office and Admiralty Lists.

Cables : "PRINCES DUNDEE."

A

fter a long run examine your Tyres

and your verdict will be one of pleasurable satisfaction—if your car is equipped with

SPENCER MOULTON Three Ribbed Tyres

Pleasure in the comfort they have yielded on good, bad, or indifferent roads.

Satisfaction in the petrol economy, they have induced—satisfaction in their splendid resistance to wear and tear, and in their quality of endurance that results in more mileage at less cost.

George Spencer Moulton & Co., Ltd.,
42-46, Wigmore Street, LONDON, W. 1.

Thresh Disinfectors

The Thresh Disinfectors are operated by current steam securing rapid evaporation and complete sterilization in minimum time.

The special Portable Disinfectors supplied to the Indian Government is only one of a range of models of Thresh machines, Fixed and Portable, Steam and Furnace Heated, which we are in a position to supply.

Sprayers

The value of Sprayers both for disinfecting purposes and for the spraying of trees and plants is now fully recognised. We can offer a comprehensive series of most efficient appliances of Knapsack and other types.

Laundry Machines

As makers of the highest quality Laundry Machinery with a long and intimate acquaintance with this class of work, we can supply complete installations or single machines to meet any requirements.

Our experience is at the service of all who may be interested, no charge being made for plans, estimates or advice.

Enquiries invited.

Summerscales, Ltd.,

Contractors to the India Office, Admiralty, War Office, etc.

The Anglo-Russian Engineering Co., LIMITED.

Specialists in all Types of
EMERY BELT GRINDERS AND SANDPAPERING MACHINES.

Suitable for Steel, Iron, Brass, Gun, Aluminium, Wood,
Veneer, Threeply, Bone, Ivory, Etc.

Size of Bands

"ARECO"

4 inches wide.
36 ins. Circumference

"MEDSANDER"

8 inches wide.
6 feet 2 ins. Circumference

"LARSANDER"

14 inches wide,
15 feet Circumference.

THE ARECO.

Let us know
your Requirements.

We will supply
the Machine.

WHEREVER A LADDER IS USED A

"JIPHEE"

LADDER PLATFORM IS REQUIRED.

Saves
Feet, Boots,
Time, Labour,
Money.

Agents
Wanted.

Mild Steel used throughout and Seasoned Wood Platforms.

Indian Motoring

SUPPLEMENT TO
The Times of India

The Indian Motoring Supplement

to "The Times of India" is the only publication of its kind in India and as such it appeals both to the Motorist and to the Agent who has Cars or Motor Cycles for Sale.

Its Literary Contents are very carefully selected and they invariably include a considerable proportion of news that is of direct interest to Motorists in India. In addition there are frequent Technical articles written by the foremost Motoring Journalists of the day.

INDIAN MOTORING

Is issued free every Wednesday as a Supplement to the Daily Edition of "The Times of India," and it may also be subscribed for separately for Eight Rupees per annum Post Free in India, Burma and Ceylon, and for Ten Rupees per annum Post Free to any other part of the World.

"THE TIMES OF INDIA" OFFICES

BOMBAY

CALCUTTA

LONDON

“India is one of the wonders of the World. Is there any field for British enterprise more likely to yield good results than India?”

SIR GEORGE HOUSTON REID

(*Ex-Prime Minister of Australia*), To “*The Times of India.*”

The trader in India regards advertisements as one of his most valuable means of obtaining useful commercial information; and the consumer finds in them a guide to the best means of satisfying his needs and desires.

For these reasons advertisements intended for publication in India cannot be made too informative, clear and concise. They will come before the notice of people who are, nearly all of them, genuinely interested in learning everything that can be told them about the goods offered for sale
